

Quiz Workday - Workday-Prism-Analytics - Useful Workday Pro Prism Analytics Exam Test Fee

2025 Latest Itcertmaster Workday-Prism-Analytics PDF Dumps and Workday-Prism-Analytics Exam Engine Free Share:
<https://drive.google.com/open?id=1lshh3pASI2nUto6PaVsgq8CWW7DhxEe>

With the increasing marketization, the Workday-Prism-Analytics study guide experience marketing has been praised by the consumer market. Attract users interested in product marketing to know just the first step, the most important is to be designed to allow the user to try before buying the Workday-Prism-Analytics study training materials, so we provide free pre-sale experience to help users to better understand our Workday-Prism-Analytics Exam Questions. The user only needs to submit his E-mail address and apply for free trial online, and our system will soon send free demonstration research materials of Workday-Prism-Analytics latest questions to download.

As the captioned description said, our Workday-Prism-Analytics practice materials are filled with the newest points of knowledge about the exam. With many years of experience in this line, we not only compile real test content into our Workday-Prism-Analytics learning quiz, but the newest in to them. And our professionals always keep a close eye on the new changes of the subject and keep updating the Workday-Prism-Analytics study questions to the most accurate.

>> **Workday-Prism-Analytics Test Fee** <<

Reliable Workday Workday-Prism-Analytics Test Blueprint & Vce Workday-Prism-Analytics Format

You can pass your Workday Workday-Prism-Analytics certification exam in less time, without wasting time and money on outdated or unreliable Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) exam study materials. Don't let fear or a lack of resources hold you back from achieving your goals, trust Itcertmaster Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) practice test material and achieve the highest marks in your Workday Pro Prism Analytics Exam (Workday-Prism-Analytics) exam.

Workday Pro Prism Analytics Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

You want to apply a Filter stage to your derived dataset to show only expense reports submitted in the current month and where the expense report total amount is higher than 2000 USD. What should you do?

- A. Use a simple filter, two conditions, and "If Any" operator.
- B. Use a simple filter, two conditions, and "If All" operator.
- C. Use a simple filter, three conditions, and "If All" operator.
- D. Use a simple filter, three conditions, and "If Any" operator.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a Filter stage in a derived dataset is used to include only rows that meet specific criteria. The requirement here is to show expense reports that satisfy two conditions: (1) submitted in the current month, and (2) total amount higher than 2000 USD. According to the official Workday Prism Analytics study path documents, this can be achieved by using a simple filter with two conditions and the "If All" operator (option A).

The first condition would check the submission date, using a function like MONTH() to compare with the current month (e.g., MONTH(submission_date) = MONTH(CURRENT_DATE())). The second condition would compare the total amount (e.g., total_amount > 2000). The "If All" operator ensures that both conditions must be true for a row to be included, which aligns with the requirement that both criteria (current month AND amount > 2000 USD) must be met. A simple filter is sufficient because the logic involves straightforward comparisons without nested conditions.

The other options are incorrect:

- * B. Use a simple filter, two conditions, and "If Any" operator: The "If Any" operator would include rows where either condition is true (e.g., submitted in the current month OR amount > 2000 USD), which does not meet the requirement for both conditions to be true.
- * C. Use a simple filter, three conditions, and "If All" operator: Only two conditions are needed (submission month and amount), so three conditions are unnecessary.
- * D. Use a simple filter, three conditions, and "If Any" operator: This combines the issues of option B (wrong operator) and option C (too many conditions).

Using a simple filter with two conditions and the "If All" operator ensures the dataset includes only the expense reports that meet both criteria.

NEW QUESTION # 22

The Prism use case is to classify workers based on their pay. You must create a field that evaluates worker pay and returns a value that represents various pay ranges. How would you add this field for inclusion on the Prism data source?

- A. Build a CASE calculated field function on the TBL directly to ease later transformation.
- B. Build an Evaluate Expression calculated field on your final Prism business object to evaluate workers against their pay.
- C. Add the additional field to your raw data before you ingest into Prism
- D. **Create a derived dataset and build a CASE calculated field to classify workers against their pay.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, classifying workers into pay ranges based on their pay requires creating a new field that evaluates the pay values and assigns them to defined ranges (e.g., "Low," "Medium," "High").

According to the official Workday Prism Analytics study path documents, the recommended approach is to create a derived dataset (DDS) and build a CASE calculated field to classify workers against their pay (option B). The CASE function in a calculated field allows users to define conditional logic (e.g., CASE WHEN pay

< 50000 THEN "Low" WHEN pay < 100000 THEN "Medium" ELSE "High" END), which is ideal for creating pay range classifications. This calculated field is added within a derived dataset, which can then be published as a Prism data source, making the new field available for reporting and analytics.

The other options are not optimal:

- * A. Add the additional field to your raw data before you ingest into Prism: Modifying raw data outside Prism is unnecessary and less flexible, as Prism's transformation capabilities (like CASE) are designed for such tasks.
- * C. Build a CASE calculated field function on the TBL directly to ease later transformation: Calculated fields cannot be created directly on a table (TBL) in Prism Analytics; they must be defined in a derived dataset.
- * D. Build an Evaluate Expression calculated field on your final Prism business object to evaluate workers against their pay: Prism Analytics does not use "Prism business objects" for calculated fields, and "Evaluate Expression" is not a standard function; this option is not applicable.

Using a CASE calculated field in a derived dataset provides a flexible and maintainable way to classify workers by pay ranges, ensuring the field is included in the final Prism data source.

NEW QUESTION # 23

The final derived dataset in a Prism pipeline is complete and ready to publish. What should be done prior to publishing?

- A. Create a table without the Enable for Analysis checkbox selected.
- B. Create a derived dataset with the PDS suffix.
- C. Add a Group By stage to the final derived dataset to add summary calculations.
- D. **Edit the Dataset API Name to reflect in the name of the Prism data source.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, before publishing a derived dataset as a Prism data source (PDS), it's important to ensure that the dataset is properly configured for downstream use. According to the official Workday Prism Analytics study path documents, one key step to take prior to publishing is to edit the Dataset API Name to reflect in the name of the Prism data source (option D). The Dataset API Name determines the name of the published Prism data source, which is used in reporting, discovery boards, and integrations. Setting a meaningful and descriptive API name (e.g., "Expense_Reports_by_Location") ensures that the data source is easily identifiable and aligns with naming conventions, improving usability and manageability in the Workday ecosystem. This step is a best practice to avoid confusion and ensure clarity for report writers and analysts.

The other options are not required or relevant:

- * A. Add a Group By stage to the final derived dataset to add summary calculations: Adding a Group By stage is not mandatory unless the use case specifically requires summarizations, which is not indicated here.
- * B. Create a table without the Enable for Analysis checkbox selected: Creating a new table is unnecessary, as the dataset is already complete, and the "Enable for Analysis" checkbox is relevant for real-time updates, not a requirement for publishing a derived dataset.
- * C. Create a derived dataset with the PDS suffix: Creating a new dataset is not needed, as the final derived dataset is already prepared, and adding a "PDS" suffix is not a required step for publishing.

Editing the Dataset API Name ensures the Prism data source has a clear and meaningful name, facilitating its use in reporting and analytics.

NEW QUESTION # 24

You created a derived dataset that imports data from a table, which will become your Stage 1. What can you add to this dataset?

- A. Up to five transformation stages.
- B. **As many transformation stages of any type as your scenario requires.**
- C. As many transformation stages of any type as long as they are in a particular order.
- D. Up to two Manage Fields transformation stages.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a derived dataset (DDS) allows users to transform data by adding various transformation stages after the initial import stage (Stage 1). According to the official Workday Prism Analytics study path documents, you can add as many transformation stages of any type as your scenario requires (option A). Prism Analytics supports a variety of transformation stages, such as Join, Union, Filter, Manage Fields, and Calculate Field, among others. There are no strict limits on the number of stages or their types, and they can be added in any order that makes sense for the data transformation logic, as long as the stages are configured correctly to produce the desired output. This flexibility allows users to build complex transformation pipelines tailored to their specific use case.

The other options are incorrect:

- * B. As many transformation stages of any type as long as they are in a particular order: While the order of stages matters for the transformation logic (e.g., a Filter before a Join), there is no predefined order requirement for all stages; the order depends on the scenario.
- * C. Up to five transformation stages: There is no limit of five transformation stages in Prism Analytics; you can add more as needed.
- * D. Up to two Manage Fields transformation stages: There is no restriction to only two Manage Fields stages; you can add as many

as required.

The ability to add as many transformation stages as needed provides maximum flexibility in shaping the data within a derived dataset.

NEW QUESTION # 25

You are a new Prism customer and you want to ensure the correct set of fields is brought into a derived dataset. When should you apply a Manage Fields stage?

- A. After the dataset is published.
- B. At the end of the Primary Pipeline of a published dataset.
- **C. At the beginning of the Primary Pipeline of the derived dataset.**
- D. At the beginning of the primary pipeline of the Base Dataset.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a Manage Fields stage is used to control the fields in a dataset by renaming, hiding, or changing field types, among other actions. According to the official Workday Prism Analytics study path documents, to ensure the correct set of fields is brought into a derived dataset (DDS), the Manage Fields stage should be applied at the beginning of the Primary Pipeline of the derived dataset (option C).

Placing the Manage Fields stage early in the pipeline-right after the initial import stage (Stage 1)-allows you to define the field structure upfront, ensuring that subsequent transformation stages (e.g., Join, Filter, Calculate Field) operate on the desired set of fields. This approach helps maintain consistency and avoids unnecessary processing of fields that are not needed in later stages.

The other options are not optimal:

- * A. After the dataset is published: You cannot add transformation stages like Manage Fields after a dataset is published; transformations must be applied during the dataset's creation or editing.
- * B. At the end of the Primary Pipeline of a published dataset: Similar to option A, you cannot modify a published dataset's pipeline, and placing Manage Fields at the end would not prevent unnecessary fields from being processed in earlier stages.
- * D. At the beginning of the primary pipeline of the Base Dataset: A Base Dataset does not have a transformation pipeline; it is a direct import of a table, so Manage Fields stages can only be applied in a Derived Dataset.

Applying the Manage Fields stage at the beginning of the derived dataset's Primary Pipeline ensures efficient data preparation and transformation.
