# Preparing for Microsoft MB-820 Exam is Easy with Our The Best MB-820 New Real Exam: Microsoft Dynamics 365 Business Central Developer

In the world of industry, MB-820 certification is the key to a successful career. If you have achieved credential such as MB-820 then it means a bright future is waiting for you. Avail the opportunity of MB-820 dump at VCEDumps.com that helps you in achieving good scores in the exam. Due to these innovative methodologies students get help online. The MB-820 Exam Questions Answers PDF is very effective and greatly helpful in increasing the skills of students. They can easily cover the exam topics with more practice due to the unique set of MB-820 exam dump. The MB-820 certification learning is getting popular with the passage of time.

# Microsoft Dynamics 365 Business Central Developer Sample Questions (Q12-Q17):

NEW QUESTION # 12
A company plans to customize its per tenant extension reports. The company has the following requirements for the customization:
* Child data items must not be displayed on the request page for some master detail reports.
* Selecting key filter fields takes users too much time. The customization must decrease the amount of time to select the fields.
You need to optimize the report request page.
Which actions should you configure? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:
Explanation:
1. Child data items... must not be displayed:
* Selection: Set the DataItemTableView sorting property.
* Reasoning: In Business Central reports, a FastTab (filter tab) is automatically generated for every data item on the request page. To hide a specific data item's tab, you must ensure two things: no RequestFilterFields are defined for it, and you must set the DataItemTableView property (specifically the sorting key). Simply linking the data item (via DataItemLinkReference) does not automatically hide the tab; it just defines the data relationship.
2. Decrease the amount of time to select filter fields:
* Selection: Specify the RequestFilterFields property.
* Reasoning: The RequestFilterFields property allows you to pre-define which fields appear on the request page immediately when the report opens. This eliminates the need for users to manually click
"Add Filter" and search for the field, thus decreasing selection time.

NEW QUESTION # 13
You create an 'AddItemsToJson' procedure and publish it.
The procedure fails to run.
You need to fix the errors in the code.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.

**Answer:**

Explanation:

**NEW QUESTION # 14**

You have a per tenant extension that contains the following code.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

**NEW QUESTION # 15**

A company is deploying Business Central on-premises.

The company plans to use a single-tenant deployment architecture.

You need to describe how the data is stored and how the Business Central Server is configured.

In which two ways should you describe the single-tenant architecture? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Multiple customers share multiple Business Central Server instances.
- B. The application and the business data are stored in the same database.
- C. Each customer has their own Business Central Server.
- D. The application and business data are stored in separate databases.
- E. Multiple customers share a single Business Central Server.

**Answer: B,D**

Explanation:

In a single-tenant deployment architecture of Business Central on-premises, the following characteristics describe how the data is stored and how the Business Central Server is configured:

The application and the business data are stored in the same database (B): In a single-tenant architecture, each tenant (which typically corresponds to a single customer) has its own dedicated database. This database contains both the application objects (such as pages, reports, codeunits, etc.) and the business data (such as customer, vendor, and transaction records). This setup ensures that each tenant's data is isolated and can be managed independently.

The application and business data are stored in separate databases (D): While (B) is a characteristic of a single-tenant deployment, it's important to clarify that in some configurations, the application objects can be stored in a separate database from the business data. This approach can be used for easier maintenance and upgrades of the application code without affecting the business data. However, each tenant still has its own set of databases, maintaining the single-tenancy model.

**NEW QUESTION # 16**

You need to define the XML file properties for the accounting department.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

**NEW QUESTION # 17**

......
