Fortinet FCSS - Network Security 7.4 Support Engineer Sample Questions (Q90-Q95):

NEW QUESTION # 90

Exhibit.

Refer to the exhibit, which contains a screenshot of some phase 1 settings.

The VPN is not up. To diagnose the issue, the administrator enters the following CLI commands on an SSH session on FortiGate:

```
diagnose vpn ike log-filter set-addr4 10.0.10.1
diagnose debug enable
```

However, the IKE real-time debug does not show any output. Why?

- A. The debug shows only error messages. If there is no output, then the phase 1 and phase 2 configurations match.
- B. Replace `diagnose debug application ike -1` with `diagnose debug application ipsec -1`.
- C. The log-filter setting is incorrect. The VPN traffic does not match this filter.
- **D. The administrator must also run the command `diagnose debug enable`.**

Answer: D

NEW QUESTION # 91

Refer to the exhibit.

Assuming a default configuration, which three statements are true? (Choose three.)

- **A. User B: Fail. There is no route to 95.56.234.24 using wan2 in the routing table.**
- B. Strict RPF is enabled by default.

- C. User B: Pass. FortiGate will use asymmetric routing using wan1 to reply to traffic for 95.56.234.24.
- D. User A: Pass. The default static route through wan1 passes the RPF check regardless of the source IP address.
- E. User C: Fail. There is no route to 10.0.4.63 using port1 in the routing table.

Answer: A,C,E

NEW QUESTION # 92

Refer to the exhibit, which shows the port1 interface configuration on FortiGate and partial session information for ICMP traffic.

```
config system interface
  edit "port1"
    set preserve-session-route enable
  next
end

# diagnose sys session list
session info: proto=1 proto_state=00 duration=4 expire=55 timeout=0 refresh_dir=both flags=00000000 socktype=0 sockport=0 av_idx=0 use=3
state=log may_dirty npu f00 route_preserve
origin->sink: org pre->post, reply pre->post dev=7->19/19->7 gwy=100.64.1.1/10.0.1.101

# diagnose netlink interface list | grep index=19
if=port1 family=00 type=768 index=19 mtu=1420 link=0 master=0
```

What happens to the session information if a routing change occurs that affects this session?

- A. The session will be flagged as dirty but no route lookups will be performed.
- B. The session information will not change unless the current route has been removed from the routing table.
- C. Sessions involving port7 or port19 will not have their routing information flushed.
- D. Only the interface and gateway information for dev=7 will be removed.

Answer: B

Explanation:

With preserve-session-route enabled, FortiGate pins the session's egress interface and gateway to the original values and does not re-evaluate its routing when you tweak or add alternate routes. Only if the specific route it's using is completely removed from the routing table will the session be flushed or re looked up.

NEW QUESTION # 93

Refer to the exhibit, which shows the output of get router info bgp summary.

```
get router info bgp summary

VRF 0 BGP router identifier 172.16.1.254, local AS number 65100
BGP table version is 3
2 BGP AS-PATH entries
0 BGP community entries

Neighbor      V      AS MsgRcvd MsgSent  TblVer  InQ OutQ Up/Down State/PfxRcd
100.64.1.254  4      100    18      20       3    0    0 00:02:55      1
100.64.2.254  4      100     0       0       0    0    0 never        Active

Total number of neighbors 2
```

Which two statements are true? (Choose two.)

- A. The local FortiGate is still calculating the prefixes received from BGP neighbor 100.64.2.264
- B. The local FortiGate has received one prefix from BGP neighbor 100.64.1.254.
- C. The TCP connection with BGP neighbor 100.64.2.254 was successful.
- D. The local FortiGate has received 18 packets from a BGP neighbor.

Answer: B,D

NEW QUESTION # 94

Which two statements about Security Fabric communications are true? (Choose two.)

- A. The default port for Neighbor Discovery can be modified.
- B. By default, the downstream FortiGate establishes a connection with the upstream FortiGate using TCP port 8013.

- C. FortiTelemetry and Neighbor Discovery both operate using TCP.
- **D. FortiTelemetry must be manually enabled on the FortiGate interface.**

Answer: B,D

Explanation:

The default TCP port 8013 for FortiTelemetry can be changed if necessary. In order for a downstream FortiGate to join the Security Fabric, it must initiate the session to the upstream FortiGate through TCP port 8013. For an upstream FortiGate to be able to accept connections from a downstream FortiGate, the Security Fabric Connection setting must be enabled on the network interface (on the GUI under Administrative Access).
