

Latest GH-900 - GitHub Foundations Exam Blueprint

P.S. Free 2026 Microsoft GH-900 dumps are available on Google Drive shared by EduDump: https://drive.google.com/open?id=1yvpq_lEiBJRyLSfyU6M6ORXJXs_zyzVj

Achieving the Microsoft GH-900 certificate is an excellent way of paying your way in the tech field. However, to become Microsoft GH-900 certified, you will have to crack the Microsoft GH-900 exam. This is a challenging task since preparation for the Microsoft GH-900 Exam demands an inside-out understanding of GH-900 domains and many Microsoft GH-900 test applicants do not have enough time due to their busy routines.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.
Topic 2	Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.
Topic 3	- Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI - CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.
Topic 4	Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.

Pass Guaranteed Quiz Microsoft - GH-900 - The Best GitHub Foundations Exam Blueprint

In today's technological world, more and more students are taking the GitHub Foundations (GH-900) exam online. While this can be a convenient way to take an GitHub Foundations (GH-900) exam dumps, it can also be stressful. Luckily, EduDump's best

GitHub Foundations (GH-900) exam questions can help you prepare for your GitHub Foundations (GH-900) certification exam and reduce your stress.

Microsoft GitHub Foundations Sample Questions (Q27-Q32):

NEW QUESTION # 27

Which of the following is a restriction for Enterprise Managed Users (EMUs)?

- A. Users cannot create public repositories.
- B. Custom repository roles are not available.
- C. Each GitHub team must be linked to an identity provider group.
- D. Organization base permissions cannot be applied.

Answer: A

Explanation:

Managed user accounts cannot create public content or collaborate outside your enterprise.

Managed user accounts can contribute only to private and internal repositories within their enterprise and their own private repositories.

Reference:

<https://docs.github.com/en/enterprise-cloud@latest/admin/managing-iam/understanding-iam-for-enterprises/abilities-and-restrictions-of-managed-user-accounts>

NEW QUESTION # 28

What is the minimum access needed to contribute to a repository?

- A. Triage
- B. Read
- C. Write
- D. Maintain

Answer: C

Explanation:

To contribute to a GitHub repository, a user typically needs to be able to create branches, push changes, and open pull requests. These actions require Write access, which is the minimum level of access needed to contribute code directly to a repository.

Write Access:

Option D is correct because "Write" access allows users to contribute to the repository by pushing changes, creating branches, and opening pull requests. This is the minimum required access level for contributing code.

NEW QUESTION # 29

A distributed version control system is best described as a system that:

- A. Requires developers to manually track and manage different versions of their files using naming conventions and manual backups.
- B. Stores project files on a cloud-based server and allows multiple developers to collaborate on the same codebase simultaneously.
- C. Ensures each developer has their own local copy of the entire code repository, including the complete project history and metadata.
- D. Relies on a central server to store the entire project history and allows developers to check out files for editing.

Answer: D

Explanation:

A distributed version control system (DVCS) like Git is best described as a system that ensures each developer has their own local copy of the entire code repository, including the complete project history and metadata. This decentralized approach allows developers to work independently, with full access to the project's history and files, and later synchronize their changes with others. Unlike centralized systems, DVCS does not rely on a single central server, which provides greater flexibility and robustness in collaboration.

NEW QUESTION # 30

What are primary benefits of using GitHub issues templates? (Choose two.)

- A. To provide an easy-to-fill-out form for creating new issues
- B. To automatically label or assign newly created issues
- C. To easily coerce existing issues into a standard format
- D. To automatically create new branches when issues are created

Answer: A,B

Explanation:

The primary benefits of using GitHub issues templates include:

A). To automatically label or assign newly created issues: Issue templates can be configured to automatically apply labels or assign users when the issue is created, helping to streamline triage and management processes.

B). To provide an easy-to-fill-out form for creating new issues: Templates provide a standardized format for submitting issues, ensuring that all necessary information is captured and reducing the need for follow-up questions.

Coercing existing issues into a standard format or automatically creating new branches when issues are created are not functions provided by GitHub issues templates.

NEW QUESTION # 31

What is defined as software that can be freely used, modified, and shared by anyone?

- A. proprietary
- B. free source
- C. open source
- D. Innersource

Answer: C

Explanation:

Open source software (OSS) can be freely used, modified, and shared because its source code is publicly available under specific licenses. These open source licenses grant users the freedom to access, study, change, and distribute the software to anyone, fostering transparency, collaboration, and innovation within a global community.
