MB-330 Latest Exam Papers & MB-330 Free Study Material

We understand the difficulty of finding the latest and accurate MB-330 questions. In today's competitive world, it is essential to prepare with the most probable Microsoft in MB-330 exam dumps to stay ahead of the competition. That's why we have created our updated Microsoft MB-330 Questions, which will help you to clear the Microsoft Dynamics 365 Supply Chain Management Functional Consultant (MB-330) exam in one go.

Microsoft Dynamics 365 Supply Chain Management Functional Consultant Sample Questions (Q460-Q465):

NEW QUESTION # 460

A company plans to stock new items and value those items by using FIFO principle. The company has multiple sites set up. There are multiple warehouses for each site.

You must be able to view the value and quantity of these items at each warehouse.

You need to apply FIFO costing per warehouse.

How should you complete the costing setup? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Requirement
Create the product and assign costing method.
Create Storage dimension groups.

Action

Set the Costing method field to FIFO.
Set the item model group to FIFO.
Enter the FIFO amount in the Costing method.
Set the item group to FIFO.

Physically track inventory by site and warehouse.
Physically track inventory by site. Financially track inventory by site and warehouse.
Physically track inventory by warehouse. Financially track inventory by site and warehouse.
Physically track inventory by site, warehouse, and location. Financially track inventory by warehouse.

Answer:

Explanation:

Answer Area

Requirement
Create the product and assign costing method.
Create Storage dimension groups.

Set the Costing method field to FIFO.
Set the item model group to FIFO.
Enter the FIFO amount in the Costing method.
Set the item group to FIFO.

Physically track inventory by site and warehouse.
Physically track inventory by site. Financially track inventory by site and warehouse.
Physically track inventory by warehouse. Financially track inventory by site and warehouse.
Physically track inventory by site, warehouse, and location. Financially track inventory by warehouse.

NEW QUESTION # 461

A food distribution company is implementing Dynamics 365 Supply Chain Management without the Warehouse management module.

The company sells prepackaged meals purchased from one or more vendors. The prepackaged meals contain a single item number. The vendors routinely communicate that lots of prepackaged meals be held if any risk of exposure is identified until they can confirm safe handling per lot. This created supply chain issues because the items are in inventory and therefore not reordered.

You need to resolve the issues.

Answer Area

Issue
Item must be identified by lot.
Held item lots must be excluded from master planning calculations.

Configuration
Item model group
Storage dimension
Tracking dimension
Product group
Batch disposition
Disposition reason code
Inventory status

Answer:

Explanation:

Answer Area

Issue
Item must be identified by lot.
Held item lots must be excluded from master planning calculations.

Configuration
Item model group
Storage dimension
Tracking dimension
Product group
Batch disposition
Disposition reason code
Inventory status

Explanation:

Box 1: Tracking dimension

To resolve the issue of identifying items by lot, you should use the tracking dimension in Dynamics 365 Supply Chain Management. Tracking dimensions allow you to track and manage inventory items based on specific attributes such as lot numbers, serial numbers, or batch numbers. In this case, you can use the lot number as a tracking dimension to ensure that each prepackaged meal can be tracked and managed according to its specific lot. This will help the company to hold specific lots when vendors communicate any risk of exposure and maintain accurate inventory levels for reordering purposes. Reference: - Microsoft Docs:

Configure tracking dimension groups (Dynamics 365 Supply Chain Management): <https://docs.microsoft.com/en-us/dynamics365/supply-chain/inventory/configure-tracking-dimension-groups>

Box 2: Batch dispositionA batch disposition is a status that indicates whether a batch can be used in production or sales processes1. You can use batch disposition codes to exclude batches from master planning calculation by setting the Include in planning field to No1. This way, you can prevent the held item lots from being reordered until they are confirmed safe by the vendor.

NEW QUESTION # 462

You need to configure the solution to replace the Excel spreadsheet.

Which feature should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement

Feature

Select the appropriate screen

	▼
Supply schedule form	
Load Planning Workbench	
Planned orders form	

Configure the appropriate feature

	▼
Period templates	
Coverage groups	
Mobile workspaces	
Planning optimization	

Answer:

NEW QUESTION # 464

A company implements Dynamics 365 Supply Chain Management.

The company needs to improve the reliability of their forecasting data.

You need to implement demand forecasting to meet the requirements.

What should you do? To answer, drag the appropriate actions to the correct requirements. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Actions

Push data into the staging table.

Generate a statistical baseline forecast.

Use safety stock calculations.

Use the statistical baseline forecast generation history feature.

Use demand forecast details.

Answer Area**Requirement**

Gather transactional historical data to generate the forecast.

View the historical demand and forecast graphically.

Automatically create planned orders in the master planning process based on the requirement or end date.

Action

Answer:

Explanation:

Actions	Answer Area Requirement	Action
Push data into the staging table.	Gather transactional historical data to generate the forecast.	Push data into the staging table.
Generate a statistical baseline forecast.	View the historical demand and forecast graphically.	Use safety stock calculations.
Use safety stock calculations.	Automatically create planned orders in the master planning process based on the requirement or end date.	Generate a statistical baseline forecast.
Use the statistical baseline forecast generation history feature.		
Use demand forecast details.
