

# Pass Guaranteed Quiz Microsoft - Valid SC-100 - New Microsoft Cybersecurity Architect Test Tips

BTW, DOWNLOAD part of ValidExam SC-100 dumps from Cloud Storage: <https://drive.google.com/open?id=13uHngl7PsRjzHjasj9QC8SbE13MiG8F>

We have applied the latest technologies to the design of our Microsoft SC-100 test prep not only on the content but also on the displays. As a consequence you are able to keep pace with the changeable world and remain your advantages with our Microsoft Cybersecurity Architect SC-100 Training Materials.

Microsoft SC-100 certification is an excellent way to showcase your cybersecurity skills and knowledge to potential employers. It demonstrates that you have a deep understanding of cybersecurity concepts and the ability to design and implement secure solutions using Microsoft technologies. With the increasing demand for cybersecurity professionals, obtaining a Microsoft SC-100 certification can help you stand out from other candidates and advance your career in cybersecurity.

## Microsoft SC-100 Exam Practice Test Helps You Ace Your Microsoft Cybersecurity Architect

Passing the Microsoft SC-100 exam is no easy feat. It requires a great deal of preparation, knowledge, and experience. However, you can use our free practice test to help you prepare for it. Our practice exams are written by our own team of subject matter experts and provide a practical approach to learning concepts. In addition, they are updated regularly so that they always reflect the latest version of the exam.

Our **SC-100 Dumps** include questions that are similar in format and content to actual exam questions. This allows you to become familiar with how real exams look like and how they are scored. You can also use this opportunity to assess your performance against different types of questions so that you can focus on improving those areas where you need improvement.

We offer free access to all of our practice exams for one year from the date of purchase or registration. After this period expires, you will need to pay \$9.99 per month in order to continue using them.

To prepare for the Microsoft SC-100 Certification Exam, you'll need to have a solid understanding of cybersecurity fundamentals and a strong foundation in computer networking and architecture. You can also take advantage of Microsoft's online training resources and study guides to help you prepare for the exam. Microsoft also offers a range of practice tests and simulations to help you familiarize yourself with the exam format and identify areas where you may need to focus your study efforts.

## Pass-Sure New Test Tips

Sharp tools make good work. Valid SC-100 test questions and answers will make your exam easy. If you still feel difficult in passing exam, our products are suitable for you. SC-100 test questions and answers are worked out by ValidExam professional experts who have more than 8 years in this field. With so many years' development, we can keep stable high passing rate for Microsoft SC-100 Exam. You will only spend dozens of money and 20-30 hours' preparation on our SC-100 test questions, passing exam is easy for you.

### Microsoft Cybersecurity Architect Sample Questions (Q172-Q177):

#### NEW QUESTION # 172

Your company has an Azure subscription that has enhanced security enabled for Microsoft Defender for Cloud. The company signs a contract with the United States government. You need to review the current subscription for NIST 800-53 compliance. What should you do first?

- A. From Defender for Cloud, review the secure score recommendations.
- **B. From Defender for Cloud, add a regulatory compliance standard.**
- C. From Defender for Cloud, review the Azure security baseline for audit report.
- D. From Microsoft Sentinel, configure the Microsoft Defender for Cloud data connector.

**Answer: B**

#### NEW QUESTION # 173

Hotspot Question

You have an Azure subscription.

You plan to deploy an Azure App Service app named App1 that will access an external web service by using a username and password.

You need to recommend a password storage solution for App1 that meets the following requirements:

- Ensures that the password is stored securely

- Ensures that App1 can authenticate to the service that will store the password Which service should you use to store the password, and which authentication method should App1 use to access the service? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

Service:

- Azure Key Vault
- Microsoft Entra ID Protection
- Privileged Identity Management (PIM)

Authentication method:

- Certificate
- Group managed service account (gMSA)
- Guest account
- Managed identity

**Answer:**

Explanation:

### Answer Area

Service:

Authentication method:

Azure Key Vault
Microsoft Entra ID Protection
Privileged Identity Management (PIM)

Certificate
Group managed service account (gMSA)
Guest account
Managed identity

Explanation:

Box 1: Azure Key Vault

An Azure App Service app can securely store an external password in an Azure Key Vault. Azure Key Vault provides a secure repository for secrets like passwords, enabling you to manage them separately from your application. You can grant your App Service a Managed Identity, assign that identity access permissions to the Key Vault, and then reference the secret from your app's configuration, allowing the app to retrieve the password securely.

Box 2: Managed Identity

The best way for an Azure App Service to authenticate to Azure Key Vault is by using a Managed Identity, which automatically handles credentials and removes the need to manage secrets in your application code. To implement this, enable a System-assigned or User-assigned managed identity for your App Service, grant that identity the necessary permissions (e.g., Key Vault Secrets Officer) on the Key Vault, and then update your application code to use the Azure Key Vault SDK to retrieve secrets.

### NEW QUESTION # 174

You need to recommend a solution to meet the AWS requirements.

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

### Answer Area

For the AWS EC2 instances:

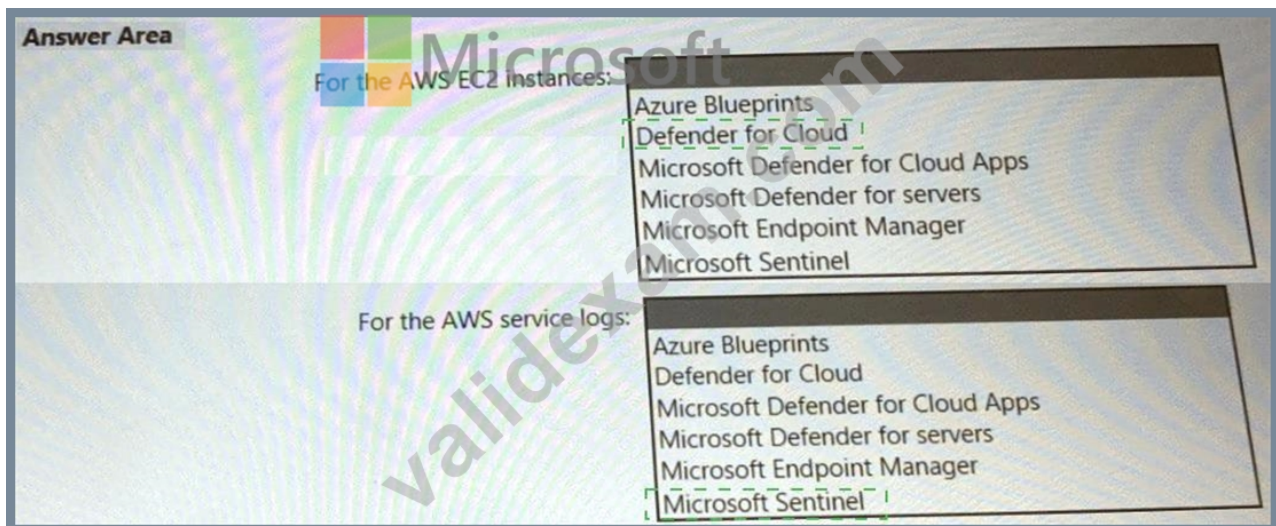

- Azure Blueprints
- Defender for Cloud
- Microsoft Defender for Cloud Apps
- Microsoft Defender for servers
- Microsoft Endpoint Manager
- Microsoft Sentinel

For the AWS service logs:

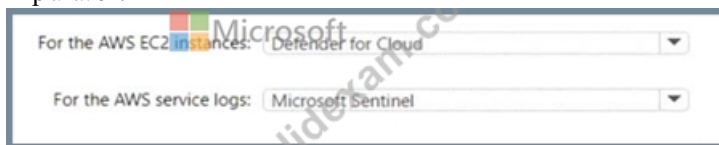

- Azure Blueprints
- Defender for Cloud
- Microsoft Defender for Cloud Apps
- Microsoft Defender for servers
- Microsoft Endpoint Manager
- Microsoft Sentinel

Answer:

Explanation:

Explanation:

#### NEW QUESTION # 175

Your company has a Microsoft 365 subscription and uses Microsoft Defender for Identity.

You are informed about incidents that relate to compromised identities.

You need to recommend a solution to expose several accounts for attackers to exploit.

When the attackers attempt to exploit the accounts, an alert must be triggered.

Which Defender for Identity feature should you include in the recommendation?

- A. honeypot entity tags
- B. custom user tags
- C. sensitivity labels
- D. standalone sensors

**Answer: A**

Explanation:

Honeypot tags

Honeypot entities are used as traps for malicious actors. Any authentication associated with these honeypot entities triggers an alert.

<https://docs.microsoft.com/en-us/defender-for-identity/entity-tags>

#### NEW QUESTION # 176

You have an Azure subscription that contains multiple storage accounts. The accounts contain Azure Files shares and Azure Blob Storage containers. The accounts have encryption scopes and infrastructure encryption enabled.

You need to implement customer-managed key-based encryption for the shares and the containers. The solution must ensure that the encryption keys are applied at the most granular level.

At which level should you apply the encryption keys? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
