## Pass Guaranteed Quiz ACD201 - Useful New Braindumps Appian Senior Developer Book

Our ACD201 test questions are available in three versions, including PDF versions, PC versions, and APP online versions. Each version has its own advantages and features, ACD201 test material users can choose according to their own preferences. The most popular version is the PDF version of ACD201 exam prep. The PDF version of ACD201 Test Questions can be printed out to facilitate your learning anytime, anywhere, as well as your own priorities. The PC version of ACD201 exam prep is for Windows users. If you use the APP online version, just download the application. Program, you can enjoy our ACD201 test material service.

### Appian Senior Developer Sample Questions (Q66-Q71):

#### NEW QUESTION # 66

You need to create a read-only grid that displays support case information. Data for the support cases is mapped to the "Case" record type with data sync enabled.

Within the record, there are fields named "createdDateTime" and "resolvedDateTime". These two fields store the timestamps for when a case is created and resolved, respectively.

The grid includes a column indicating the number of hours between when the case was created and when it was resolved. This column must be sortable within the grid.

How should you calculate the hour value that will display in the column?

- A. Create a custom record field that evaluates at sync-time, and calculates the number of hours between when the case was created and the current date and time.
- **B. Create a custom record field that evaluates in real-time, and calculates the number of hours between when the case was created and when it was resolved.**
- C. Within the grid column, utilize an Appian function to calculate the number of hours between when the case was created and when it was resolved.

**Answer: B**

Explanation:

A custom record field that evaluates in real-time and calculates the hours between "createdDateTime" and "resolvedDateTime" ensures the calculated value is available as a sortable field within the read-only grid.

#### NEW QUESTION # 67

Users are experiencing slow load times when retrieving customer records with many transactions.

After using performance monitoring tools, you discover that the following interface definition is responsible for the majority of page load time:

□ Additionally, both queries (rule!APP\_GetTransactionsWithFilters and rule!

APP\_GetTransactionTypeWithFilters) take approximately 25 milliseconds each to execute when you test them using the expression

editor.

Which action would result in the greatest reduction in the load time for this interface component?

- A. Avoid fetching the total count when getting transactions.
- **B. Prefetch transaction types and use the `displayvalue()` function to display the Transaction Type for each transaction.**
- C. Use a synced record for Transactions to improve the query response time for the query performed on line 6.

**Answer: B**

Explanation:

Prefetching all transaction types once (instead of running a separate query for each row in the grid) and then using the `displayvalue()` function to display the corresponding transaction type name for each transaction will significantly reduce the number of queries executed. This eliminates the N+1 query problem and will greatly improve the interface load time.

#### NEW QUESTION # 68

You're creating a new entity-backed record type without data sync enabled. Users in the "ACME Supervisors" group must be able to access the Delete Case related action on the record summary view.

What are two valid steps that you should perform to grant users the appropriate access?

- A. Add the "ACME Supervisors" group as a Viewer to the data store mapped to the record.
- **B. Add the "ACME Supervisors" group as a member of the "Database Editors" group and grant DELETE privileges.**
- C. Grant Viewer permissions to the underlying interface object for the Summary view.
- **D. Update the record action security for "Delete Case" and include the "ACME Supervisors" group within the visibility settings.**

**Answer: B,D**

Explanation:

Adding "ACME Supervisors" as members of "Database Editors" with DELETE privileges allows them to perform delete operations. Updating the "Delete Case" record action security and including "ACME Supervisors" in the visibility settings ensures they have access to the related action on the record summary view.

#### NEW QUESTION # 69

In reviewing the process model metrics of your application, you notice a process model with a completion rate of only 10%.

What are two possible reasons for this low completion rate? (Choose two.)

- A. The days configured for archival or deletion is significantly higher than the other process models in your application.
- **B. The process contains at least one User Input Task with no exceptions or escalations, and users do not complete the task.**
- C. There are a high number of smart service nodes configured in the process model.
- **D. There are a significant number of instances that are experiencing process errors, which are not being handled by the production support team.**

**Answer: B,D**

Explanation:

Process errors that remain unhandled will stall instances; those instances never reach an end event, driving the completion rate down. User-input tasks without deadlines, exceptions, or escalations can sit indefinitely when users do not act, leaving instances in an active state and lowering the overall completion percentage.

#### NEW QUESTION # 70

You need to connect to an external system using OAuth 2.0: SAML Bearer Assertion Flow authentication type, which requests access to an API on behalf of a signed-in user.

This standard has several steps involved with the SAML Bearer Assertion Flow.

Which two steps should you perform to connect to the external system? (Choose two.)

- A. Use an `!authorizationLink()` on the relevant interface.
- **B. Register the connection in the third-party system**
- **C. Configure SAML for single sign-on (SSO).**

- D. Generate a service account key in third-party systems.

**Answer: B,C**

Explanation:

Configure SAML for single sign-on (SSO).

The bearer-assertion flow relies on an existing SAML SSO configuration so Appian can issue a signed SAML assertion on behalf of the signed-in user.

Register the connection in the third-party system.

You must register (or "trust") Appian's client/certificate with the external system so it will accept the SAML assertion and issue an OAuth 2.0 access-token for the user.

## NEW QUESTION # 71
