Manufacturing Cloud Accredited Professional Exam certification is ideal for those who work with customers in the manufacturing industry and want to help them optimize their operations with the help of Salesforce.

Salesforce Manufacturing Cloud Accredited Professional Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

A Salesforce consultant built an integration that calls an external endpoint via an Apex callout. However, the callout is failing with the following error: "System.CalloutException: Unauthorized endpoint".

What should the consultant do to fix this error?

- **A. Register the URL in Remote Site Settings.**
- B. Ensure that the integration user has the necessary permissions to perform the callout.
- C. Create a connected app for the external system.

Answer: A

Explanation:

Explanation

The error "System.CalloutException: Unauthorized endpoint" indicates that the external endpoint is not whitelisted in Salesforce. To allow Apex callouts to access an external endpoint, the administrator or the developer must register the URL in Remote Site Settings. This is a security feature that prevents unauthorized access to external resources from Apex code. Creating a connected app for the external system or ensuring that the integration user has the necessary permissions to perform the callout are not sufficient to fix this error, as they do not address the issue of whitelisting the endpoint^{1,2}. NEW QUESTION # 40

When a target is charged in account manager targets, which action must be taken to reflect this change to account manager assignment values?

- **A. Propagate to assignments**
- B. assignment

Answer: A

NEW QUESTION # 41

Universal Containers (UC) wants to enrich the warranty claims experience for partners and distributors. UC wants its partners and distributors to submit warranty claims and closely track their status from the Manufacturing Experience Cloud site.

Which standard object captures Type, Reason, and Account information?

- A. Claim Participant
- **B. Claim**
- C. Claim Item

Answer: B

Explanation:

The standard object that captures Type, Reason, and Account information for warranty claims is Claim. A Claim record represents a request made by a partner, dealer, or distributor to the manufacturer to repair, replace, or provide a refund for a defective asset¹. The Claim object has fields such as Claim Type, Claim Reason, and Account Name that store this information². Reference: How Warranty Claim Information Is Represented in Manufacturing Cloud, Claim Fields in Manufacturing Cloud

NEW QUESTION # 42

Which two Manufacturing cloud functionalities are available in the standard Manufacturing Experience Cloud Template?

- A. Rebate Management
- **B. Sales Agreements**
- **C. Account Based Forecasts**
- D. Account Manager Targets

Answer: B,C

Explanation:

Explanation

The standard Manufacturing Experience Cloud Template is a preconfigured community template that provides a branded and personalized portal for your customers, partners, and distributors. It includes two key Manufacturing Cloud functionalities: Sales Agreements and Account Based Forecasts. Sales Agreements allow you to manage and track your run-rate business with your customers and partners, including pricing, volumes, and order realization. Account Based Forecasts enable you to create and update demand forecasts based on sales agreements, opportunities, and other inputs, and share them with your internal and external stakeholders. The standard Manufacturing Experience Cloud Template also includes other features, such as account and contact management, opportunity management, order management, case management, and reports and dashboards. NEW QUESTION # 43

An administrator has completed the data migration from a client's legacy system to Manufacturing Cloud. The client wants to ensure all Advanced Account Forecast calculations are correct and the data has been properly migrated.

How should the administrator reassure the client that data has been accurately calculated?

- **A. Launch the calculations of the Advanced Account Forecast and compare the values with the legacy system.**
- B. Request the users to verify the Advanced Account Forecast values of their accounts.
- C. Use Data Loader to generate a .csv file and manually compare it to import files.

Answer: A

Explanation:

Explanation

The best way to reassure the client that the data has been accurately calculated is to launch the calculations of the Advanced Account Forecast and compare the values with the legacy system. This will ensure that the forecast metrics, such as planned revenue, actual revenue, forecast quantity, and forecast revenue, are consistent and correct. The administrator can use the Data Processing Engine templates to configure the calculations and run them manually or on a schedule¹. The administrator can also view the forecast results in the Accounts Health dashboard or the Account Forecast tab². Using Data Loader to generate a .csv file and manually compare it to import files is not a reliable method, as it may introduce errors or inconsistencies in the data format or values. Requesting the users to verify the Advanced Account Forecast values of their accounts is not a feasible method, as it may be time-consuming, impractical, or inaccurate, depending on the number and complexity of the accounts.
