질문 # 23

What is a key feature of SAP BTP's AI capabilities?

- A. AI processing without cloud-based analytics support.
- B. Limited AI functionalities restricted to specific SAP modules.
- C. Rule-based decision-making without machine learning.
- D. Automated decision-making with machine learning models.

정답: D

설명:

SAP BTP's approach to Artificial Intelligence is centered on the concept of "Business AI," which means AI is built specifically for business contexts and is deeply embedded within the SAP applications users use every day. A key feature of this capability is automated decision-making with machine learning (ML) models.

Unlike traditional rule-based systems that follow rigid "if-then" logic, ML models within BTP can analyze vast amounts of historical data to identify patterns and predict future outcomes. This allows the platform to provide recommendations, such as identifying the best supplier based on past performance or flagging potentially fraudulent financial transactions.

The AI Foundation on SAP BTP provides developers with ready-to-use services and tools to build, run, and manage AI-led extensions. This includes access to Large Language Models (LLMs) and specialized machine learning services that are pre-trained on business data. By positioning AI as a core component of BTP, SAP ensures that intelligence is not an afterthought but a central part of the business process. This enables a shift from reactive data entry to proactive, data-driven management. Furthermore, these AI capabilities are tightly integrated with SAP Analytics Cloud, ensuring that the insights generated by machine learning models are immediately actionable through intuitive visualizations and dashboards, thereby driving the digital transformation of the SAP Business Suite.

질문 # 24

Which SAP BTP service plays a key role in integrating finance-related processes across enterprise systems?

- A. SAP Business Network
- B. SAP Integration Suite
- C. SAP Conversational AI
- D. SAP Ariba

정답: B

설명:

In the modern enterprise, financial processes rarely exist in a vacuum; they often require data from procurement, sales, payroll, and external banking institutions. SAP Integration Suite is the essential service on SAP BTP that facilitates this cross-system connectivity. It acts as an Integration Platform-as-a-Service (iPaaS) that enables the seamless flow of financial data between the SAP S/4HANA core and other third-party or legacy systems. By utilizing pre-built integration flows and specialized adapters, organizations can automate complex financial tasks such as bank statement processing, tax reporting across different jurisdictions, and real-time payment reconciliations.

The strategic positioning of the Integration Suite within the finance domain is to eliminate "data islands." When financial data is siloed, it leads to delays in closing the books and increases the risk of manual errors.

By using SAP Integration Suite, businesses can ensure that every financial transaction—regardless of where it originates—is reflected accurately in the central ledger. This real-time synchronization is critical for maintaining compliance and providing the CFO's office with an accurate, up-to-the-minute view of the company's financial health. While SAP Ariba and SAP Business Network handle specific transactional interactions, they rely on the underlying Integration Suite to pass that data back into the core financial systems.

질문 # 25

How does SAP BTP support predictive analytics in business decision-making?

Note: There are 3 correct answers to this question.

- A. By automating data visualization.
- B. By using SAP Data Intelligence for real-time insights.
- C. By requiring only manual data input.
- D. By leveraging AI and machine learning models.

- E. By restricting analytics to financial data.

정답: A,B,D

설명:

SAP BTP provides a comprehensive ecosystem for predictive analytics, moving business decision-making from a reactive to a proactive state. This is achieved through three primary mechanisms. First, by leveraging AI and machine learning models (Option A), BTP services like SAP AI Core allow developers to train models on historical business data to predict future trends, such as customer churn or equipment failure.

Second, the platform automates data visualization (Option B) through SAP Analytics Cloud. This ensures that complex predictive insights are presented in an intuitive, dashboard-driven format that business leaders can easily interpret and act upon, rather than sifting through raw spreadsheets.

Third, the platform utilizes SAP Data Intelligence for real-time insights (Option D). This component orchestrates data from across diverse sources-both SAP and non-SAP-ensuring that the predictive models are fed with the most current and relevant information. By integrating these three pillars-intelligence (AI

/ML), visualization (Analytics), and orchestration (Data Intelligence)-SAP BTP transforms the SAP Business Suite into a forward-looking enterprise system. This allows organizations to anticipate market shifts, optimize their supply chains, and personalize customer interactions with a level of precision that was previously impossible, ultimately driving better business outcomes and long-term sustainability.

질문 # 26

Why is SAP BTP considered a strategic platform for digital transformation?

- A. It allows enterprises to move all workloads to SAP on-premise solutions.
- B. It eliminates the need for external data management solutions.
- **C. It centralizes integration, automation, and data-driven decision-making.**
- D. It provides a one-size-fits-all solution without customization options.

정답: C

설명:

SAP BTP is the strategic foundation for the "Intelligent, Sustainable Enterprise." Its primary value lies in its ability to centralize integration, automation, and data-driven decision-making into a single, unified platform. In a modern IT landscape, data is often fragmented across multiple cloud and on-premise systems.

BTP acts as the unified technical layer that breaks down these silos. By providing a common set of services for data management (SAP HANA Cloud), analytics (SAP Analytics Cloud), and integration (SAP Integration Suite), BTP ensures that business leaders have a holistic view of their operations.

Digital transformation requires more than just moving to the cloud; it requires the ability to innovate quickly.

BTP's strategic positioning allows businesses to extend their core SAP applications (like S/4HANA) using side-by-side extensions. This keeps the "core" clean and stable while allowing for rapid innovation at the edge. Furthermore, the platform's automation capabilities (like SAP Build Process Automation) enable companies to optimize their workflows, reducing manual effort and increasing accuracy. By choosing BTP, enterprises are not just buying a set of tools; they are adopting a platform strategy that supports continuous improvement and agility, ensuring they can adapt to market changes more effectively than they could with fragmented, legacy architectures.

질문 # 27

Which of the following are key products of SAP Business Technology Platform (SAP BTP)? (Choose two).

- A. SAP SuccessFactors
- **B. SAP Integration Suite**
- **C. SAP HANA Cloud**
- D. SAP Ariba

정답: B,C

설명:

SAP Business Technology Platform (SAP BTP) is organized into four primary functional pillars: Database and Data Management, Analytics, Application Development and Integration, and Intelligent Technologies.

SAP HANA Cloud serves as the foundation of the Database and Data Management pillar, providing a single, integrated

powerhouse for all enterprise data. It offers the speed of in-memory processing combined with the scalability of the cloud, allowing businesses to manage large volumes of data while providing a "single source of truth." On the other hand, SAP Integration Suite is the cornerstone of the Integration pillar. It is an integration platform-as-a-service (iPaaS) that allows organizations to seamlessly connect SAP and non-SAP applications, whether they reside on-premise or in the cloud. It provides pre-built content and connectors that significantly reduce the complexity of landscape orchestration. In contrast, SAP Ariba and SAP SuccessFactors are specialized Software-as-a-Service (SaaS) applications. While they are part of the broader SAP ecosystem and often run on or integrate via BTP, they are considered line-of-business (LoB) solutions rather than core components of the technology platform itself. Understanding this distinction is vital for positioning BTP as the underlying "glue" that enables the "Intelligent Enterprise" strategy by providing the technical tools necessary to extend and integrate these LoB applications.
