The SnowPro Core Certification exam is an excellent way for professionals to boost their careers and enhance their job prospects. SnowPro Core Certification Exam certification demonstrates that an individual has the skills and knowledge required to work with Snowflake's cloud data platform effectively. With the demand for Snowflake professionals increasing rapidly, earning the SnowPro Core Certification can help individuals stand out in the job market and gain a competitive advantage. Moreover, the certification can also lead to higher salaries and better job opportunities.

The Snowflake COF-C02 exam is intended for data professionals with at least six months of Snowflake experience. The evaluation process is divided into two categories: Core Concepts and Querying. In the Core Concepts section, candidates will confront questions about snowflake accounts, virtual warehouses, databases, tables, columns, and other essential Snowflake features. The Querying part of the exam comprises a set of queries in Snowflake to demonstrate the candidate's ability to process complex data scenarios.

To prepare for the Snowflake COF-C02 Exam, candidates should have experience working with Snowflake and be familiar with its architecture and features. They should also have a solid understanding of SQL and data warehousing concepts. Additionally, Snowflake offers a range of training and certification resources including study guides, practice tests, and instructor-led courses. Earning the SnowPro Core Certification can enhance job opportunities and demonstrate a commitment to continuous learning and professional development in the field of data warehousing.

## **Snowflake SnowPro Core Certification Exam Sample Questions (Q500-Q505):**

### **NEW QUESTION # 500**

What metrics will the show tables command in Snowsight provide?

- A. Fail-safe bytes
- B. Active bytes
- **C. Time Travel bytes**
- D. Retained for clone bytes

**Answer: C**

### **NEW QUESTION # 501**

The fail-safe retention period is how many days?

- A. 45 days
- **B. 7 days**
- C. 90 days
- D. 1 day

**Answer: B**

Explanation:

Fail-safe is a feature in Snowflake that provides an additional layer of data protection.

After the Time Travel retention period ends, Fail-safe offers a non-configurable 7-day period during which historical data may be recoverable by Snowflake.

This period is designed to protect against accidental data loss and is not intended for customer access.

### **NEW QUESTION # 502**

Which Snowflake layer is associated with virtual warehouses?

- A. Cloud services
- B. Elastic memory
- **C. Query processing**
- D. Database storage

**Answer: C**

Explanation:

The layer of Snowflake's architecture associated with virtual warehouses is the Query Processing layer. Virtual warehouses in Snowflake are dedicated compute clusters that execute SQL queries against the stored data.

This layer is responsible for the entire query execution process, including parsing, optimization, and the actual computation. It operates independently of the storage layer, enabling Snowflake to scale compute and storage resources separately for efficiency and cost-effectiveness.

#### NEW QUESTION # 504

What transformations are supported in a CREATE PIPE ... AS COPY ... FROM (....) statement? (Select TWO.)

- A. Columns can be omitted
- B. Incoming data can be joined with other tables
- C. Columns can be reordered
- D. Data can be filtered by an optional where clause
- E. Row level access can be defined

**Answer: A,D**

Explanation:

In a CREATE PIPE ... AS COPY ... FROM (....) statement, the supported transformations include filtering data using an optional WHERE clause and omitting columns. The WHERE clause allows for the specification of conditions to filter the data that is being loaded, ensuring only relevant data is inserted into the table. Omitting columns enables the exclusion of certain columns from the data load, which can be useful when the incoming data contains more columns than are needed for the target table.
