Test 1z0-076 Cram Pdf | 1z0-076 Valid Exam Format

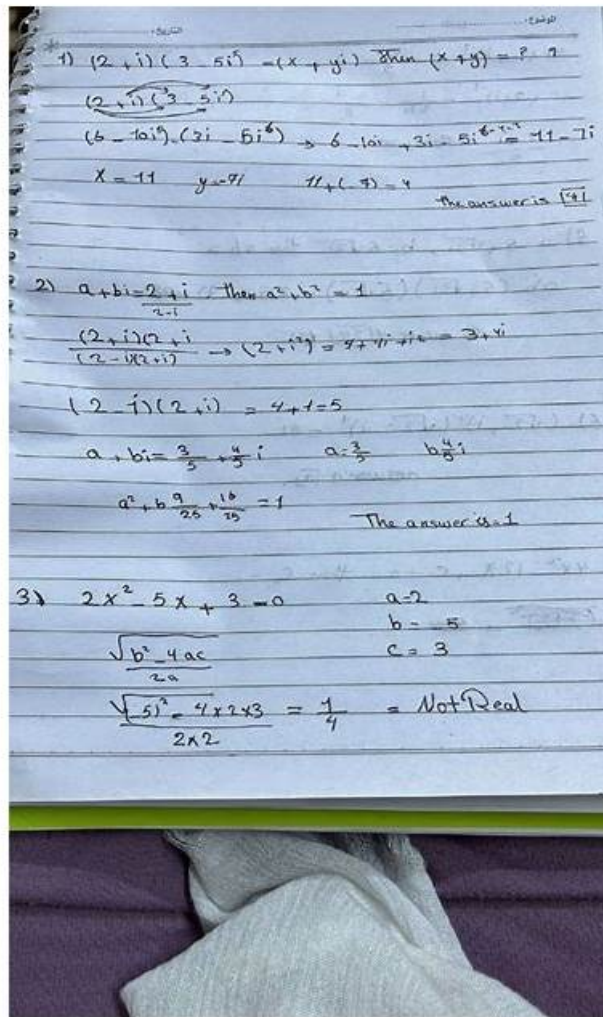

2025 Latest Actual4Labs 1z0-076 PDF Dumps and 1z0-076 Exam Engine Free Share: https://drive.google.com/open?id=1yH5zcEWZ-icovf8iT75ZkXcnTrZZ5sFn

There is a high demand for Oracle Database 19c: Data Guard Administration certification, therefore there is an increase in the number of Oracle 1z0-076 exam candidates. Many resources are available on the internet to prepare for the Oracle Database 19c: Data Guard Administration exam. Actual4Labs is one of the best certification exam preparation material providers where you can find newly released Oracle 1z0-076 Dumps for your exam preparation.

Oracle 1z0-076 Exam Syllabus Topics:

Topic	Details
Topic 1	• Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 3	• Enhanced Client Connectivity in a Data Guard Environment: This topic focuses on enhancing client connectivity in a Data Guard setup and implementing failover procedures for seamless client redirection. It also covers application continuity to ensure uninterrupted operations during role transitions.
Topic 4	• Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.

Topic 5	• Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 6	• Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 7	• Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 8	• Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 9	• Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Topic 10	• Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMGRL to monitor Data Guard configurations and explains the various data protection modes available.

2026 Test 1z0-076 Cram Pdf | Pass-Sure 1z0-076 100% Free Valid Exam Format

Achieving the Oracle 1z0-076 certificate is an excellent way of paying your way in the tech field. However, to become Oracle 1z0-076 certified, you will have to crack the Oracle 1z0-076 exam. This is a challenging task since preparation for the Oracle 1z0-076 Exam demands an inside-out understanding of 1z0-076 domains and many Oracle 1z0-076 test applicants do not have enough time due to their busy routines.

Oracle Database 19c: Data Guard Administration Sample Questions (Q17-Q22):

NEW QUESTION # 17
You notice that the SQL apply lag on your logical standby database has increased but the redo transport lag has not.
Which four could be reasons for the increase in SQL apply lag?

- A. An undersized undo tablespace on the logical standby
- B. Many SQL apply operations do full table scans
- C. An increased number of bulk updates on the primary
- D. An increased number of bulk inserts on the primary
- E. The standby redo log files are undersized on the primary database
- F. An undersized shared pool

Answer: A,B,C,F

Explanation:
The SQL apply lag on a logical standby database can be caused by several factors:
A: An undersized undo tablespace can lead to delays in SQL apply operations as it may not be able to handle the volume of undo records generated by the SQL apply process.
B: SQL apply operations that do full table scans can consume significant system resources, potentially leading to higher apply lag.
C: An increased number of bulk updates on the primary database may generate a large volume of redo data, which can cause apply lag if the logical standby cannot apply the changes quickly enough.
F: An undersized shared pool may affect the parsing and execution of SQL statements by SQL apply, which can contribute to the apply lag.
Option D is less likely to be a direct cause of SQL apply lag compared to bulk updates, as inserts generate new data rather than

modifying existing data, which SQL apply can typically handle more efficiently.
Option E is incorrect because the size of the standby redo log files on the primary database impacts redo transport lag, not SQL apply lag.

NEW QUESTION # 18
Your Data Guard environment consists of these components and settings:
1. A primary database
2. A remote physical standby database
3. Real-time query is enabled.
4. The redo transport mode is set to SYNC.
5. The protection mode is set to Maximum Availability.
You notice that queries executed on the physical standby database receive errors: ORA-03172:
STANDBY_MAX_DATA_DELAY of 15 seconds exceeded. Which two would you recommend to avoid this error?

- A. Reduce I/O latency for the storage used by the primary database.
- B. Increase the network bandwidth between the primary and standby databases.
- C. Increase the size of the buffer cache on the standby database instance.
- D. Change the protection mode to Maximum Protection.
- E. Increase the number of standby redo log files on the primary database.
- F. Change the protection mode to Maximum Performance.

Answer: A,B

Explanation:
The ORA-03172: STANDBY_MAX_DATA_DELAY error indicates that the real-time query on the physical standby database is experiencing delays beyond the specified maximum data delay threshold. Increasing the network bandwidth (Option E) can enhance the speed at which redo data is transferred from the primary to the standby database, thereby reducing the likelihood of exceeding the STANDBY_MAX_DATA_DELAY threshold. Reducing I/O latency on the primary database's storage (Option B) ensures that redo data is generated and shipped more efficiently, further mitigating the risk of delay. These actions, focused on optimizing data transfer and processing speed, address the root causes of the ORA-03172 error in a synchronous Data Guard configuration operating in Maximum Availability mode.

NEW QUESTION # 19
Which three are prerequisites for enabling Fast-Start Failover?

- A. Flashback Database must be enabled on the primary database.
- B. The Fast-Start Failover target standby database may receive REDO either synchronously or asynchronously when the configuration operates in Maximum Performance mode.
- C. A static service name must be configured only for the Fast-Start Failover target standby database.
- D. The Fast-Start Failover target standby database must receive REDO synchronously when the configuration operates in Maximum Availability mode.
- E. Flashback Database must be enabled on the Fast-Start Failover target standby database.

Answer: A,D,E

NEW QUESTION # 20
You must configure flashback database for your Oracle 19c databases that will be part of a Data Guard Broker configuration.
The databases are all in ARCHIVELOG mode.
You will execute the SQL statement:
ALTER DATABASE FLASHBACK ON;
Which three are true concerning this command?

- A. It will execute successfully while an Oracle 19c primary database is open.
- B. If executed successfully on an Oracle 19c primary database, flashback will also be enabled on all logical standby databases that are part of the configuration.
- C. It will execute successfully on an Oracle 19c logical standby database while SQL apply is active.
- D. It will execute successfully while an Oracle 19c primary database is mounted.

- E. If executed successfully on an Oracle 19c primary database, flashback will also be enabled on all physical standby databases that are part of the configuration.
- F. It will execute successfully on an Oracle 19c physical standby database while Real Time Query is active.

Answer: A,C,D

Explanation:
The command ALTER DATABASE FLASHBACK ON; enables the Flashback Database feature, which provides a way to quickly revert an entire Oracle database back to a previous point in time. This command can be executed while an Oracle 19c primary database is either open (option A) or mounted (option B). It is also applicable to an Oracle 19c logical standby database while SQL Apply is active (option E). However, it's important to note that enabling Flashback Database on the primary does not automatically enable it on all associated standby databases, whether they are physical or logical. Each database in a Data Guard configuration must have Flashback Database explicitly enabled if desired. Real Time Query being active on a physical standby does not directly relate to the ability to execute this command on the standby. Reference: The explanation is based on Oracle's concepts for Flashback Technology and Data Guard configurations as detailed in the Oracle Database Backup and Recovery User's Guide and the Oracle Data Guard Concepts and Administration guide.

NEW QUESTION # 21
Which THREE statements are true about snapshot standby databases?

- A. A snapshot standby database can have Real-Time apply enabled.
- B. A snapshot standby database may be opened read-only.
- C. FLASHBACK DATABASE is enabled automatically on a physical standby database as part of the conversion into a snapshot standby database, if not already enabled.
- D. FLASHBACK DATABASE must be manually enabled on a physical standby database before converting it into a snapshot standby database.
- E. A snapshot standby database may be opened read-write.
- F. FLASHBACK DATABASE is enabled automatically on a snapshot standby database after converting it from a physical standby database if not already enabled.

Answer: C,E,F

Explanation:
Snapshot standby databases are a feature of Oracle Data Guard that allows a physical standby database to be temporarily converted into a read-write database for testing or other purposes. The true statements about snapshot standby databases are:
* FLASHBACK DATABASE is enabled automatically on a snapshot standby database after converting it from a physical standby database if not already enabled (B): When a physical standby is converted to a snapshot standby, FLASHBACK DATABASE is automatically enabled to allow the database to be easily reverted back to its original state.
* FLASHBACK DATABASE is enabled automatically on a physical standby database as part of the conversion into a snapshot standby database, if not already enabled (C): As part of the conversion process, FLASHBACK DATABASE is turned on to ensure that changes made while the database is in snapshot standby mode can be undone.
* A snapshot standby database may be opened read-write (E): Once a physical standby is converted to a snapshot standby, it can be opened for read-write operations, allowing for testing and other tasks that require a writable database.

NEW QUESTION # 22
......

Actual4Labs Oracle 1z0-076 Practice Test dumps can help you pass IT certification exam in a relaxed manner. In addition, if you first take the exam, you can use software version dumps. Because the SOFT version questions and answers completely simulate the actual exam. You can experience the feeling in the actual test in advance so that you will not feel anxious in the real exam. After you use the SOFT version, you can take your exam in a relaxed attitude which is beneficial to play your normal level.
