

Juniper JN0-105 Valid Dumps Demo - New JN0-105 Test Pattern

P.S. Free 2026 Juniper JN0-105 dumps are available on Google Drive shared by TestkingPass: <https://drive.google.com/open?id=1R4HjYR7NXhQGt2dJAXQWgXQ-jxHJFIJ>

We provide Juniper JN0-105 web-based self-assessment practice software that will help you to prepare for the Juniper Junos, Associate (JNCIA-Junos) exam. Juniper JN0-105 Web-based software offers computer-based assessment solutions to help you automate the entire Junos, Associate (JNCIA-Junos) exam testing procedure. The stylish and user-friendly interface works with all browsers, including Mozilla Firefox, Google Chrome, Opera, Safari, and Internet Explorer. It will make your Juniper Junos, Associate (JNCIA-Junos) exam preparation simple, quick, and smart. So, rest certain that you will discover all you need to study for and pass the Juniper JN0-105 Exam on the first try.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.

Topic 2	<ul style="list-style-type: none"> • Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.
Topic 3	<ul style="list-style-type: none"> • Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device

New JN0-105 Test Pattern | Test JN0-105 Simulator

Now, if you use JN0-105 preparation materials, you only need to learn twenty to thirty hours to go to the exam. And, you will have a 99% chance to pass the exam. Of course, you don't have to buy any other study materials. JN0-105 exam questions can satisfy all your learning needs. During this time, you must really be learning. If you just put JN0-105 Real Exam in front of them and didn't look at them, then we have no way. JN0-105 exam questions want to work with you to help you achieve your dreams.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q14-Q19):

NEW QUESTION # 14

Exhibit

```
{hold:node0}[edit]
```

```
root# set system root-authentication ?
```

Possible completions:

+ apply-groups Groups from which to inherit configuration data

+ apply-groups-except Don't inherit configuration data from these groups

encrypted-password Encrypted password string

load-key-file File (URL) containing one or more ssh keys

plain-text-password Prompt for plain text password (autoencrypted)

> ssh-dsa Secure shell (ssh) DSA public key string

> ssh-rsa Secure shell (ssh) RSA public key string

```
{hold:node0}[edit]
```

```
root# set system root-authentication plain-text-password
```

New password:

Retype new password:

```
{hold:node0}[edit]
```

```
root# commit and-quit
```

```
[edit interfaces]
```

```
'ge-0/0/0'
```

HA management port cannot be configured

error: configuration check-out failed

```
{hold:node0}[edit]
```

```
root#
```

You are unable to remotely access your Juniper device using the CLI.

Referring to the exhibit, which command would you add to the existing configuration to enable remote CLI access?

- A. set system root-authentication plain-text-password
- B. set system services ssh
- C. set system login idle-timeout 20
- D. load factory-default

Answer: B

Explanation:

In Junos OS, remote access to the device's CLI is commonly facilitated through Secure Shell (SSH), a protocol providing secure command-line access over an insecure network. The given exhibit indicates an attempt to set a root authentication password but does not show configuration for enabling remote access services. To enable SSH, which is not shown in the configuration snippet, you need to configure the device to accept SSH connections. This is done by enabling the SSH service within the system services hierarchy of the configuration. The correct command to add to the existing configuration for enabling remote CLI access via SSH is set system services ssh. This command activates the SSH service, allowing secure remote logins to the device.

NEW QUESTION # 15

You are asked to configure your device running Junos OS to automatically archive your configuration upon commit. In this scenario, which two methods are supported by the Junos OS? (Choose two)

- A. SCP
- B. FTP
- C. HTTP
- D. RCP

Answer: A,D

Explanation:

Junos OS supports multiple methods for automatically archiving configurations upon commit. Two of the supported methods are SCP (Secure Copy Protocol) and RCP (Remote Copy Protocol). These methods can be configured to save the configuration files to a remote server automatically whenever a commit is made.

NEW QUESTION # 16

You are creating a new policy to accept and redistribute routes into your IGP. In this scenario, which match criteria would you use to identify the route prefixes to select?

- A. instance
- B. neighbor
- C. route-filter
- D. route-type

Answer: C

Explanation:

When creating a new policy to accept and redistribute routes into your Interior Gateway Protocol (IGP), the route-filter match criteria is used to identify the route prefixes to select. The route-filter statement specifies which prefixes should be matched in a policy. This allows for precise control over which routes are accepted and redistributed, facilitating efficient and secure routing policies within the network.

References:

- * "show | display set | match ge-0/0/2" indicating command examples and match criteria from Useful Juniper Commands.txt.
- * Juniper official documentation: Routing Policy and Firewall Filters Configuration Guide.

NEW QUESTION # 17

Click the Exhibit button.

Referring to the exhibit, OSPF has three export policies that match different static route prefixes. The 10.10.10.0/24 static route does not match any terms in the policy1 routing policy.

What happens next in this scenario?

- A. The static route is evaluated by the policy2 routing policy.
- B. The static route is rejected by the policy1 routing policy.
- C. The static route is rejected by the default routing policy.
- D. The static route is evaluated by the policy3 routing policy.

Answer: A

Explanation:

In Junos, when multiple policies are applied to a routing protocol for route export, the routes are evaluated in the order in which the policies are listed. In the exhibit, the OSPF configuration has three export policies listed: policy1, policy2, and policy3. The static route 10.10.10.0/24 does not match any terms in policy1; therefore, it is not rejected by policy1 but is instead passed on to the next policy in the sequence, which is policy2.

If the static route matches a term in policy2 that permits the route, it will be exported into OSPF. If it does not match in policy2, it will then be evaluated by policy3. If there is no match in policy3 as well, and assuming there are no more policies listed, the route would then be subject to the default routing policy behavior, which typically rejects the route unless an explicit accept statement is
