

UiPath-ADPv1試験の準備方法 | 素晴らしいUiPath-ADPv1試験概要試験 | 一番優秀なUiPath (ADPv1) Automation Developer Professional復習内容

2026年It-Passportsの最新UiPath-ADPv1 PDFダンプおよびUiPath-ADPv1試験エンジンの無料共有: <https://drive.google.com/open?id=130FDva8IF1VMpnsV0GqlpSsgSfwhBKUj>

It-PassportsクライアントにUiPath-ADPv1学習資料の3つのバージョンを提供し、PDFバージョン、PCバージョン、APPオンラインバージョンが含まれます。異なるバージョンは、独自の利点とメソッドの使用を後押しします。UiPath-ADPv1試験トレントの内容は同じですが、クライアントごとに異なるバージョンが適しています。たとえば、PCバージョンのUiPath-ADPv1学習教材は、Windowsシステムを搭載したコンピューターをサポートします。UiPathその利点には、UiPath (ADPv1) Automation Developer Professional実際の操作試験環境をシミュレートし、試験をシミュレートでき、期間限定試験に参加できることです。そして、バージョンが何であれ、ユーザーは自分の喜びでUiPath-ADPv1ガイドUiPath (ADPv1) Automation Developer Professional急流を学ぶことができます。タイトルと回答は同じであり、コンピューターまたは携帯電話またはラップトップで製品を使用できます。

UiPath UiPath-ADPv1 認定試験の出題範囲:

トピック	出題範囲
トピック 1	• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.

トピック 2	• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.
トピック 3	• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.
トピック 4	• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.

UiPath-ADPv1復習内容 & UiPath-ADPv1日本語認定

IT業種で仕事している皆さんが現在最も受験したい認定試験はUiPathの認定試験のようですね。広く認証されている認証試験として、UiPathの試験はますます人気があるようになっていきます。その中で、UiPath-ADPv1認定試験が最も重要な一つです。この試験の認定資格はあなたが高い技能を身につけていることも証明できます。しかし、試験の大切さと同じ、この試験も非常に難しいです。試験に合格するのは少し大変ですが、心配しないでくださいよ。It-PassportsはUiPath-ADPv1認定試験に合格することを助けてあげますから。

UiPath (ADPv1) Automation Developer Professional 認定 UiPath-ADPv1 試験問題 (Q165-Q170):

質問 # 165

What is the default polling interval set for an event trigger?

- A. 5 minutes
- B. 10 minutes
- C. 1 minute
- D. 15 minutes

正解: A

質問 # 166

What is the purpose of credential stores in UiPath Orchestrator?

- A. To securely store sensitive data such as Robot credentials and Credential Assets for use in automation processes.
- B. To serve as a centralized location for storing pre-built automation workflows and processes.
- C. To store Orchestrator event logs and related data for auditing purposes.
- D. To store non-sensitive data and configuration settings for UiPath Studio projects.

正解: A

質問 # 167

A developer needs to create a repetitive process in the REFramework. Following the best practices, which action(s) should be performed to defend against potential robot crashes such as "out of memory"?

- A. Build a script that compares current CPU usage values to a threshold and clears data as needed.
- B. After every transaction, clear the transaction data, close the applications, and re-open the applications.
- C. Add a "Clear Collection" activity at the beginning of the Process.xaml workflow.
- D. All "Invoke Workflow File" activities from the Main.xaml file should be marked with the Isolated option.

正解: D

質問 # 168

Which activity is specific for UI synchronization in UiPath Studio?

- A. Process Start Trigger
- B. Get Processes
- C. Use Application/Browser
- **D. Check App State**

正解: D

解説:

The Check App State activity is specifically designed for UI synchronization. It checks the state of a UI element, ensuring that subsequent actions are performed when the UI element is in the desired state.

質問 # 169

A developer needs to use the REFramework to automate a business process that involves processing transactions within an Excel table. Each transaction in the table should follow the same steps for processing and queues cannot be used as there is no Orchestrator in the environment.

Which variable type is best suited for TransactionItem in this scenario?

- **A. System.Data.DataRow**
- B. UiPath.Core.QueueItem
- C. System.Data.DataTable
- D. System.Data.DataRow[]

正解: A

解説:

The REFramework (Robotic Enterprise Framework) is a template that provides a standard structure and best practices for developing UiPath automation projects. It uses the concept of transactions to process items from a data source, such as an Excel table, a queue, or a database. A transaction is a single unit of work that can be executed by the robot. The REFramework has a variable called TransactionItem, which stores the current transaction to be processed.

The variable type of TransactionItem depends on the type of data source that is used for the transactions. If the data source is an Orchestrator queue, then the TransactionItem should be of type UiPath.Core.QueueItem, which represents an item from the queue. If the data source is an Excel table, then the TransactionItem should be of type System.Data.DataRow, which represents a row from the table. A DataRow object contains the values of a single row in a DataTable object, which represents the entire table.

In this scenario, the developer needs to use the REFramework to automate a business process that involves processing transactions within an Excel table. Each transaction in the table should follow the same steps for processing and queues cannot be used as there is no Orchestrator in the environment. Therefore, the best variable type for TransactionItem in this scenario is System.Data.DataRow, as it can store a single row from the Excel table as a transaction.

The other options are not suitable variable types for TransactionItem in this scenario. Option B is incorrect, because UiPath.Core.QueueItem is used for queue items, not Excel rows. Option C is incorrect, because System.Data.DataRow[] is an array of DataRow objects, not a single DataRow object. Option D is incorrect, because System.Data.DataTable is a table of DataRow objects, not a single DataRow object.
