Try our demo products and realize the key advantages coming through our GH-900 products. Our demo products are quite useful for sketching out the real competence of our actual products. You can estimate the real worth of our GH-900 products, once you go through our free trial products. Free demos experience pre determines what you are really purchasing and what benefits you can acquire through our GH-900 products.

Microsoft GH-900 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none">• Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI• CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects. |
| Topic 2 | <ul style="list-style-type: none">• Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests. |

| | |
|---------|--|
| Topic 3 | <ul style="list-style-type: none"> Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews. |
| Topic 4 | <ul style="list-style-type: none"> Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects. |

Microsoft GitHub Foundations Sample Questions (Q24-Q29):

NEW QUESTION # 24

How can a user highlight a post to the top of the Discussions page?

- A. Save the discussion.
- B. Pin the discussion.**
- C. Star the discussion.
- D. Create an issue from the discussion.

Answer: B

Explanation:

To highlight a post at the top of the Discussions page on GitHub, you can Pin the discussion. Pinning a discussion ensures it remains prominently visible at the top of the list, making it easier for others to find and participate in that discussion. This is particularly useful for important announcements or frequently referenced topics.

NEW QUESTION # 25

What is GitHub?

- A. A platform that focuses on facilitating the growth and sharing of code, specifically designed for new developers to hone their skills
- B. A proprietary software platform for nurturing creativity in developers and building a technology community
- C. A cloud-based hosting service for version control and collaboration, focused on creating a safe and collaborative environment for developers**
- D. A centralized version control system designed for nurturing a community of developers and providing access to open source projects

Answer: C

Explanation:

GitHub is a cloud-based platform that provides hosting for software development and version control using Git. It offers tools for collaboration, project management, and security to create a safe and productive environment for developers.

GitHub Overview:

Option B is correct because GitHub is primarily known as a cloud-based hosting service for Git repositories, offering a collaborative environment where developers can work together on projects, manage version control, and implement security practices.

Incorrect Options:

Option A is incorrect because GitHub is not proprietary in the sense of being closed off from version control standards; it is widely recognized as an open platform for collaboration.

Option C is incorrect because, while GitHub is accessible to new developers, it is designed for developers of all skill levels and not specifically tailored for beginners.

Option D is incorrect because GitHub is not a centralized version control system; it supports Git, which is distributed.

NEW QUESTION # 26

As a GitHub user, where in the UI can you configure two-factor authentication (2FA) to further secure your account?

- A. Repository Settings -> Secrets and Variables -> 2FA
- B. Organization Settings -> Authentication Security -> 2FA
- C. Profile -> Account -> 2FA
- D. **Settings -> Password and Authentication -> 2FA**

Answer: D

Explanation:

As a GitHub user, you can configure two-factor authentication (2FA) to secure your account by navigating to Settings -> Password and Authentication -> 2FA. This section in the GitHub user interface allows you to set up and manage your 2FA methods, which provide an additional layer of security beyond just your password.

NEW QUESTION # 27

Which of the following statements most accurately describes who can access a private repository Wiki?

- A. Wikis will not be visible until shared with a specific user.
- B. Wikis are only viewable by repository admins.
- C. Wikis are public regardless of whether you have access to the repository.
- D. **Wikis can be viewed by the same people who have Read access to the repository.**

Answer: D

Explanation:

For private repositories on GitHub, the Wiki is accessible to anyone who has Read access to the repository. This means that if you can view the code and files in the repository, you can also view its Wiki. This makes Wikis a useful tool for documenting projects in a way that is available to all collaborators without requiring special permissions beyond those needed to access the repository itself.

NEW QUESTION # 28

What is the primary purpose of creating a security policy in a repository?

- A. To define which types of secrets are blocked with push protection
- B. To customize the repository's Dependabot configuration
- C. **To describe how security vulnerabilities should be responsibly disclosed**
- D. To ensure that peer code review occurs before new changes are merged

Answer: C

Explanation:

The primary purpose of creating a security policy in a GitHub repository is to guide users and contributors on how to report security vulnerabilities in a responsible and secure manner. This policy outlines the preferred method of communication, timelines, and any other pertinent information related to handling security issues.

Security Policy:

Option C is correct because a security policy provides guidelines for responsibly disclosing security vulnerabilities. This helps maintainers respond to and address security concerns promptly and securely, thereby protecting the project and its users.

Incorrect Options:

Option A is incorrect because ensuring peer code review is a best practice for code quality, but it is not the primary purpose of a security policy.

Option B is incorrect because push protection for secrets is managed through repository settings, not the security policy.

Option D is incorrect because customizing Dependabot configuration is related to dependency management, not directly to security policies.
