

Latest TPAD01 Guide Files, TPAD01 Exam Sample Questions

SAMPLE FINAL EXAM QUESTIONS 2020

Theory - 10 questions (Final Exam will have 20 question)

Q1. We have developed a regression model: $\text{Rent} = b_0 + b_1 * \text{House_WithPool}$ where House_WithPool is a dummy variable set to 1 if a house has a Pool and is set to 0 otherwise. The Regression summary output is

	Estimate	S.E.	t Value	Pr> t
Intercept	1542.149	2.354	12.50***	<.001
House_WithPool	253.666	3.123	11.42***	<.001

What is the average rent of a house with Pool given the summary output?

- 1542.149
- 1795.815
- 1288.483
- 253.666

Answer: B

Q2. Why do we use Log-Transformations when we perform transformation of variables?

- To achieve a more linear relationship
- To make a distribution more normal
- To make the variance more constant
- All the above

Solution: D) A, B and C are the objectives of performing Log Transformations

Q3. What is the relation between Correlation and Covariance

$$\text{Correlation} = \frac{\text{Cov}(x, y)}{\sigma_x * \sigma_y}$$

Q4. Which of the following statement is correct regarding the "size effect"?

- Size effect means smaller firms have higher returns than larger firms on average
- Stocks with high market capitalization generate returns greater than stocks with low market capitalization
- Stocks with low book to market ratio tend to outperform high book to market ratio stocks
- Firms that invest more will have a higher stock price

Solution A: (Week 8 Lesson 1)

Q5. Which of the following is not Fama-French factor?

- Value
- Size
- Momentum
- Market

Answer: C) Fama-French factors include market, size, value factors and others.

Great concentrative progress has been made by our company, who aims at further cooperation with our candidates in the way of using our TPAD01 exam engine as their study tool. Owing to the devotion of our professional research team and responsible working staff, our training materials have received wide recognition and now, with more people joining in the TPAD01 Exam army, we has become the top-raking TPAD01 training materials provider in the international market. Believe in our TPAD01 study guide, you will succeed in your exam!

Proofpoint TPAD01 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Email Firewall: Covers creating and managing mail rules, controlling SMTP rate, configuring outbound throttling, and strengthening overall email security.
Topic 2	<ul style="list-style-type: none"> Email Authentication: Covers configuring SPF, DKIM, and DMARC policies, and setting up email authentication keys.
Topic 3	<ul style="list-style-type: none"> User Management: Covers syncing Active Directory, importing profiles, configuring LDAP SSO, and managing user roles and access permissions.

Topic 4	<ul style="list-style-type: none"> • Threat Response: Covers differentiating cloud versus on-premises defense, configuring servers and workflows, and managing the threat response process.
Topic 5	<ul style="list-style-type: none"> • Spam Detection: Covers tuning spam management policies, creating custom spam rules, and configuring safe and block lists.
Topic 6	<ul style="list-style-type: none"> • Virus Protection: Covers configuring virus protection policies, restricting message processing, and editing related rules.
Topic 7	<ul style="list-style-type: none"> • Targeted Attack Protection (TAP): Covers managing URL rewriting, configuring Message Defense, and using the TAP Dashboard to monitor advanced threats.
Topic 8	<ul style="list-style-type: none"> • Smart Search & Logging: Covers using Smart Search, analyzing logs, configuring syslogs, and leveraging the PoD API for operational insights.
Topic 9	<ul style="list-style-type: none"> • Quarantine: Covers managing quarantine folders, configuring settings, releasing messages, and understanding rule precedence.
Topic 10	<ul style="list-style-type: none"> • Product Overview: Covers key product functionalities and how Proofpoint's components integrate within the overall email security suite.

TPAD01 Prep Training - TPAD01 Study Guide & TPAD01 Test Pdf

A good brand is not a cheap product, but a brand that goes well beyond its users' expectations. The value of a brand is that the TPAD01 study materials are more than just exam preparation tool -- it should be part of our lives, into our daily lives. Do this, therefore, our TPAD01 Study Materials has become the industry well-known brands, but even so, we have never stopped the pace of progress, we have been constantly updated the TPAD01 study materials.

Proofpoint Threat Protection Administrator Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34

What does the default exestrip rule do?

- A. Deletes the listed attachments from the message and continues processing
- B. Sends the message to the Message Defense module
- C. Quarantines the message and notifies the receiver that it has been quarantined
- D. Deletes messages with executable attachments

Answer: A

Explanation:

The correct answer is C. Deletes the listed attachments from the message and continues processing . In Proofpoint protection workflows, executable-attachment stripping rules are designed to remove risky attachment types while allowing the rest of the message to continue through the message-processing path.

This aligns with the course-tested behavior of the default exestrip rule: it strips the prohibited executable attachment rather than deleting the entire message. Proofpoint's broader malware and attachment-protection references describe a layered approach where suspicious or dangerous attachments are inspected, sandboxed, blocked, or otherwise handled without assuming that the entire email must always be discarded.

That distinction matters operationally. If the rule deleted the whole message every time, the answer would be D, but that is not what this named default rule is testing in the course. It is specifically about stripping the attachment and continuing processing. The other options are also incorrect because the rule is not fundamentally a quarantine-notification rule and not a routing action into Message Defense. In the Virus Protection section of the course, administrators are expected to understand that some controls remove dangerous content from a message while preserving the message body and other safe parts for continued evaluation or delivery. Therefore, the verified and course-aligned answer is C .

NEW QUESTION # 35

When reviewing the Audit Logs in the context of cluster monitoring, what type of information is primarily available?

- A. Records of administrator access and changes made to cluster settings
- B. Detailed system faults and warning messages from cluster operations
- C. Alerts triggered by excessive use of cluster resources or capacity limits
- D. Live performance statistics and current status of cluster node workloads

Answer: A

Explanation:

The correct answer is D. Records of administrator access and changes made to cluster settings . In Proofpoint administration, audit logs are intended to record who accessed administrative functions and what configuration changes were made. That is the core purpose of auditing in management systems: preserve an accountable record of administrative actions rather than provide live telemetry or capacity-monitoring views.

Proofpoint course material and documentation consistently distinguish message or operational logs from administrative audit data, and the audit-focused content is about tracking changes and access rather than system performance.

This makes the other options poor fits. Live performance statistics belong to monitoring dashboards and node- status views.

Capacity or threshold alerts are part of alerting systems, not the primary contents of audit logs.

Detailed system faults and warnings are closer to operational or system logs. Audit logs are about traceability and accountability: who logged in, who changed settings, and what administrative actions occurred. In the Threat Protection Administrator course, this distinction matters because troubleshooting message flow and reviewing admin change history require looking in different places. Administrators use audit logs to answer questions like "Who disabled this rule?" or "When was this setting changed?" rather than to inspect current node load or error counters.

Therefore, the course-aligned answer is D because Audit Logs primarily contain records of administrator access and configuration changes .

NEW QUESTION # 36

A SAML authentication profile is configured on the Proofpoint Protection Server console. Which portals can be accessed using this configuration?

- A. TAP Dashboard and Cloud Threat Response
- B. PPS Console and End User Web
- C. End User Web and Email Continuity
- D. PPS Console and Cloud Admin

Answer: B

Explanation:

The correct answer is A. PPS Console and End User Web. Proofpoint's PPS/PoD IdP integration guidance states that administrators can enable SAML authentication for Administrators and/or End Users on the Protection Server. That directly maps to access for the PPS Console and the End User Web experience, which is exactly what this question asks.

This is an important distinction because the SAML authentication profile configured in the Protection Server console is tied to the Protection Server's own administrative and end-user login surfaces, not to every Proofpoint cloud product universally. TAP Dashboard and Cloud Threat Response have their own cloud- service authentication context, and Cloud Admin is not the answer associated with the PPS-console SAML profile in the course material. The course expects students to separate PoD/PPS authentication behavior from broader Proofpoint cloud identity workflows.

In the Threat Protection Administrator course, this question appears in the User Management area because it tests whether the administrator understands where a SAML profile configured on the Protection Server actually applies. Since the official integration guide explicitly mentions enabling SAML for admins and end users on PPS, the verified answer is A. PPS Console and End User Web.

NEW QUESTION # 37

Can a new email digest be generated for every email which enters quarantine?

- A. No, the digest is generated by schedule, or manually.
- B. No, it can only send daily summaries.

- C. Yes, it can be configured to send immediate notifications.
- D. Yes, it can send notifications based on user preferences.

Answer: A

Explanation:

The correct answer is D. No, the digest is generated by schedule, or manually. Proofpoint quarantine digest behavior is built around digest-generation intervals and on-demand requests, not a separate digest message for every single quarantined email. Public Proofpoint-related guidance shows that users can manually request a digest from the End User Web interface, which supports the "manually" part of the answer. Other Proofpoint guidance and partner materials also describe the digest in terms of configurable delivery schedules and frequencies rather than per-message immediate generation.

This matches the course intent. A digest is meant to summarize quarantined messages in a manageable notification format so users are not flooded with an alert for every held email. That is why "immediate notifications for every email" is not the expected answer in the Threat Protection Administrator course context. Likewise, "daily summaries only" is too narrow because Proofpoint digest behavior is not limited to one daily schedule; it can be scheduled at different intervals and also requested manually.

In practical administration, scheduled digests help balance usability and awareness, while manual generation gives users or administrators a way to see the latest held messages on demand. Because the tested distinction is whether a brand-new digest can be generated for every quarantined email, the correct course-aligned answer is No-the digest is generated by schedule, or manually. Therefore, the verified answer is D.

NEW QUESTION # 38

You can drag the divider between the question and exhibit to the left to make the image larger.

Refer to the exhibit.

You are configuring SSO for Proofpoint Cloud Services, such as Cloud Admin, TAP Dashboard, Cloud Threat Response, CASB, and Identity Threat Response. The Microsoft O365 administrator sends you a portion of the XML file containing the SAML configuration. Which of the following strings should be entered in the "SAML Login Endpoint (required)" field in the Proofpoint Identity Provider Configuration?

□

- A. <https://enduserauth.proofpoint.com/v1/token/samlauthorization>
- B. <https://login.microsoftonline.com/5301fc22-de2d-3e32-8e25-37a292782d2c/saml2>
- C. SingleSignOnService Binding="urn:oasis:names:tc:SAML:2.0:Binding:HTTP-Redirect"
- D. The data between < X509Certificate > and < /X509Certificate >

Answer: B

Explanation:

The correct answer is C. <https://login.microsoftonline.com/5301fc22-de2d-3e32-8e25-37a292782d2c/saml2>

The question is asking specifically for the value that should be entered in the "SAML Login Endpoint (required)" field in Proofpoint's Identity Provider configuration. In SAML metadata, that value is the Location attribute of the SingleSignOnService entry. In the exhibit, the XML clearly shows the Microsoft login URL as:

<https://login.microsoftonline.com/5301fc22-de2d-3e32-8e25-37a292782d2c/saml2> That is the actual SAML login endpoint Proofpoint needs in order to redirect authentication requests to the Microsoft identity provider.

Why the other options are incorrect:

- * A is the certificate content, which is used for trust and signature validation, not for the login endpoint.
- * B is the XML element label and binding description, not the actual URL value that belongs in the field.
- * D is a Proofpoint URL and not the Microsoft IdP SAML login endpoint shown in the metadata.

This is a User Management and federated-authentication question because it focuses on SSO configuration between Proofpoint Cloud Services and Microsoft O365 / Azure AD. The main concept being tested is knowing how to read SAML metadata correctly and extract the exact SingleSignOnService Location value.

So the complete interpretation of the exhibit is that the string to enter in the "SAML Login Endpoint (required)" field is the Microsoft SAML login URL shown in the XML, which makes Answer C the verified course-aligned choice.

NEW QUESTION # 39

.....

In today's fast-paced world, having access to Threat Protection Administrator Exam (TPAD01) study material on the go is important. ExamPrepAway Threat Protection Administrator Exam (TPAD01) PDF questions are compatible with all smart devices,

allowing you to study and prepare for the TPAD01 Exam whenever and wherever you choose. Since you can access real Proofpoint TPAD01 dumps in PDF from your smartphone or tablet, you can easily fit TPAD01 exam preparation into your busy schedule.
