Any ambiguous points may cause trouble to exam candidates. So clarity of our H13-527_V5.0 training materials make us irreplaceable including all necessary information to convey the message in details to the readers. All necessary elements are included in our H13-527_V5.0 practice materials. Effective H13-527_V5.0 exam simulation can help increase your possibility of winning by establishing solid bond with you, help you gain more self-confidence and more success.

Huawei H13-527_V5.0 Exam Syllabus Topics:

Section	Objectives
Topic 1: Storage and Network Services	- Cloud storage types and usage scenarios - Cloud networking and VPC concepts
Topic 2: Cloud Computing Fundamentals	- Cloud computing concepts and characteristics - Cloud service models (IaaS, PaaS, SaaS)
Topic 3: Cloud Security and O&M	- Monitoring, logging, and maintenance - Identity and access management
Topic 4: Virtualization and Computing Services	- Virtual machine lifecycle management - Compute service deployment and scaling
Topic 5: Huawei Cloud Architecture	- Resource management and service components - Huawei Cloud infrastructure overview

Quiz 2026 H13-527_V5.0: HCIP-Cloud Computing V5.0 – High Pass-Rate Valid Vce

The Getcertkey is a reliable platform that is committed to making your preparation for the Huawei H13-527_V5.0 examination easier and more effective. To meet this objective, the Getcertkey is offering updated and real HCIP-Cloud Computing V5.0 H13-527_V5.0 exam dumps. These Huawei H13-527_V5.0 Exam Questions are approved by experts. They work together and analyze the examination content to compile most probable H13-527_V5.0 real dumps in three formats. These Huawei Exams questions will surely appear in the next Huawei H13-527_V5.0 test.

Huawei HCIP-Cloud Computing V5.0 Sample Questions (Q61-Q66):

NEW QUESTION # 61

Service Center is ManageOne's entrance for tenants and operation management. It can transform enterprise IT services from passive service mode to active service and self-service mode.

- A. False
- **B. True**

Answer: B

NEW QUESTION # 62

Which of the following descriptions of Neutron virtual switches is incorrect?

- **A. The virtual switch uses a virtual network card to connect to the physical switch**
- B. Virtual switches are usually installed on computing nodes and network nodes
- C. Virtual machine instances on the computing nodes and network elements on the network nodes are connected to the virtual switch
- D. A virtual switch connects a virtual network port to a physical network

Answer: A

NEW QUESTION # 63

In FusionAccess, when making a virtual machine template, you need to install the operating system after installing it, otherwise the network card information will not be obtained.

Answer:

Explanation:
Tools

NEW QUESTION # 64

In HUAWEI CLOUD Stack, to view details about a specific instance, you can run openstack server ____ < server > . The < server > parameter specifies the instance ID or name. Which of the following parameters should be entered in the blank?

- A. query
- B. conf
- **C. show**
- D. list

Answer: C

Explanation:

The correct answer is C. show . Official OpenStack command-line documentation explicitly lists the command openstack server show < server > and explains that it is used to show server details . The same documentation states that the < server > argument represents the server name or ID , which matches the wording in your question exactly.

The other options are not correct in this context. openstack server list displays a list of servers rather than the details of one specific instance. query and conf are not valid standard subcommands for this OpenStack server-detail operation. Since HUAWEI CLOUD Stack operations in this area follow OpenStack command syntax for instance inspection and lifecycle management, the proper command for viewing one instance's details is openstack server show < server > .

Therefore, after correcting the sentence format, the blank should be filled with show , and the full verified command is openstack server show < server > . That makes the correct answer C .

NEW QUESTION # 65

After OpenStack introduced P lacement, the scheduling process in Nova evolved to require a pre- screening through P lacement, that is, nova-scheduler sends a request to Placement to obtain the Resource Provider that meets the initial resource requirements and the corresponding resource allocation.

- Answer: B**
