CRT-450 Test Duration - CRT-450 New Test Materials

Exams like the Salesforce CRT-450 exam provided by Salesforce are crucial for the advancement of your career. Candidates want to succeed on their Salesforce Certified Platform Developer I exam. For candidates to study for and successfully pass their chosen certification exam the first time, ExamsReviews provides Salesforce Certified Platform Developer I CRT-450 Exam Questions. You may use the top CRT-450 study resources from ExamsReviews to prepare for the Salesforce Certified Platform Developer I exam. Salesforce CRT-450 exam questions are a dependable and trustworthy source of training.

Salesforce Certified Platform Developer I Sample Questions (Q64-Q69):

NEW QUESTION # 64

Which two conditions cause workflow rules to fire? (Choose two.)

- A. Changing the territory assignments of accounts and opportunities
- B. An Apex Batch process that changes field values.
- C. Updating records using the bulk API
- D. Converting leads to person accounts

Answer: B,C

NEW QUESTION # 65

What should a developer use to script the deployment and unit test execution as part of continuous integration?

- A. VS Code
- B. Execute Anonymous
- C. Salesforce CLI
- D. Developer Console

Answer: C

Explanation:

Salesforce CLI allows developers to automate deployments and run unit tests as part of a continuous integration (CI) pipeline. It is the most efficient tool for scripting these processes.

Reference:Salesforce CLI

Incorrect Options:

A:VS Code is an IDE and requires CLI integration for scripting.

B:Execute Anonymous is used for running code snippets manually, not for CI.

D:Developer Console is for manual testing and debugging, not CI automation.

NEW QUESTION # 66

For which three items can a trace flag be configured?

Choose 3 answers

- A. User
- B. Process Builder
- C. Apex Trigger
- D. Apex Class
- E. Visualforce

Answer: A,C,D

NEW QUESTION # 67

Universal Containers (UC) is developing a process for their sales teams that requires all sales reps to go through a set of scripted steps with each new customer they create.

In the first steps of collecting information, UC's ERP system must be checked via a REST endpoint to see if the customer exists. If the customer exists, the data must be presented to the sales rep in Salesforce.

Which two should a developer implement to satisfy the requirements?

Choose 2 answer

- A. Invocable method
- B. Flow
- C. Future method
- D. Trigger

Answer: A,B

Explanation:

To satisfy the requirements, a developer should implement a flow and an invocable method. A flow is a declarative tool that allows you to automate business processes by collecting data and performing actions in your org or an external system¹. An invocable method is a method that can be called by a flow, a process, or another Apex method². By using a flow and an invocable method, the developer can achieve the following steps:

- * Create a flow that guides the sales rep through the scripted steps with each new customer they create¹.
- * In the flow, use an Apex action to invoke an invocable method that calls the REST endpoint of UC's ERP system and passes the customer information as a parameter^{2,3}.
- * In the invocable method, use the HttpRequest and HttpResponse classes to send a GET request to the REST endpoint and receive a response that contains the customer data⁴.
- * In the invocable method, parse the response body and return the customer data as an output parameter to the flow⁴.
- * In the flow, use a screen element to display the customer data to the sales rep if the customer exists in the ERP system¹.

Using a future method or a trigger are not effective ways to satisfy the requirements. A future method is a method that runs in the background, asynchronously, after the current transaction finishes⁵. A trigger is a piece of Apex code that executes before or after a record is inserted, updated, deleted, or undeleted. Neither of these options can interact with the flow or the sales rep, and they are not suitable for calling a REST endpoint that requires a synchronous response⁵. NEW QUESTION # 68

Universal Containers wants to back up all of the data and attachments in its Salesforce org once a month. Which approach should a developer use to meet this requirement?

- A. Use the Data Loader command line.
- B. Define a Data Export scheduled job.
- C. Schedule a report.
- D. Create a Schedulable Apex class.

Answer: B

NEW QUESTION # 69

.....

If you feel nervous about your exam, then our CRT-450 exam materials will be your best choice. CRT-450 Soft test engine can stimulate the real exam environment, so that your confidence for your exam will be strengthened. In addition, we provided you with free demo to have a try before buying CRT-450 Exam Cram. You can enjoy free update for one year, so that you can obtain the latest version timely, and the latest version for CRT-450 training materials will be sent to your email automatically. You just need to check your email.
