

Fantastic NSE7_SSE_AD-25 Practice Exam Online, New NSE7_SSE_AD-25 Exam Experience

NSE7_SSE_AD-25	
Number of questions:	35-40 questions
Time Limit:	75 minutes
Languages:	English
Price:	\$200 USD
Product version:	FortiSASE 25, FortiOS 7.4, FortiAuthenticator 6.5, FortiClient 7.0

P.S. Free & New NSE7_SSE_AD-25 dumps are available on Google Drive shared by ActualTestsQuiz:
<https://drive.google.com/open?id=1fExB0QxfyRU3wFs4I0rxACEb5JY5FzX>

In this rapid rhythm society, the competitions among talents are growing with each passing day, some job might ask more than one's academic knowledge it might also require the professional NSE7_SSE_AD-25 certification and so on. It can't be denied that professional certification is an efficient way for employees to show their personal Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator abilities. In order to get more chances, more and more people tend to add shining points, for example a certification to their resumes. Passing exam won't be a problem anymore as long as you are familiar with our NSE7_SSE_AD-25 Exam Material (only about 20 to 30 hours practice). High accuracy and high quality are the reasons why you should choose us.

People always feel fear of the unknown thing and cannot handle themselves with a sudden change. However, our NSE7_SSE_AD-25 exam questions can stand by your side. And we are determined to devote ourselves to serving you with the superior NSE7_SSE_AD-25 Study Materials in this career. Here are some features of our NSE7_SSE_AD-25 learning guide in our free demos which you can free download, you can understand in detail and make a choice.

Actual Fortinet NSE7_SSE_AD-25 Exam Questions In Different Formats

Through years of efforts and constant improvement, our NSE7_SSE_AD-25 study materials stand out from numerous study materials and become the top brand in the domestic and international market. Our company controls all the links of NSE7_SSE_AD-25 study materials which include the research, innovation, survey, production, sales and after-sale service strictly and strives to make every link reach the acme of perfection. Our company pays close attentions to the latest tendency among the industry and the clients' feedback about our NSE7_SSE_AD-25 Study Materials.

Fortinet NSE7_SSE_AD-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Secure Private Access (SPA): This domain includes designing SPA use cases, deploying SPA with SD-WAN, and implementing ZTNA with tagging rules and access proxy configurations.
Topic 2	<ul style="list-style-type: none">SASE architecture and integration: This domain covers integrating FortiSASE into existing networks, identifying core SASE components, and evaluating their roles in advanced deployment scenarios.
Topic 3	<ul style="list-style-type: none">SASE deployment and management: This section focuses on deploying and managing FortiSASE for branch and remote users, configuring advanced inspection features, and managing endpoint profiles and compliance rules.

- Analytics: This section covers troubleshooting connectivity and endpoint issues, analyzing dashboards and logs, and reviewing reports related to user traffic and security events.

Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which two are required to enable central management on FortiSASE? (Choose two.)

- A. FortiManager and FortiSASE registered under the same FortiCloud account.
- B. FortiSASE connector configured on FortiManager.
- C. FortiSASE central management entitlement applied to FortiManager.
- D. The FortiManager IP address in the FortiSASE central management configuration.

Answer: A,B

Explanation:

To enable central management, FortiManager must have a FortiSASE connector configured, and both FortiSASE and FortiManager must be registered under the same FortiCloud account to establish trust and synchronization.

NEW QUESTION # 45

Which authentication method overrides any other previously configured user authentication on FortiSASE?

- A. SSO
- B. Local
- C. MFA
- D. RADIUS

Answer: A

Explanation:

Comprehensive and Detailed Explanation From FortiSASE 24.x/25.x, FortiOS 7.4, FortiAuthenticator 6.5, FortiClient 7.0 and later Exact Extract study guide:

In FortiSASE environments, Single Sign-On (SSO) is prioritized as the primary enterprise authentication mechanism. According to the FortiSASE Configuration Guide and Security Operations documentation, when you configure SAML SSO (Single Sign-On), it serves as a global authentication setting that overrides any previously configured local or remote (RADIUS/LDAP) user authentication methods for the secure web gateway (SWG) and VPN tunnels.

The architectural logic is designed to ensure a seamless "Zero Trust" identity provider (IdP) experience. Once SSO is enabled and configured (typically using Azure AD, Okta, or FortiAuthenticator as the IdP), FortiSASE redirects authentication requests to the defined IdP. This effectively supersedes manual local user databases or legacy RADIUS configurations to maintain a single source of truth for identity management. While MFA is often a component of the authentication process, it is a secondary factor, whereas SSO is the foundational method that dictates the authentication flow and overrides prior settings.

NEW QUESTION # 46

Which two additional features does FortiClient integration provide with FortiSASE, when compared to secure web gateway (SWG) deployment? (Choose two.)

- A. device posture check
- B. inline-CASB protection
- C. SSL inspection
- D. vulnerability management

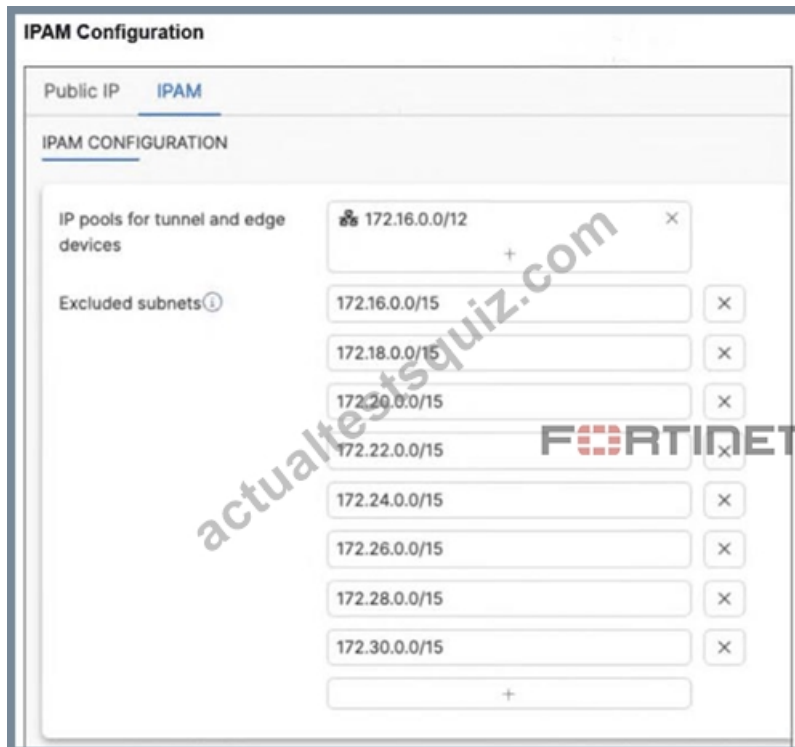

Answer: A,D

Explanation:

When FortiClient is integrated with FortiSASE, it enables vulnerability management and device posture checks, allowing for advanced endpoint compliance enforcement - capabilities not available in standalone secure web gateway (SWG) deployments.

NEW QUESTION # 47

Refer to the exhibit.

A customer wants to fine-tune network assignments on FortiSASE, so they modified the IPAM configuration as shown in the exhibit. After this configuration, the customer started having connectivity problems and noticed that devices are using excluded ranges. What could be causing the unexpected behavior and connectivity problems? (Choose two answers)

- A. The pool must include at least one /20 per security POP for the IPAM to work correctly.
- B. The customer excluded too many networks from the pool.
- C. The pool must include at least one /20 per Instance for the IPAM to work correctly.
- D. The pool must include at least one /16 per Instance for the IPAM to work correctly.

Answer: A,B

Explanation:

IP Address Management (IPAM) in FortiSASE is responsible for automatically allocating subnets to various services, including VPN tunnels and Edge devices. When an administrator modifies the default IPAM configuration, they must adhere to specific architectural scaling requirements.

* Subnet Requirements per PoP: FortiSASE architecture requires a minimum amount of address space to be available for each provisioned Security Point of Presence (PoP) to handle internal routing and endpoint assignments. For the IPAM engine to function correctly and distribute unique subnets across the global infrastructure, the pool must provide at least one /20 subnet per security PoP. If the available space is smaller than this per-PoP requirement, the allocation logic may fail or produce unpredictable routing behavior.

* Impact of Excessive Exclusions: In the exhibit (image_578940.png), the customer has defined a large summary pool of 172.16.0.0/12. However, they have configured eight separate /15 excluded subnets: 172.16.0.0/15, 172.18.0.0/15, 172.20.0.0/15, 172.22.0.0/15, 172.24.0.0/15, 172.26.0.0/15, 172.28.0.0/15, and 172.30.0.0/15.

* Calculating the Exhaustion: A /12 network contains exactly eight /15 blocks. By excluding all eight /15 ranges listed in the exhibit, the customer has effectively excluded 100% of the available addresses from the primary 172.16.0.0/12 pool.

* Connectivity Problems: When the IPAM pool is exhausted or overly restricted, FortiSASE cannot assign valid, non-overlapping subnets to the PoPs. This leads to connectivity problems for remote users and can cause the system to "fall back" to ranges it believes are available, even if they were intended to be excluded, or simply fail to establish tunnels entirely.

To resolve this, the administrator must ensure that the excluded subnets do not consume the entire pool and that the remaining unexcluded space is large enough to provide a /20 block for every active PoP in their subscription.

NEW QUESTION # 48

Refer to the exhibits.

Secure private access service connection

Name	To_FortiGate
Remote Gateway	203.221.1066
Authentication Method	<input checked="" type="radio"/> Pre-shared Key <input type="radio"/> Certificate
BGP Peer IP	10.11.11.1
Network Overlay ID	100

BGP protocol configuration

```
#config router bgp
  set as 65001
  set router-id 10.1.8.254
  config neighbor
    edit "10.10.1.3"
      set advertisement-interval 1
      set ebgp-enforce-multihop enable
      set link-down-failover enable
      set remote-as 65001
      set route-reflector-client enable
    next
  end
  config neighbor-group
    edit "To_SASE"
      set capability-graceful-restart enable
      set link-down-failover enable
      set next-hop-self enable
      set interface "To_SASE"
      set remote-as 65001
      set additional-path both
      set adv-additional-path 4
      set route-reflector-client enable
    next
  end
  config neighbor-range
    edit 1
      set prefix 10.11.11.0 255.255.255.0
      set neighbor-group "To_SASE"
    next
  end
  config network
    edit 1
      set prefix 10.190.190.0 255.255.255.0
    next
  end
```

A FortiSASE administrator is trying to configure FortiSASE as a spoke to a FortiGate hub. The VPN tunnel does not establish. Based on the provided configuration, what configuration needs to be modified to bring the tunnel up?

- A. NAT needs to be enabled in the Spoke-to-Hub firewall policy.
- B. The BGP router ID needs to match on the hub and FortiSASE.
- C. The hub needs IKEv2 enabled in the IPsec phase 1 settings.
- **D. FortiSASE spoke devices do not support mode config.**

Answer: D

Explanation:

The VPN tunnel between the FortiSASE spoke and the FortiGate hub is not establishing due to the configuration of mode config, which is not supported by FortiSASE spoke devices. Mode config is used to assign IP addresses to VPN clients dynamically, but this feature is not applicable to FortiSASE spokes.

* Mode Config in IPsec:

* The configuration snippet shows that mode config is enabled in the IPsec phase 1 settings.

* Mode config is typically used for VPN clients to dynamically receive an IP address from the VPN server, but it is not suitable for site-to-site VPN configurations involving FortiSASE spokes.

* Configuration Adjustment:

* To establish the VPN tunnel, you need to disable mode config in the IPsec phase 1 settings.

* This adjustment will allow the FortiSASE spoke to properly establish the VPN tunnel with the FortiGate hub.

* Steps to Disable Mode Config:

* Access the VPN configuration on the FortiSASE spoke.

* Edit the IPsec phase 1 settings to disable mode config.

* Ensure other settings such as pre-shared key, remote gateway, and BGP configurations are correct and consistent with the FortiGate hub.
