Palo Alto Networks XSOAR-Engineer Exam Success Tips For Passing Your Exam on the First Try

We've always put quality of our XSOAR-Engineer study guide on top priority. We don't strongly chase for the number of products

we have manufactured. Each XSOAR-Engineer test engine will go through strict inspection from many aspects such as the operation, compatibility test and so on. Also, we have final random sampling survey before we sale our XSOAR-Engineer practice material to our customers. The quality inspection process is completely strict. The most professional experts of our company will check the study guide and deal with the wrong parts. What you have bought will totally have no problem. That is why we can survive in the market now. Our company is dedicated to carrying out the best quality XSOAR-Engineer Test Engine. Any small mistake is intolerant. You can buy our products at ease.

Palo Alto Networks XSOAR Engineer Sample Questions (Q158-Q163):

NEW QUESTION # 158

In a Dev/Prod deployment model, what is available only in the development tenant?.

- A. Marketplace.
- B. Content Repository page.
- C. Custom integration instances.
- D. "Export all custom content" feature.

Answer: D

Explanation:

In Cortex XSOAR's documented Dev/Prod deployment model, the development tenant is designed to be the workspace where engineers create, modify, test, and validate content before promoting it into production. As part of this workflow, the development tenant includes the "Export all custom content" feature, which generates a structured content bundle containing custom playbooks, integrations, fields, layouts, lists, and other artifacts. This bundle is then imported into the production tenant to ensure controlled, versioned, and tested promotion of content.

The Admin Guide highlights that this export capability is restricted to the development environment to preserve the integrity and stability of the production tenant. Production systems are intentionally limited, allowing only the import (not export) of custom content to prevent accidental overwriting, drift, or unintended modifications.

Marketplace access (A) exists in both tenants. Custom integration instances (C) can be created in either tenant. The Content Repository page (B) is also available across both environments.

Therefore, the only feature exclusive to the development tenant is D: "Export all custom content." This ensures a safe, repeatable Dev/Prod promotion model aligned with enterprise change-control requirements.

NEW QUESTION # 159

When creating a new tab in the layout, which section cannot be added?

- A. War room entries picked by entry query
- B. Related incidents
- C. Incident team members
- D. Retrieve widget chart based on script

Answer: B

Explanation:

<https://docs-cortex.paloaltonetworks.com/r/Cortex-XSOAR/6.6/Cortex-XSOAR-Administrator-Guide/Customize-Incident-Layouts>

NEW QUESTION # 160

A temporary integration issue causes a scheduled job to fail continuously.

Which action will ensure the job continues to run after future failures?.

- A. Edit Queue Handling settings of the job.
- B. Adjust the Role-Based Access Control (RBAC) of the incident type.
- C. Ensure the last playbook task runs closeInvestigation.
- D. Verify that the "Continue on Error" box is checked in the job.

Answer: D

Explanation:

Jobs in XSOAR run playbooks or scripts automatically at scheduled intervals. According to the Job Execution section of the Admin Guide, if a job encounters an error during playbook execution, its continued operation depends on whether "Continue on Error" is enabled. When this checkbox is selected, the job will not terminate due to an exception or integration failure. Instead, it logs the error and proceeds to the next scheduled execution as normal.

Queue handling settings (A) apply to indicators/job queues within feeds, not job failure behavior. RBAC changes (C) do not influence job execution continuity. Ensuring the last task closes the investigation (D) is unrelated and may even disrupt job workflows, since jobs often do not require incident-based models.

By contrast, enabling Continue on Error is the documented mechanism that prevents scheduled jobs from halting due to transient or recurring errors. It ensures operational resilience, especially during integration outages or API rate limits.

Thus, option B is the correct and fully documented answer.

NEW QUESTION # 161

Which two reasons would lead an engineer to create a custom widget? (Choose two.)

- A. To visualize XSOAR list data
- **B. To visualize a custom query**
- C. To visualize server configuration keys
- D. To visualize complex incident data calculations
- **E. To visualize context data**

Answer: B,E

Explanation:
