They can easily cover the exam topics with more practice due to the unique set of AZ-400 exam dump. The AZ-400 certification learning is getting popular with the passage of time.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q479-Q484):

NEW QUESTION # 479

You have an Azure Repos repository that contains large PSD files. You need to configure Git LFS to manage all the files. How should you complete the script? To answer, drag the appropriate access levels to the correct groups. Each access level may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point.

Values

- git fetch
- git lfs config add "*.psd"
- git lfs migrate import --include "*.psd" --everything
- git lfs track "*.psd"
- git lfs update
- git push

Answer Area

```
---
git lfs install
Value
git add .gitattributes
git commit -m "track *.psd files using Git LFS"
Value
Value
---
```

Answer:

Explanation:

Values

- git fetch
- git lfs config add "*.psd"
- git lfs migrate import --include "*.psd" --everything
- git lfs track "*.psd"
- git lfs update
- git push

Answer Area

```
---
git lfs install
git lfs track "*.psd"
git add .gitattributes
git commit -m "track *.psd files using Git LFS"
git lfs migrate import --include "*.psd" --everything
git lfs update
---
```

NEW QUESTION # 480

You need to use Azure Automation State Configuration to manage the ongoing consistency of virtual machine configurations. Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. NOTE: More than one order of answer choices is correct. You will receive credit for any of the orders you select.

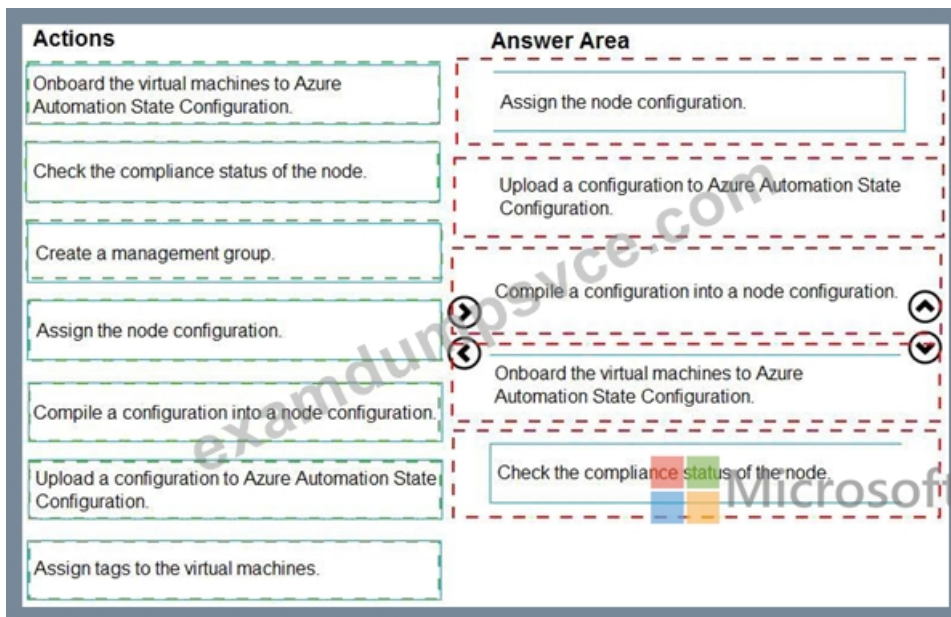

Actions

- Onboard the virtual machines to Azure Automation State Configuration.
- Check the compliance status of the node.
- Create a management group.
- Assign the node configuration.
- Compile a configuration into a node configuration.
- Upload a configuration to Azure Automation State Configuration.
- Assign tags to the virtual machines.

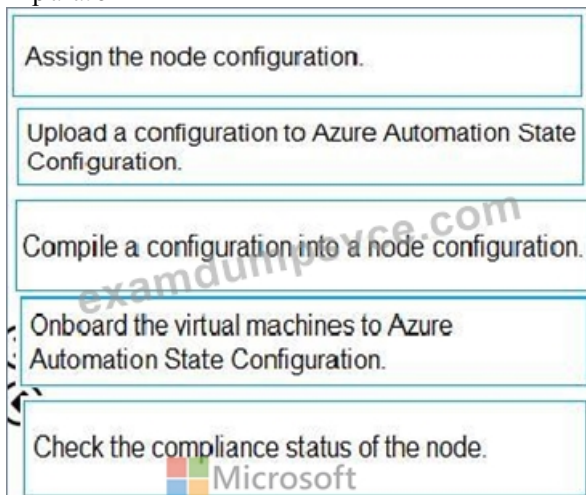

Answer Area

Answer:

Explanation:

Explanation

Step 1: Assign the node configuration.

You create a simple DSC configuration that ensures either the presence or absence of the Web-Server Windows Feature (IIS), depending on how you assign nodes.

Step 2: Upload a configuration to Azure Automation State Configuration.

You import the configuration into the Automation account.

Step 3: Compiling a configuration into a node configuration

Compiling a configuration in Azure Automation

Before you can apply a desired state to a node, a DSC configuration defining that state must be compiled into one or more node configurations (MOF document), and placed on the Automation DSC Pull Server.

Step 4: Onboard the virtual machines to Azure State Configuration

Onboarding an Azure VM for management with Azure Automation State Configuration Step 5: Check the compliance status of the node.

Viewing reports for managed nodes. Each time Azure Automation State Configuration performs a consistency check on a managed node, the node sends a status report back to the pull server. You can view these reports on the page for that node.

On the blade for an individual report, you can see the following status information for the corresponding consistency check:

The report status - whether the node is "Compliant", the configuration "Failed", or the node is "Not Compliant" (when the node is in ApplyandMonitor mode and the machine is not in the desired state).

NEW QUESTION # 481

Your company uses Azure Artifacts for package management.

You need to configure an upstream source in Azure Artifacts for Python packages.

Which repository type should you use as an upstream source?

- A. PyPI
- B. third-party trusted Python
- C. Maven Central
- D. npnjs.org

Answer: A

Explanation:

Get started with Python packages in Azure Artifacts

Create a feed

* Select Artifacts (in the left navigation of your Azure DevOps project).

* On the Artifacts page, select Create Feed.

* In the Create new feed dialog box:

In the Name field, give the feed a name.

PyPI is the default repository name for twine, which is a tool for publishing Python packages.

<https://docs.microsoft.com/en-us/azure/devops/artifacts/quickstarts/python-packages>

NEW QUESTION # 482

You have project in Azure DevOps.

You create the following template named Template1.yml.

```
steps:
- script: npm install
- script: yarn install
- script: npm run compile
```

You create the following pipeline named File1.yml.

```
parameters:
usersteps:
- task: MyTask@1
- script: echo Done
```

You need to ensure that Template1.yml runs before File1.yml.

How should you update File1.yml?

A. `parameters: usersteps: extends: template: template1.yml - task: MyTask@1 - script: echo Done`

B. `extends: template: template1.yml parameters: usersteps: - task: MyTask@1 - script: echo Done`

C. `parameters: usersteps: - template: template1.yml - task: MyTask@1 - script: echo Done`

D. `template: template1.yml parameters: usersteps: - task: MyTask@1 - script: echo Done`

- A. Option B
- B. Option A
- C. Option D
- D. Option C

Answer: A

NEW QUESTION # 483

Your company develops a client banking application that processes a large volume of data. Code quality is an ongoing issue for the company. Recently, the code quality has deteriorated because of an increase in time pressure on the development team. You need to implement static code analysis. During which phase should you use static code analysis?

- A. build
- **B. integration testing**
- C. production release
- D. staging

Answer: B

Explanation:

The Secure Development Lifecycle (SDL) Guidelines recommend that teams perform static analysis during the implementation phase of their development cycle.

Note: The company should focus in particular on the implementation of DevOps tests to assess the quality of the software from the planning stage to the implementation phase of the project.
