Pass4guide was established in 2008, now we are the leading position in this field as we have good reputation of high-pass-rate CCSK guide torrent materials. Our CCSK exam questions are followed by many peers many years but never surpassed. We build a mature and complete CCSK learning guide R&D system, customers' information safety system & customer service system since past 10 years. Every candidate who purchases our valid CCSK Preparation materials will enjoy our high-quality guide torrent, information safety and golden customer service.

Our CCSK study materials can provide you with multiple modes of experience, there are three main modes to choose from: PDF, Software and Online. Firstly, the PDF version is printable. Secondly, the Software version of CCSK exam questions can simulate the real exam environment to give you exam experience more vividly. Thirdly, the online version supports all web browsers so that it can be worked on all the operating systems. And our CCSK Study Materials will help you in a more relaxed learning atmosphere to pass the CCSK exam.

Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q272-Q277):

NEW QUESTION # 272

What is a primary benefit of implementing Zero Trust (ZT) architecture in cloud environments?

- A. Eliminating the need for multi-factor authentication.
- B. Increased attack surface and complexity.
- **C. Reduced attack surface and simplified user experience.**
- D. Enhanced privileged access for all users.

Answer: C

Explanation:

Zero Trust (ZT) security architecture is a modern cloud security approach that operates on the principle of "Never Trust, Always Verify."

Primary Benefits of Zero Trust in Cloud:

- * Minimizes Attack Surface
- * Traditional security models assume trust within an internal network.
- * Zero Trust eliminates implicit trust and enforces continuous verification of user identities.
- * Reduces the risk of data breaches, insider threats, and lateral movement attacks.
- * Strong Authentication & Access Controls
- * Multi-Factor Authentication (MFA) & Just-in-Time (JIT) access are mandatory in Zero Trust models.

- * Uses context-based access policies (device, location, behavior analytics) to enforce adaptive security.
- * Micro-Segmentation & Least Privilege Access
- * Restricts access to only necessary applications, minimizing lateral movement in cloud environments.
- * Micro-segmentation isolates workloads, reducing the impact of breaches.
- * Cloud-Native Zero Trust Integration
- * Cloud providers (AWS, Azure, Google Cloud) offer Zero Trust Network Access (ZTNA) solutions.
- * Cloud Security Posture Management (CSPM) continuously scans cloud environments for security compliance.

This aligns with:

- * CCSK v5 - Security Guidance v4.0, Domain 12 (Identity, Entitlement, and Access Management)
- * Zero Trust Cloud Security Architecture (CSA Zero Trust Working Group).

NEW QUESTION # 273

What primary aspects should effective cloud governance address to ensure security and compliance?

- A. Encryption, redundancy, data integrity, and scalability
- **B. Decision making, prioritization, monitoring, and transparency**
- C. Service availability, disaster recovery, load balancing, and latency
- D. Authentication, authorization, accounting, and auditing

Answer: B

Explanation:

Effective cloud governance focuses on managing and overseeing cloud resources to ensure that security, compliance, and business objectives are met. Key aspects include:

Decision making: Establishing clear processes for how decisions are made regarding cloud resource usage, security measures, and compliance strategies.

Prioritization: Ensuring that critical security and compliance risks are prioritized and addressed first.

Monitoring: Continuously monitoring cloud environments for security threats, performance issues, and compliance violations.

Transparency: Ensuring that governance activities are visible to stakeholders, enabling accountability and making it easier to demonstrate compliance with laws, regulations, and internal policies.

These aspects help organizations maintain control over their cloud environments while ensuring they meet security and regulatory requirements.

NEW QUESTION # 274

Logs, documentation, and other materials needed for audits and compliance and often serve as evidence of compliance activities are known as:

- **A. Artifacts**
- B. Log Trail
- C. Documented Evidence
- D. Proof of Audit

Answer: A

Explanation:

Artifacts are the logs, documentation, and other materials needed for audits and compliance; they are the evidence to support compliance activities. Both providers and customers have responsibilities for producing and managing their respective artifacts.

NEW QUESTION # 275

Which plane in a network architecture is responsible for controlling all administrative actions?

- A. Application plane
- B. Data plane
- **C. Management plane**
- D. Forwarding plane

Answer: C

Explanation:

The Management plane in a network architecture is responsible for controlling all administrative actions, including configuration, management, monitoring, and maintenance of network devices and services. It provides the interface for administrators to interact with the network, perform system management tasks, and enforce policies.

The management plane typically includes functions such as:

Configuration management

Monitoring and logging

Administrative access control

Policy enforcement

In the context of cloud environments, the management plane also includes APIs and web-based consoles that allow administrators to manage virtual resources. Due to its critical role in controlling network and system settings, securing the management plane is of utmost importance to prevent unauthorized access and potential control over the entire network infrastructure.

Why Other Options Are Incorrect:

A . Forwarding plane: Responsible for the actual forwarding of data packets through the network based on predefined rules. It does not handle administrative functions.

C . Data plane: Responsible for data transmission and the forwarding of packets through the network but does not involve management tasks.

D . Application plane: This is not a commonly used term in network architecture, and it generally refers to application-specific functions rather than network administration.

NEW QUESTION # 276

Which one of the following is NOT one of the phases for cloud auditing?

- A. Conduct Audit
- B. Define Audit objectives
- C. Report data breaches
- D. Report lesson learned

Answer: C

Explanation:

Reporting data breaches is not part of Auditing and not a function of Auditors.
