Latest F5 F5CAB5 Exam Questions in Three Formats

Exam B F5 101 100 Questions and Answers 2023-2024 with complete solution

What does HTTP status code 500 mean?   - A. Service unavailable
B. Internal server error ###
C. Gateway timeout
D. Bad gateway

An administrator wants to insert per-session data in a users browser so that user requests are directed to the same session.
Which session persistence method should the administrator use?   - A. SSL persistence
B. Source address persistence
C. Destination address persistence
D. Cookie persistence ###

An organization needs to protect its data center from layer three-based and layer four-based exploits.
Which F5 product provides this functionality   - A. AFM ###
B. ASM
C. GTM
D. APM

In which FTP mode is the server responsible for initiating the data correction back to the client?   - A. Protected FTP
B. Active FTP ###
C. Secure FTP
D. Passive FTP

A company deploys F5 load balancers to manage a large number of secure applications. The company manage certificates. Which F5 product provides this functionality?   - A. iHealth
B. BIG-IQ ###
C. GTM
D. LTM

What are two examples of network layer protocols? (Choose two)   - A. ARP ###
B. TCP
C. IPv4
D. BGP
E. ICMP ###

By practicing under the real exam scenario of this F5 F5CAB5 web-based practice test, you can cope with exam anxiety and appear in the final test with maximum confidence. You can change the time limit and number of questions of this F5 F5CAB5 web-based practice test. This customization feature of our BIG-IP Administration Support and Troubleshooting (F5CAB5) web-based practice exam aids in practicing as per your requirements. You can assess and improve your knowledge with our F5 F5CAB5 practice exam.

Authentic Solutions Of The F5 F5CAB5 Exam Questions. Consider sitting for an BIG-IP Administration Support and Troubleshooting and discovering that the practice materials you've been using are incorrect and useless. The technical staff at Exam4Tests has gone through the F5 certification process and knows the need to be realistic and exact. Hundreds of professionals worldwide examine and test every F5 F5CAB5 Practice Exam regularly.

>> F5CAB5 Exams <<

Pass Guaranteed Quiz F5CAB5 - BIG-IP Administration Support and Troubleshooting Fantastic Exams

By unremitting effort and studious research of the F5CAB5 actual exam, our professionals devised our high quality and high F5CAB5 effective practice materials which win consensus acceptance around the world. They are meritorious experts with a professional background in this line and remain unpretentious attitude towards our F5CAB5 Preparation materials all the time. They are unsuspecting experts who you can count on.

F5 BIG-IP Administration Support and Troubleshooting Sample Questions (Q30-Q35):

NEW QUESTION # 30
A BIG-IP Administrator creates a new Virtual Server. The end user is unable to access the page. During troubleshooting, the administrator learns that the connection between the BIG-IP system and server is NOT set up correctly. What should the administrator do to solve this issue?

- A. Disable Address Translation
- B. Set Address Translation to SNAT and have self-IP configured in the same subnet of servers
- C. Set Address Translation to SNAT and configure a specific translation address
- D. Set Address Translation to Auto Map, configure a SNAT pool, and have pool members in the same subnet of the servers

Answer: C

Explanation:
When a virtual server is not working as expected despite the pool members being marked "UP" (Green), the issue is frequently a return-path routing failure. If the BIG-IP forwards a request with the original client's source IP address, the backend server will try to respond directly to that client. If the server does not have its default gateway pointed back to the BIG-IP, the response packet will be routed elsewhere (or dropped), resulting in a connection timeout for the user. To resolve this, the administrator must configure "Source Address Translation" (SNAT). By setting SNAT to "Automap" or a specific SNAT address, the BIG-IP replaces the client's IP with its own internal self-IP. The backend server then sees the BIG-IP as the source and sends the response back to it locally. This troubleshooting step ensures a functional, symmetric tr18affic flow. Identifying the need for SNAT is one of the most common troubleshooting tasks for new virtual server deployments where the BIG-IP is not the default gateway for the backend servers.

NEW QUESTION # 31
In a busy environment where a pool is not functioning as expected after adding new members, which setting is critical for managing traffic to the new member?

- A. Allow SNAT
- B. Action On Service Down
- C. Availability Requirement
- D. Slow Ramp Time

Answer: D

Explanation:
When a pool is not working as expected immediately after adding new members to a busy environment, the
"Slow Ramp Time" setting is a critical factor
In a pool using the "Least Connections" load balancing method, a new member starts with zero active connections5858. Without a slow ramp time, the BIG-IP will immediately direct a high volume of new traffic to this server to "equalize" it with other members. This sudden surge can overwhelm the server's application stack before it has fully initialized or warmed its caches, leading to failures. By configuring a "Slow Ramp Time," the administrator ensures that the system gradually increases the amount of traffic sent to the new member over a specified duration. The traffic sent is proportional to the time the member has been available relative to the ramp time setting62. If the application fails only for users routed to new servers, reviewing this setting helps ensure that new capacity is integrated into the pool without disrupting service performance

NEW QUESTION # 32
Users are unable to reach an application. The BIG-IP Administrator checks the Configuration Utility and observes that the Virtual Server has a red diamond in front of the status. What is causing this issue?

- A. All pool members are down.
- B. The Virtual Server is receiving HTTPS traffic over HTTP virtual.
- C. The Virtual Server is disabled.
- D. All pool members have been disabled.

Answer: A

Explanation:
In the BIG-IP Configuration Utility, the status icon (shape and color) provides immediate feedback on why a virtual server is not working as expected81. A "Red Diamond" indicates that the object is "Offline" and unavailable to process traffic82. For a virtual server, this specific status typically means it has inherited an offline state from its mandatory backend resources8383. If all pool members associated with the virtual server have failed their health monitors, the virtual server will transition to a red diamond status because it has no healthy destination for incoming requests. This is distinct from a "Black Circle," which would indicate the virtual server has been manually "Disabled" by an administrator85858585. To troubleshoot a red diamond, the administrator must examine the associated pool and its members to determine why the health monitors are failing (e.g., server crashes, network path failures, or incorrect monitor strings). Resolving the health check failures on the pool members will return the virtual server to an "Available" (Green) status.

NEW QUESTION # 33
A BIG-IP Administrator observes the following messages in the /var/log/ltm log:
warning tmm[pid]: 011e0002: sweeper_segment_cb_any: Aggressive mode /Common/default-eviction-policy activated (0) (global memory) (345209/690176 pages) warning tmm[pid]: 011e0003: Aggressive mode sweeper /Common/default-eviction-policy (0) (global memory) 1 connections killed warning tmm[pid]: 011e0003: Aggressive mode sweeper /Common/default-eviction-policy (0) (global memory) 1 connections killed warning tmm[pid]: 011e0003: Aggressive mode sweeper /Common/default-eviction-policy (0) (global memory) 1 connections killed What is happening when the BIG-IP Administrator sees the messages displayed above? (Choose two answers)

- A. The BIG-IP system starts reaping connections; some connections will be dropped
- B. The global eviction policy is triggered due to swap memory being used too high
- C. The BIG-IP system starts reaping connections; all the connections will be dropped
- D. The global eviction policy is triggered due to TMM memory exhaustion

Answer: A,D

Explanation:
Comprehensive and Detailed 150 to 250 Words Explanation From BIG-IP Administration, Support, and Troubleshooting Documents:
These log messages indicate that the BIG-IP system's Traffic Management Microkernel (TMM) has entered aggressive eviction mode due to high global memory utilization. When TMM memory consumption reaches critical thresholds, BIG-IP activates the default eviction policy to protect system stability and prevent a full traffic processing failure. This condition directly corresponds to Option A, where the global eviction policy is triggered because TMM memory resources are nearing exhaustion.
Once aggressive mode is activated, BIG-IP begins using the connection sweeper mechanism, which selectively terminates existing connections to free memory. The repeated log entries stating "1 connections killed" confirm that the system is reaping some connections, not all connections. This behavior matches Option C. The eviction process is incremental and controlled, targeting idle, low-priority, or least-recently-used connections first to minimize impact on active traffic.
Option B is incorrect because BIG-IP does not drop all connections during aggressive mode; it only removes enough connections to relieve memory pressure. Option D is also incorrect because TMM eviction is based on TMM global memory usage, not swap memory utilization. TMM does not rely on swap space in the same way the host Linux system does.
These messages are a critical warning sign that the system is under memory stress and may require traffic optimization, connection limits, or hardware scaling.

NEW QUESTION # 34
Which menu should you use on the BIG-IP Configuration Utility to generate a QKView support file? (Choose one answer)

- A. System > Support
- B. System > Logs
- C. System > Archive
- D. System > Configuration

Answer: A

Explanation:
Comprehensive and Detailed 150 to 250 Words Explanation From BIG-IP Administration, Support, and Troubleshooting Documents:
AQKViewfile is the primary diagnostic support bundle used by F5 Support to troubleshoot BIG-IP system issues. It contains comprehensive system information, including running configuration, licensing details, module provisioning, hardware status, software

versions, log files, statistics, and the output of numerous diagnostic commands. Generating a QKView is a standard and recommended first step when investigating performance problems, configuration issues, or when opening a support case with F5. In the BIG-IP Configuration Utility (GUI), the correct and supported location to generate a QKView isSystem > Support. This menu is specifically designed for support and troubleshooting operations. From this section, administrators can generate a QKView file, monitor its creation progress, download it locally, or upload it directly to F5 iHealth for automated analysis. This workflow is clearly documented in BIG-IP Administration and Support guides and aligns with F5 best practices.

The other menu options are not appropriate:

* System > Configurationis used for system-wide settings such as DNS, NTP, and device identity.
* System > Archiveis used to create UCS backup files, which are configuration backups, not diagnostic bundles.
* System > Logsis used only for viewing system logs, not generating support files.

Therefore,System > Supportis the correct and only valid answer.

NEW QUESTION # 35

......

Features of our web-based certification for BIG-IP Administration Support and Troubleshooting (F5CAB5) practice test and the desktop simulation software for F5 F5CAB5 exam questions are similar. The web-based F5CAB5 practice test is supported by operating systems. It is an internet-based self-assessment test, eliminating the need for any software installation. The web-based F5 F5CAB5 Practice Exam is compatible with major browsers. Get a demo of our products, it's free to use. Upon completing the purchase, you will be able to immediately download the full version of our Exam4Tests BIG-IP Administration Support and Troubleshooting (F5CAB5) practice questions product.

F5CAB5 Reliable Exam Test: https://www.exam4tests.com/F5CAB5-valid-braindumps.html

You can adjust your F5CAB5 study plan according to the test result after each practice test, The web-based BIG-IP Administration Support and Troubleshooting (F5CAB5) practice exam can be accessed through online browsing anywhere just with a stable internet connection, We offer you free update for one year, and the update version for F5CAB5 exam materials will be sent to your email automatically, F5 F5CAB5 Exams We choose the international third party to ensure the safety of the fund.

You immediately take that effectiveness a big step further by gaining New F5CAB5 Test Pdf an understanding of convolutional layers and how they have can be stacked to solve increasingly complex problems with larger data sets.

100% Pass 2026 Efficient F5CAB5: BIG-IP Administration Support and Troubleshooting Exams

Modify the output of the core content component through a template override file, You can adjust your F5CAB5 Study Plan according to the test result after each practice test.

The web-based BIG-IP Administration Support and Troubleshooting (F5CAB5) practice exam can be accessed through online browsing anywhere just with a stable internet connection, We offer you free update for one year, and the update version for F5CAB5 exam materials will be sent to your email automatically.

We choose the international third party to ensure the safety of the fund, F5CAB5 Thinking that if you got the certificate, you can get a higher salary, and you're your position in the company will also in a higher level.
