Reliable 2V0-17.25 Mock Test - 2V0-17.25 Reliable Dumps Ppt

Dumps4PDF offers affordable VMware Cloud Foundation 9.0 Administrator exam preparation material. You don't have to go beyond your budget to buy Updated 2V0-17.25 Dumps. To make your 2V0-17.25 exam preparation material smooth, a bundle pack is also available that includes all the 3 formats of dumps questions. Dumps4PDF offers 365 days updates.

Many people think that passing some difficult VMware certification exams needs to be proficient in much of 2V0-17.25 expertise and only these VMware personnels who grasp the comprehensive knowledge would be able to enroll in the exam. In fact, there are many ways to help you make up for your lack of knowledge, and pass the 2V0-17.25 Certification exams in the same. Perhaps you would spend less time and effort than the people who grasp fairly comprehensive expertise. The saying goes, all roads lead to Rome.

Dear everyone, you can download the 2V0-17.25 free demo for a little try. If you are satisfied with the 2V0-17.25 exam torrent, you can make the order and get the latest 2V0-17.25 study material right now. Our 2V0-17.25 training material comes with 100% money back guarantee to ensure the reliable and convenient shopping experience. The accurate, reliable and updated VMware 2V0-17.25 study torrent are compiled, checked and verified by our senior experts, which can ensure you 100% pass.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.
Topic 2	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.
Topic 3	• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 4	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q69-Q74):

NEW QUESTION # 69
The administrator of a VMware Cloud Foundation environment notices that log data from multiple components, including vSphere, NSX, and vSAN, is not being collected in Aria Operations for Logs.
What two steps should the administrator perform to resolve this issue? (Choose two.)

- A. Increase the storage capacity of the Aria Operations for Logs server to accommodate more log data.
- B. Reconfigure the log level settings on all vSphere components to ensure detailed logging.
- C. Check the network connectivity between the Aria Operations for Logs server and the VMware Cloud Foundation components.
- D. Ensure that the syslog configuration on each component is pointing to the correct Aria Operations for Logs server.
- E. Verify that the Aria Operations for Logs license is still valid and active.

Answer: C,D

Explanation:
If Aria Operations for Logs cannot reach the vSphere, NSX, or vSAN components over the network, no logs will be collected-so validating connectivity (firewalls, routing, DNS) is essential.
Each component's syslog settings must point to the correct Aria Operations for Logs endpoint; if they're misconfigured, logs won't be forwarded.

NEW QUESTION # 70
Following an internal security audit of the new VMware Cloud Foundation (VCF) instance, the following audit finding was documented for priority remediation:

All users from the custom administrators group could access the Direct Console User Interface (DCUI) on all ESXi hosts within the workload domain. RISK=High, IMPACT=High The company IT security policy around accessing ESXi servers states the following:

Users within the custom administrators group must access ESXi host configurations from within vCenter Server or the vSphere Web Client only.

Only users within the restricted administrators group must be allowed direct access to ESXi hosts.

Which two actions should the administrator perform on each of the hosts within the workload domain to remediate the security finding? (Choose two.)

- A. Add the restricted administrators group to the DCUI.Access advanced system setting.
- B. Enable Strict Lockdown Mode.
- C. Enable Normal Lockdown Mode.
- D. Disable SSH and the ESXi Shell.
- E. Add the custom administrators group to the DCUI.Access advanced system setting.

Answer: A,C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
From the VMware vSphere Security Guide and official documentation for Lockdown Mode:
C). Add the restricted administrators group to the DCUI. Access advanced system setting.
Exact Extract:
"You can add users or groups to the DCUI. Access advanced system setting to allow them to access the Direct Console User Interface (DCUI) even when the host is in lockdown mode. Ensure that only the authorized group (restricted administrators group) is included in this setting, and remove any other groups that should not have DCUI access." E). Enable Normal Lockdown Mode.
Exact Extract:
"When Normal Lockdown Mode is enabled, only users and groups in the DCUI. Access list can log in to the Direct Console User Interface (DCUI) of the host. All other local or direct access is denied unless explicitly permitted in the DCUI. Access list. This mode allows vCenter-controlled access for all other administrative operations, which matches the company's security policy requirements." Why Not the Other Options?
A: Disabling SSH and ESXi Shell is best practice but is not directly related to DCUI or lockdown mode.
B: Adding the custom administrators group would violate the stated security policy.
D: Strict Lockdown Mode prevents all DCUI access except for the root user, which is more restrictive than what the policy requires. The policy permits a specific group to have DCUI access, which is supported in Normal Lockdown Mode, not Strict.
Summary:
To meet the security policy and remediate the audit finding, the administrator must add only the restricted administrators group to the DCUI. Access setting (C) and enable Normal Lockdown Mode (E) on each ESXi host.
This configuration ensures that only members of the restricted administrators group can directly access the DCUI, and all other users (including those from the custom administrators group) must access the host through vCenter Server or the vSphere Web Client, fully aligning with the official VMware documentation and security best practices.

NEW QUESTION # 71
As part of the preparation for deploying VMware Aria Suite Lifecycle, an administrator needs to create Application Virtual Networks (AVNs).
Which three steps are necessary to complete the configuration of AVNs? (Choose three.)

- A. Setup routing policies for AVNs.
- B. Define the IP address ranges for the AVNs.
- C. Assign AVNs to specific ESXi hosts.
- D. Enable AVNs in the vCenter Server.
- E. Configure the AVNs in the NSX Manager.

Answer: B,C,E

Explanation:
Configure the AVNs in the NSX Manager: AVNs (Application Virtual Networks) are configured within NSX Manager to define the network segments and ensure proper network segmentation for workloads.
Assign AVNs to specific ESXi hosts: After configuring the AVNs in NSX Manager, they need to be assigned to the appropriate ESXi hosts to ensure they are properly mapped to the compute resources.
Define the IP address ranges for the AVNs: Each AVN must have an associated IP address range to provide network addressing

for the workloads deployed on them.

NEW QUESTION # 72

When planning a VMware by Broadcom solution, which of the following factors should be considered during capacity planning for CPU resources?

- **A. Number of physical cores in each host**
- **B. Business continuity and disaster recovery requirements**
- **C. VM workload profiles and peak utilization rates**
- D. Number of concurrent virtual network switches per host

Answer: A,B,C

Explanation:
Capacity planning considers the physical CPU resources, expected workload patterns, and resilience needs (like disaster recovery strategies). Network switches (option B) relate more to network design rather than CPU capacity planning.

NEW QUESTION # 73

Which vSphere feature allows virtual machines to access block storage arrays directly through dedicated protocols like iSCSI at the guest OS level?

- A. Virtual Volumes (vVols)
- B. VMFS-6
- C. vSAN File Services
- **D. In-guest iSCSI**

Answer: D

Explanation:
In-guest iSCSI uses an iSCSI initiator inside the VM, giving the guest direct access to the storage array.
vVols enable array-based management of VMs, VMFS-6 is VMware's file system, and vSAN File Services share files natively on vSAN.
