Sample Questions (Q28-Q33):

NEW QUESTION # 28

Question:

What is the role of the storage node in a backup architecture?

- A. To perform data deduplication and compression
- **B. To organize and write data to the backup device**
- C. To manage the backup
- D. To monitor the health of the backup infrastructure

Answer: B

Explanation:

A storage node is a component in a backup architecture that handles the actual data movement during the backup process:

It organizes the backup data stream.

It writes the data to the backup target (disk, tape, or cloud).

It does not manage policies or schedules (that's the role of the backup server or management console).

* Option A: Monitoring is done by the backup server or management tools.

* Option C: Backup management (scheduling, policies) is also handled by the backup server.

* Option D: Deduplication may be part of the process but is not the primary role of a storage node.

NEW QUESTION # 29

Question:

Which layer of the OSI reference model provides logical end-to-end connections, sequencing, and integrity?

- A. Session
- B. Presentation
- **C. Transport**
- D. Data Link

Answer: C

Explanation:

The Transport layer (Layer 4) of the OSI model ensures reliable data transfer between systems by providing:

End-to-end connections- manages communication sessions

Sequencing- orders data packets

Integrity- error detection and correction

* Session (Layer 5): Manages sessions and controls dialogues between systems.

* Data Link (Layer 2): Deals with local network frame delivery.

* Presentation (Layer 6): Translates data formats (like encryption, compression).

NEW QUESTION # 30

Question:

A company wants to implement a security strategy that uses firewall, VPN, malware protection, and encryption. Which approach is most suitable for achieving this goal?

- A. Zero trust security
- **B. Defense-in-depth**
- C. DMZ
- D. Perimeter security

Answer: B

Explanation:

Defense-in-depth is a security strategy that layers multiple security controls throughout the IT environment to protect data and infrastructure.

- * Firewalls (network layer)
- * VPN (secure remote access)
- * Malware protection (endpoint and gateway)
- * Encryption (data in transit and at rest)

This approach reduces reliance on a single security measure and strengthens overall protection.

- * Zero trust: Focuses on continuously validating trust.
- * DMZ: Network architecture, not a full security approach.
- * Perimeter security: Limited to the outer edge of the network.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Security Frameworks and Approaches.

NEW QUESTION # 31

Question:

What is a key advantage of cloning a VM?

- A. Ability to run new VMs simultaneously with the same IP address
- B. Improves the performance of existing and new VMs
- C. Eliminates the need to create multiple snapshots for a VM
- **D. Saves time when creating multiple identical copies of a VM**

Answer: D

Explanation:

VM cloning allows administrators to create exact copies of a virtual machine quickly.

Saves time compared to manually configuring new VMs.

Useful for testing, development, and scaling environments.

Each clone can be independently modified after creation.

* Same IP address is typically not the case (clones get unique addresses).

* Snapshots provide rollback points, not full VM clones.

* Performance does not improve because of cloning itself.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: Virtualization and Cloning Benefits.

NEW QUESTION # 32

Question:

What is the first step in a machine learning process?

- A. Training the model
- B. Analyzing the data
- **C. Collecting the datasets**
- D. Selecting the type of learning

Answer: C

Explanation:

Collecting the datasets is the first step in any machine learning (ML) process. Without data, the ML system cannot function. Steps include:

1##Collecting datasets: Gathering data relevant to the problem to train and validate the ML model.

2##Analyzing data: Cleaning and exploring data for patterns.

3##Selecting learning type: Deciding between supervised, unsupervised, or reinforcement learning.

4##Training the model: Using the data to build predictive models.
