According to SAFe, which of the following metrics are reported at the Inspect and Adapt event?

- A. Cumulative value rate
- B. ART cycle velocity
- C. ART predictability measure
- D. Cumulative value measure

**Answer: C**

Explanation:

According to the SAFe 6 Scrum Master documentation, one of the metrics that are reported at the Inspect and Adapt event is the ART predictability measure. This metric shows how well the ART delivers on its PI objectives, which are the SMART commitments made by the teams during PI planning. The ART predictability measure is calculated by dividing the total actual business value achieved by the total planned business value, as shown in the PI system demo. The ART predictability measure helps the ART to assess its performance, identify gaps, and improve its forecasting accuracy and reliability. One way a Scrum Master/Team Coach can support productive team Backlog Refinement sessions is to ensure subject matter experts are invited. Subject matter experts (SMEs) are people who have specialized knowledge or skills related to the domain or technical aspects of the product or solution. They can provide valuable input and feedback to the team during Backlog Refinement, such as clarifying requirements, validating assumptions, identifying dependencies, and suggesting solutions. SMEs can also help the team to split, estimate, and prioritize the backlog items more effectively and accurately. By inviting SMEs to the Backlog Refinement sessions, the Scrum Master/Team Coach can facilitate better collaboration, communication, and alignment among the team and the stakeholders.
