Reliable SolarWinds SCP-NPM Braindumps Sheet, SCP-NPM Valid Exam Duration

Without a doubt, there is one thing that can assist them with perceiving this interest and clearing their SolarWinds Network Performance Monitor (NPM) Exam (SCP-NPM) exam with flying colors. SolarWinds SCP-NPM dumps merge all that gigantic and the competitor doesn't require to purchase the aide or different books to review. They have this test material and need nothing else for planning SolarWinds Network Performance Monitor (NPM) Exam exam.

The SCP-NPM Certification Exam is recognized by the IT industry as a valuable credential for IT professionals who want to demonstrate their expertise in network performance monitoring and management. It is a valuable credential for IT professionals who want to advance their careers in network administration, network engineering, and IT management. SolarWinds Network Performance Monitor (NPM) Exam certification also demonstrates to employers that the candidate has the knowledge and skills to manage complex networks and ensure their optimal performance.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions

(Q35-Q40):

NEW QUESTION # 35

The Universal Device Poller retrieves management data in which format?

- A. ANSI 1
- B. WMI
- C. XML
- **D. OID**

Answer: D

Explanation:

The Universal Device Poller (UnDP) is a feature of SolarWinds NPM that allows you to create custom monitors for almost any statistic provided by SNMP based on its Management Information Base (MIB) and object identifier (OID). An OID is a unique identifier for a variable that can be polled or set via SNMP. The UnDP retrieves management data in the OID format from the devices that support SNMP. The other formats (WMI, XML, ANSI 1) are not used by the UnDP. References:

Monitor custom statistics based on OIDs with Universal Device Pollers

NEW QUESTION # 36

Your network has critical devices on the opposite side of a WAN link from your SolarWinds server. You do not want alerts about the devices if the router (name = "target") that connects your SolarWinds server to the remote site is down. How do you configure Alert Suppression?

- A. Suppress alert when all of the following apply: Node Name is equal to "target" / Interface Status is equal to "Warning"
- B. Suppress alert when any of the following apply: Node Name is equal to "target" / Node Status is equal to "Warning"
- **C. Suppress alert when all of the following apply: Node Name is equal to "target" / Node Status is equal to "Down"**
- D. Suppress alert when any of the following apply: Node Name is equal to "target" / Interface Status is equal to "Down"

Answer: C

Explanation:

Alert suppression is a feature that allows you to create conditions that prevent an alert from being triggered or sent if certain criteria are met. This can help you avoid receiving multiple or unnecessary alerts from a single event or a complex situation. For example, if you have a router that connects your SolarWinds server to a remote site with critical devices, you may not want to receive alerts about those devices if the router is down, as the problem is not with the devices but with the router. In this case, you can configure alert suppression to suppress the alerts for the devices if the router is down. To do this, you need to select the option "Suppress the alert if all of the following apply" and add the conditions "Node Name is equal to 'target'" and "Node Status is equal to 'Down'". This means that the alert will be suppressed only if both conditions are true, i.e., the router with the name 'target' is down. If the router is up or has a different name, the alert will not be suppressed. References: Alert suppression - SolarWinds; Alert Suppression - Forum - Network Performance Monitor (NPM) - THWACK

NEW QUESTION # 37

You can display Palo Alto firewalls on Orion Maps.

- A. False
- **B. True**

Answer: B

NEW QUESTION # 38

How many agents does NPM require for Quality of Experience, NetPath, and system monitoring on the same Windows server?

- A. 0
- B. 1

- C. 2
- D. 3

Answer: C

Explanation:

NPM requires only one agent for Quality of Experience, NetPath, and system monitoring on the same Windows server. The agent is a software component that collects data from the server and sends it to the Orion server¹. The agent can perform multiple tasks, such as packet analysis, network path analysis, and system health monitoring, depending on the configuration and the license². You can install the agent on the server either manually or remotely from the Orion Web Console³. NEW QUESTION # 39

When you configure a report, you can limit access to specific users.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

When you configure a report in the SolarWinds Platform Web Console, you can limit access to specific users by assigning a report limitation category to the report and to the user account. A report limitation category is a custom label that defines which reports a user can see. For example, you can create a "finance" category and assign it to the reports and users related to the finance department. Users with the "finance" category can only access the reports with the same category, and not the reports with other categories, such as "marketing" or

"IT". You can also prevent users from accessing any reports by applying the "No Reports" limitation to their account, or allow administrators to see all reports by applying the "No Limitation" category to their account. References: Restrict who can access reports in the SolarWinds Platform, Define what users can access and do in the SolarWinds Platform

NEW QUESTION # 40

.....

The format name of SolarWinds SCP-NPM practice test questions is SolarWinds PDF Questions file, desktop practice test software, and web-based practice test software. Choose the nay type of SolarWinds Network Performance Monitor (NPM) Exam SCP-NPM Practice Exam Questions that fit your SCP-NPM exam preparation requirement and budget and start preparation without wasting further time.
