SPLK-1002 Practice Test Online, SPLK-1002 Latest Test Question

Are you preparing for the Splunk certification recently? Maybe the training material at your hands is wearisome and dull for you to study. Here VCEPrep will give you a very intelligence and interactive SPLK-1002 study test engine. SPLK-1002 test engine can simulate the examination on the spot. As some statistics revealed, the bad result not only due to the poor preparation, but also the anxious mood. Now, our SPLK-1002 Simulated Test engine can make you feel the actual test environment in advance. Besides, the high quality SPLK-1002 valid exam dumps will help you prepare well. You can must success in the SPLK-1002 real test.

Splunk Core Certified Power User Exam Sample Questions (Q135-Q140):

NEW QUESTION # 135

When you run a search, fast mode extracts all fields very quickly

- A. True
- B. False

Answer: A

NEW QUESTION # 136

What is the purpose of a calculated field?

- A. To automatically add fields to the index using an eval expression rather than manually including an eval command.
- **B. To automatically add fields at search time using an eval expression rather than manually including an eval command.**
- C. To manually add fields at search time and check for syntax errors.
- D. To manually add and remove fields at search time related to statistical functions.

Answer: B

Explanation:

A calculated field in Splunk is designed to automatically add fields at search time using an eval expression. This feature allows users to define new fields based on existing data without needing to manually include an eval command in every search. Calculated fields simplify repeated search tasks by embedding the eval logic directly into the field configuration.

NEW QUESTION # 137

When using the transaction command, what does the argument maxspan do?

- A. Sets the maximum length that any single event can reach to be included in the transaction.
- **B. Sets the maximum total time between the earliest and latest events in a transaction.**
- C. Sets the maximum total time between events in a transaction.
- D. Sets the maximum length of all events within a transaction.

Answer: B

NEW QUESTION # 138

In which of the following scenarios is an event type more effective than a saved search?

- A. When the search string needs to be used in future searches.
- **B. When a search needs to be added to other users' dashboards.**
- C. When a search should always include the same time range.
- D. When formatting needs to be included with the search string.

Answer: B

Explanation:

NEW QUESTION # 139

What approach is recommended when using the Splunk Common Information Model (CIM) add-on to normalize data?

- A. Consult the CIM event type reference tables.
- B. Run a search using the correlation command.
- **C. Consult the CIM data model reference tables.**
- D. Run a search using the authentication command.

Answer: C

Explanation:

The recommended approach when using the Splunk Common Information Model (CIM) add-on to normalize data is A. Consult the CIM data model reference tables. This is because the CIM data model reference tables provide detailed information about the fields and tags that are expected for each dataset in a data model. By consulting the reference tables, you can determine which data models are relevant for your data source and how to map your data fields to the CIM fields. You can also use the reference tables to validate your data and troubleshoot any issues with normalization. You can find the CIM data model reference tables in the Splunk documentation¹ or in the Data Model Editor page in Splunk Web². The other options are incorrect because they are not

related to the CIM add-on or data normalization. The authentication command is a custom command that validates events against the Authentication data model, but it does not help you to normalize other types of data. The correlation command is a search command that performs statistical analysis on event fields, but it does not help you to map your data fields to the CIM fields. The CIM event type reference tables do not exist, as event types are not part of the CIM add-on.

NEW QUESTION # 140
