NEW QUESTION # 43

During a Bluefield migration, you discover missing flex master data templates. What do you do?

- A. Defer to post-go-live
- **B. Rebuild them manually in production**
- C. Use reporting workaround
- D. Ignore them

Answer: B

NEW QUESTION # 44

You have a custom string field with a list of values. The values are represented as an Enumeration. Which of the following applies to this scenario?

- **A. The display order in the droop down matches the order defined in the enumeration file**
- B. In the enumeration file, the Value column must only contain whole numbers
- C. The display order of the values is alphabetical
- **D. The user can filter the values using the search box in the chooser**

Answer: A,D

NEW QUESTION # 45

If you add a custom field to the ContractWorkspace class, which other class(es) will that field be added to?

- **A. InternalContractWorkspace and SalesContractWorkspace**
- B. SalesContractRequest and InternalContractRequest
- C. AbstractContractWorkspace
- D. ContractRequest

Answer: A

Explanation:

TheContractWorkspace class is a parent class to both InternalContractWorkspace and SalesContractWorkspaceclasses in SAP Ariba. When a custom field is added to ContractWorkspace, it automatically inherits down to both these subclasses, making the field available in both internal and sales contract workspace types. It does not propagate upward to AbstractContractWorkspace or into contract request classes. This inheritance model is part of SAP Ariba's class hierarchy to ensure consistent data structures across related contract objects.

NEW QUESTION # 46

You need to revise a published form template.

What steps do you follow?

- A. Edit directly in production
- B. Clone and change ID
- C. Create a new version, edit, test, and publish
- D. Delete and recreate

Answer: C

NEW QUESTION # 47

Which of the following data elements must be manually loaded into the Production environment after full configuration migration is completed using the Intelligent Configuration Manager (ICM)? (Select 2 correct answers)

- A. Relation and Relation Entries
- B. User to Group Mapping
- C. Enumerations
- D. Units of Measure

Answer: A,C

Explanation:

After migrating configurations using ICM, Enumerations and Relation entries require manual loading into Production because they are not included in automatic migration bundles. Enumerations provide picklist values, while Relations define dependencies between fields. Units of Measure are typically part of standard configuration or migrated automatically. User to Group Mapping is managed separately through provisioning or identity management tools, not via ICM. Manual loading of these data elements ensures data integrity and avoids missing references.
