## CompTIA A+ Certification Exam: Core 2 Sample Questions (Q51-Q56):

### NEW QUESTION # 51

A support specialist needs to decide whether to install a 32-bit or 64-bit OS architecture on a new computer. Which of the following specifications will help the specialist determine which OS architecture to use?

- A. 1Gbps Ethernet
- **B. Intel i7 CPU**
- C. 500GB HDD
- D. 16GB RAM

**Answer: B**

Explanation:

The CPU's architecture determines whether it can run a 64-bit OS. Most Intel i7 processors are 64-bit capable, whereas simply knowing the amount of RAM (e.g., 16 GB) doesn't guarantee the processor supports 64-bit operations. Once you confirm the CPU is 64-bit (as with an Intel i7), you can install a 64-bit OS to fully utilize available memory.

### NEW QUESTION # 52

A user hears an unexpected noise coming from their desktop computer. To troubleshoot the issue, a technician needs to open the case. Which of the following actions should the technician take next?

- A. Ground the system
- B. Remove any peripheral devices
- **C. Disconnect the power**
- D. Open the system cover

**Answer: C**

Explanation:

The correct answer is C. Disconnect the power, because safety is the first priority when working inside a computer case. Before opening the system, all power sources must be removed to prevent electrical shock and hardware damage.

According to the Quentin Docter - CompTIA A+ Complete Study Guide, technicians should always shut down the system and disconnect the power cable before opening a computer. Even powered-off systems can still carry electrical current if they remain plugged in.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide explains that unexpected noises are often caused by fans, loose cables, or failing hard drives. Opening the case while the system is powered can cause injury or damage sensitive components.

The Mike Meyers / Mark Soper Lab Manual reinforces the standard safety sequence: power off the system, unplug it, discharge residual power, and then apply grounding measures before touching internal components.

Because disconnecting power eliminates electrical hazards and protects both the technician and the equipment, C is the correct answer.

### NEW QUESTION # 53

Which of the following filesystems supports read and write operations for Windows, macOS, and Linux?

- A. ext4
- B. APFS
- **C. exFAT**
- D. ReFS
- E. NTFS

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

exFAT is the only listed file system that supports both read and write access across Windows, macOS, and Linux (with appropriate drivers). It's optimized for flash storage and external drives.

From All-in-One Exam Guide:

"exFAT is a lightweight file system with cross-platform read/write support, ideal for use on removable drives when compatibility is

essential."

#### NEW QUESTION # 54

Which of the following file types allows macOS users to uninstall software completely by placing the file in the Trash?

- A. .exe
- B. .app
- C. .pkg
- D. .rpm
- E. .msi

**Answer: B**

Explanation:

In macOS, many applications are distributed as application bundles that appear as a single .app file in the Applications folder. Because the app's executable and supporting resources are contained inside that bundle, uninstalling is often as simple as moving the .app bundle to the Trash. Quentin Docter explains that an APP file ends in .app and is a container holding the executable plus resource files/folders, and he describes the uninstall process as selecting the application in the Applications folder and choosing File # Move to Trash, which removes it from the operating system's available apps list. The All-in-One guide also states that for most non-App Store macOS apps, removal is typically done by dragging the app to the Trash, with uninstallers only sometimes provided for larger apps. Mike Meyers' Lab Manual reinforces this: "other software can be removed...by simply dragging the app to the Trash." By contrast, .msi and .exe are Windows installers, .rpm is a Linux package format, and .pkg is a macOS installer package (not what you trash to uninstall).

References: Quentin Docter - CompTIA A+ Complete Study Guide (APP container and uninstall via Move to Trash); Travis Everett & Andrew Hutz - CompTIA A+ All-in-One Exam Guide (drag app to Trash for removal; leftovers possible); Mark Soper - Mike Meyers' A+ Lab Manual (remove by dragging app to Trash).

#### NEW QUESTION # 55

A company wants to use its directory database to authenticate users to its wireless network. Which of the following should the company use to accomplish this task?

- A. WPA3
- B. LDAP
- C. MFA
- D. RADIUS

**Answer: D**

Explanation:

RADIUS allows integration with directory databases to authenticate users to the wireless network.
