NEW QUESTION # 42
Which feature can a Citrix Administrator use to publish applications from an Application Group, considering only a subset of the machines in the selected Delivery Group?

- A. Session Sharing
- B. Limit Visibility

- C. Application Lingering
- D. Tag restriction

Answer: D

Explanation:
Tag restriction allows an administrator to publish applications from an Application Group but restrict them to run only on a subset of machines within the associated Delivery Group. This provides flexibility in controlling which resources are used for specific applications.

NEW QUESTION # 43
Scenario: A Citrix Administrator needs to power-manage a group of Server OS Virtual Delivery Agent (VDA) machines that are all in the same Delivery Group. The administrator needs all the machines to be restarted once a week during the weekend. Additionally, a subset of the machines should be restarted every day during non-peak hours. Which feature must the administrator change from the default values in order to fulfill the requirements?

- A. Tag restrictions
- B. Weekday and weekend hours
- C. Restart duration
- D. Peak and non-peak hours

Answer: A

Explanation:
Tag restrictions allow administrators to apply different power management schedules to subsets of machines within the same Delivery Group. By tagging certain Server OS VDAs, the administrator can configure weekly restarts for all machines and daily restarts for only the tagged subset during non-peak hours.

NEW QUESTION # 44
Scenario: A Citrix Administrator maintains a Citrix Virtual Apps and Desktops Site with local storage that contains several logical disk space locations. The administrator would like to reduce the total number of writes on the storage.
