If you want to try to know more about our AWS-Solutions-Architect-Professional Dumps Torrent, our free demo will be the first step for you to download.

Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q250-Q255):

NEW QUESTION # 250

True or False: Amazon ElastiCache supports the Redis key-value store.

- A. True, ElastiCache supports the Redis key-value store.
- B. True, ElastiCache supports the Redis key-value store, but with limited functionalities.
- C. False, ElastiCache does not support the Redis key-value store.
- D. False, ElastiCache supports the Redis key-value store only if you are in a VPC environment.

Answer: A

Explanation:

Explanation

This is true. ElastiCache supports two open-source in-memory caching engines: 1. Memcached - a widely adopted memory object caching system. ElastiCache is protocol compliant with Memcached, so popular tools that you use today with existing Memcached environments will work seamlessly with the service. 2. Redis - a popular open-source in-memory key-value store that supports data structures such as sorted sets and lists.

ElastiCache supports Master / Slave replication and Multi-AZ which can be used to achieve cross AZ redundancy.

NEW QUESTION # 251

A company is using Amazon DynamoDB with provisioned throughput for the database tier of its ecommerce website. During flash sales, customers experience periods of time when the database cannot handle the high number of transactions taking place. This causes the company to lose transactions. During normal periods, the database performs appropriately.

Which solution solves the performance problem the company faces?

- **A. Switch DynamoDB to on-demand mode during flash sales.**
- B. Use Amazon Kinesis to queue transactions for processing to DynamoDB.
- C. Implement DynamoDB Accelerator for fast in memory performance.
- D. Use Amazon Simple Queue Service (Amazon SQS) to queue transactions to DynamoDB.

Answer: A

NEW QUESTION # 252

After launching an instance that you intend to serve as a NAT (Network Address Translation) device in a public subnet you modify your route tables to have the NAT device be the target of internet bound traffic of your private subnet. When you try and make an outbound connection to the internet from an instance in the private subnet, you are not successful. Which of the following steps could resolve the issue?

- **A. Disabling the Source/Destination Check attribute on the NAT instance**
- B. Attaching a second Elastic Network Interface (ENI) to the instance in the private subnet, and placing it in the public subnet
- C. Attaching a second Elastic Network Interface (ENI) to the NAT instance, and placing it in the private subnet
- D. Attaching an Elastic IP address to the instance in the private subnet

Answer: A

NEW QUESTION # 253

A company runs many workloads on AWS and uses AWS Organizations to manage its accounts. The workloads are hosted on Amazon EC2, AWS Fargate, and AWS Lambda. Some of the workloads have unpredictable demand. Accounts record high usage in some months and low usage in other months.

The company wants to optimize its compute costs over the next 3 years. A solutions architect obtains a 6-month average for each of the accounts across the organization to calculate usage.

Which solution will provide the MOST cost savings for all the organization's compute usage?

- A. Purchase a Compute Savings Plan for the organization from the management account by using the recommendation at the management account level.
- B. Purchase an EC2 Instance Savings Plan for each member account from the management account based on EC2 usage data from the last 6 months.
- C. Purchase Reserved Instances for each member account that had high EC2 usage according to the data from the last 6 months.
- **D. Purchase Reserved Instances for the organization to match the size and number of the most common EC2 instances from the member accounts.**

Answer: D

NEW QUESTION # 254

A user is trying to understand the detailed CloudWatch monitoring concept. Which of the below mentioned services does not provide detailed monitoring with CloudWatch?

- A. AWS Route53
- B. AWS RDS
- **C. AWS EMR**
- D. AWS ELB

Answer: C

Explanation:

Explanation

CloudWatch is used to monitor AWS as well as the custom services. It provides either basic or detailed monitoring for the supported AWS products. In basic monitoring, a service sends data points to CloudWatch every five minutes, while in detailed monitoring a service sends data points to CloudWatch every minute.

Services, such as RDS, EC2, Auto Scaling, ELB, and Route 53 can provide the monitoring data every minute.
