Pass4Tes선택으로 여러분은 시간도 절약하고 돈도 절약하는 일석이조의 득을 얻을수 있습니다. 또한 구매후 일년무료 업데이트버전을 바꿀수 있는 기회를 얻을수 있습니다.

최신 Salesforce Order Management Order-Management-Administrator 무료 샘플문제 (Q34-Q39):

질문 # 34

How can a user view the information exchanged between the payment platform and the external payment gateways?

- A. Navigate to Payments within the setup menu and select the payment platform
- **B. Navigate to Payment Gateway Logs related list on the corresponding Order Payment Summary**
- C. Check associated debug logs in Debug Logs in setup
- D. Check for process exceptions associated with the Order Payment Summary

정답: B

설명:

Explanation

The best way for a user to view the information exchanged between the payment platform and the external payment gateways is to navigate to Payment Gateway Logs related list on the corresponding Order Payment Summary. A Payment Gateway Log is a record that captures the request and response messages between the payment platform and the external payment gateways, such as Stripe, PayPal, etc. A Payment Gateway Log has a lookup relationship to the Order Payment Summary object, which represents a payment made for an order or part of an order. A user can use the Payment Gateway Logs related list on the Order Payment Summary page to view the details of the payment transactions, such as the request and response payloads, status codes, timestamps, etc. Verified References:

질문 # 35

A company has an external system that stores client accounting data but they want to be able to search for this data within Salesforce. What three steps should the administrator take to implement this functionality?

- A. Create an automated data capture (or the external system)
- **B. Create an External Object for each table of accounting data in the external system**
- **C. Create an Indirect Lookup field to connect to the Account**
- **D. Create an External Data Source pointing to the external system's database**
- E. Create an automated import of the external data using the Job Scheduler

정답: B,C,D

설명:

Explanation

Three steps that the administrator should take to implement this functionality are:

Create an External Data Source pointing to the external system's database. An External Data Source is a type of metadata that defines the connection and authentication information for an external system that stores data outside of Salesforce. The administrator can create an External Data Source using the Lightning Connect OData 2.0 or 4.0 adapters, which support read-only access to data in relational databases.

Create an External Object for each table of accounting data in the external system. An External Object is a type of custom object that maps to a table in an external system. The administrator can create an External Object for each table of accounting data that they want to access from Salesforce, and define its fields and relationships accordingly.

Create an Indirect Lookup field to connect to the Account. An Indirect Lookup field is a type of custom field that links a child External Object record to a parent standard or custom object record. The administrator can create an Indirect Lookup field on the External Object that references the Account object, and specify the external column name and value that match the Account ID.

질문 # 36

Which practice should an admin consider when working with the Ensure Funds Async action?

- A. The invoice object should be cloned to a custom object before calling the action
- B. The invoice object should be logged and cloned to a custom object before calling the action
- C. The Invoice ID should be logged before passing it to the Ensure Funds Async action
- D. The invoice ID should be assigned somewhere in the flow before calling the action

정답: D

설명:

The Ensure Funds Async action requires the invoice ID as an input parameter. The action checks if there are enough funds available for the invoice and updates the invoice status accordingly. The invoice ID should be assigned somewhere in the flow before calling the action, otherwise the action will fail.

질문 # 37

An administrator is configuring delivery methods. What two types of records need to be created?

- A. Delivery Method
- B. Order Delivery Method
- C. Product Summary
- D. Product
- E. Order Delivery Summary

정답: A,B

설명:

The Order Delivery Method and Delivery Method objects are used to configure delivery methods for orders. A delivery method is a way of delivering an order to a customer, such as standard shipping, express shipping, or in-store pickup. A Delivery Method record defines the name, description, type, and cost of a delivery method. An Order Delivery Method record associates an order with a delivery method and stores additional information such as the delivery address, tracking number, and status. Reference: Order Management Objects, [Delivery Methods]

질문 # 38

A company has multiple fulfillment centers that they want to utilize when orders are fulfilled. The administrator is tasked with minimizing the distance from fulfillment center to delivery location. How can this be accomplished?

- A. Modify the Fulfillment Location Search process to search by closest distance instead of least number of splits
- B. Ask a developer to create an Apex Action that can determine the closest fulfillment location
- C. Create a Workflow Rule on the Fulfillment Order object that utilizes the Order Management workflow field update actions
- D. Add the "Order Routing Rank By Closest Distance" action to the fulfillment flow

정답: D

설명:

The best way for the administrator to accomplish this task is to add the "Order Routing Rank By Closest Distance" action to the fulfillment flow. This action is a flow core action that ranks the fulfillment locations by their distance from the delivery location, and returns a list of ranked locations. The administrator can use this action to find the optimal fulfillment location for each order based on proximity. Verified References:
