SAPのC-S4CPB-2502試験の準備をしていたら、CertShikenは貴方が夢を実現することにヘルプを与えます。CertShikenのSAPのC-S4CPB-2502試験トレーニング資料は高品質のトレーニング資料で、100パーセントの合格率を保証できます。もしあなたが適当な時間を持って勉強できるのなら、CertShikenのSAPのC-S4CPB-2502試験トレーニング資料を選びましょう。この資料を手に入れたら、楽に試験の準備をすることができます。

SAP C-S4CPB-2502 認定試験の出題範囲：

トピック	出題範囲
トピック 1	Extensibility and Integration: This section of the exam measures skills of SAP Cloud ERP Consultant and deals with the capabilities of extending SAP applications to meet custom business requirements and integrating with other systems or services. The focus is on knowing when to extend standard functionality and how to ensure smooth system integration in a cloud context.
トピック 2	System Landscapes and Identity Access Management: This section of the exam measures skills of SAP Cloud ERP Consultant and involves understanding SAP's system landscape in the cloud, including tenants and environments. It also focuses on identity and access management, covering how user roles, permissions, and security are managed across the cloud ecosystem.
トピック 3	Configuration and the SAP Fiori Launchpad: This section of the exam measures skills of SAP Cloud ERP Consultant and focuses on setting up system configurations in SAP Cloud ERP and understanding how to manage user navigation and interface personalization through the SAP Fiori Launchpad. It tests the consultant's ability to configure and align user experience with business roles.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition 認定 C-S4CPB-2502 試験問題 (Q13-Q18):

質問 # 13

How does an implementation consultant support customer experts during Fit-to-Standard workshops? Note: There are 2 correct answers to this question

- **A. Highlight areas that require configuration or customization decisions.**
- B. Conduct end-user training on active scope items.
- **C. Demonstrate SAP Best Practice business processes in the starter system**
- D. Determine set up instructions for customer-driven integrations.

正解: A、C

解説:

During the Fit-to-Standard workshops, an implementation consultant supports customer experts by doing the following:

* Demonstrate SAP Best Practice business processes in the starter system. The consultant shows the customer experts how the standard processes work in SAP S/4HANA Cloud Public Edition and how they fit their business needs¹.

* Highlight areas that require configuration or customization decisions. The consultant identifies and documents the gaps between the standard processes and the customer requirements, and proposes solutions that are aligned with the cloud mindset¹.

The other options are not the correct ways to support customer experts during the Fit-to-Standard workshops. Determining set up instructions for customer-driven integrations is done in the integration phase, after the Fit-to-Standard workshops are completed².

Conducting end-user training on active scope items is done in the deploy phase, before the go-live of the system³. References = Conducting Fit-to-Standard Workshops - SAP Learning, SAP S/4HANA Cloud Public Edition - Integration, Deploying SAP S/4HANA Cloud Public Edition.

質問 # 14

Which tasks are mandatory before you can migrate data for a specific object? Note: There are 2 correct answers to this question.

- A. All previous migration projects are in the "Finished" status
- B. You select the same migration method previously used for other objects
- **C. Permission to migrate the data has been assigned**
- **D. Predecessor objects have been migrated**

正解: C、D

解説:

Before you can migrate data for a specific object, you need to ensure that the following tasks are completed:

* Predecessor objects have been migrated: Some migration objects depend on other migration objects that need to be migrated first. For example, before you can migrate sales orders, you need to migrate customers, products, and pricing conditions. You can check the dependencies of migration objects in the Migration Cockpit or in the Migration Object Modeler^{1,2}.

* Permission to migrate the data has been assigned: In addition to having permission to access the Migrate Your Data app, you need permission to migrate each type of data. This is because the Migration Cockpit tool uses the same APIs and technical checks that would be done if you were to create a new data value through the respective application. For example, if you need to create a new bank record in your system, you would use the application, Manage Banks - Master Data. The app would present you with several fields capturing information about the new bank to create the record in your system. Now if you need to create 1,000 banks, it wouldn't be feasible to create each through the Manage Banks - Master Data app one-by-one. Therefore, you need to have the permission to use the Manage Banks - Master Data app in order to migrate bank data using the Migration Cockpit³.

The other tasks are not mandatory before you can migrate data for a specific object. You can select different migration methods for different objects, depending on your source system and data format. You can also have multiple migration projects in progress at the same time, as long as they do not contain the same migration objects⁴. /4HANA Cloud, Public Edition

質問 # 15

You want to restrict end user activities for an application.

Where would you look up the business catalog(s) that grant access to the app?

- A. In the SAP Fiori Apps Reference Library
- B. In the Configure Your Solution app
- C. In the Define Your Scope app
- D. In the App Finder app

正解: A

質問 # 16

Which of the following actions does the lead configuration expert carry out during the content deployment phase in the SAP S/4HANA Cloud starter system? Note: There are 3 correct answers to this question.

- A. Confirm primary finance settings
- B. Define the scope
- C. Confirm primary HCM settings
- D. Create two projects
- E. Confirm primary logistics settings

正解: B、D、E

解説:

For implementing SAP S/4HANA Cloud Public Edition for a customer, the following systems are commonly used:

* Sandbox system: This system is used in the very early stages of the project for exploration and trying out different configurations without affecting the development or production environments. It's a safe space for experimentation.

* Development system: This system is where the initial setup and customizations are made. Configuration changes, custom development, and extensions are carried out here before being moved to the test system for further testing.

* Test system: After configurations and developments are done in the development system, they are transported to the test system. This environment is used for rigorous testing to ensure that everything works as expected and to identify any issues before moving to the production environment.

These systems play crucial roles in the implementation process, allowing for a structured and phased approach to setting up, customizing, testing, and finally deploying SAP S/4HANA Cloud Public Edition.

質問 # 17

Which of the following requirements need to be documented in SAP Cloud ALM during the Fit-to-Standard workshops? Note: There are 2 correct answers to this question.

- A. A process flow diagram
- B. An SAP Fiori app customization
- C. A configuration value
- D. A business role restriction

正解: B、D
