NEW QUESTION # 418

Refer to the exhibit.

□ A network engineer must improve the fabric discovery process in a data center. The engineer wants to check current ACI scripts in the myproject repository and clone them to a folder named aci. The engineer will optimize the scripts from the new folder. Which command performs this task on the Git repository?

- A. □
- B. □
- C. □
- D. □

Answer: B

Explanation:

To clone the "myproject" repository from GitHub into a new folder named "aci" for optimization, the correct command is:

```
git clone git@github.com:myproject aci
```

This command specifies the SSH URL of the repository (git@github.com

) and sets the target directory to "aci." The git clone command copies the repository to the local machine, creating a new directory named "aci" where the repository's contents will be placed.

GitHub SSH Setup

NEW QUESTION # 419

Which mechanism is used to consume a RESTful API design when large amounts of data are returned?

- A. Data sets
- B. Scrolling
- C. **Pagination**
- D. Blobs

Answer: C

Explanation:

When consuming a RESTful API that returns large amounts of data, pagination is commonly used to divide the data into manageable chunks. Pagination helps reduce the load on the server and the client by providing only a subset of the total data in each response. The client can request the next set of data using parameters such as page or limit.
