What is the correct workflow?

- A. Click the "Add to Dashboard" button (often a dashboard icon or "Add to" menu) in the Interactive Analytics query bar. Select the target dashboard ("Security Operations"), give the widget a name, and click Save.

- D. Take a screenshot and upload it to the dashboard.

NEW QUESTION # 303
When configuring a Collector Group for a "Multi-Site" deployment where the two sites have a high- latency link (100ms), what is the best practice regarding the placement of the Cloud Proxies within that group?

- A. Put all Cloud Proxies in Site A to centralize management.
- B. Do not span a single Collector Group across high-latency WAN links. Create separate Collector Groups for each site (e.g., "Group-SiteA" and "Group-SiteB") and pin the local adapters to the local group to ensure data is collected and buffered locally.
- C. Span the Collector Group across Site A and Site B to create a "Stretched Collector".
- D. Use a "Witness Proxy" in the cloud to bridge the group.

Answer: B

NEW QUESTION # 304
A Security Auditor requires that all logs tagged with event_type = "Security_Audit" be sent in real- time to a third-party SIEM (e.g., Splunk) for compliance analysis. The rest of the operational logs should remain only in VCF Operations for Logs.
Where is this selective forwarding configured?

- A. By editing the liagent.ini file on every source VM.
- B. Administration -> Management -> Access Control.
- C. Administration -> Log Management -> Event Forwarding. In this section, the administrator can create a New Destination, specify the SIEM's IP/Port, and most importantly, add a Filter to matching only events where event_type equals Security_Audit.
- D. Using a vRealize Orchestrator workflow.

Answer: C

NEW QUESTION # 305
Which metric does VCF Operations primarily use to determine if a VM is "Powered Off" for the purpose of reclamation?

- A. sys|uptime
- B. sys|poweredOffTime (or System|Powered Off Time). This counter tracks the duration (in seconds/minutes/days) since the VM's power state last transitioned to "Off".
- C. cpu|usage_average
- D. disk|iops

Answer: B

NEW QUESTION # 306
A cluster currently shows "365+ Days Remaining" of capacity. The administrator modifies the Capacity Policy setting for "Time Remaining Calculation" from "Average Usage" to "Conservative".
Result
The forecast immediately drops to "45 Days Remaining".
What does this drastic change indicate about the workload profile?

- A. The workloads exhibit high volatility (spiky behavior). The "Average" setting smoothed out the spikes, making the cluster look empty. The "Conservative" setting uses the upper-bound (Peak) usage values for calculation, revealing that during peak times, the cluster is actually heavily utilized and nearing saturation.
- B. The new setting applied a 50% buffer to all resources.
- C. The cluster is oversized.
- D. The policy change corrupted the database.

Answer: A
