Reliable Test C-IBP-2502 Test, C-IBP-2502 Key Concepts

We provide top quality verified SAP certifications preparation material for all the C-IBP-2502 exams. Our C-IBP-2502 certified experts have curated questions and answers that will be asked in the real exam, and we provide money back guarantee on TestInsides SAP preparation material. Moreover, we also offer C-IBP-2502 practice software that will help you assess your skills before real C-IBP-2502 exams. Here is exclusive SAP bundle deal, you can get all C-IBP-2502 exam brain dumps now at discounted price.

SAP C-IBP-2502 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.
Topic 2	<ul style="list-style-type: none"> • Model Sales & Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.
Topic 3	<ul style="list-style-type: none"> • Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.
Topic 4	<ul style="list-style-type: none"> • General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.
Topic 5	<ul style="list-style-type: none"> • Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q47-Q52):

NEW QUESTION # 47

What are the possible Master Data Maintenance options for SAP Integrated Business Planning for Supply Chain? Note: There are 3 correct answers to this question.

- A. The Planning Areas Model Configuration app
- **B. The Manage Master Data app**
- C. The Planner Workspaces app
- **D. The Data Integration Jobs app**
- **E. The SAP IBP, add-in for Microsoft Excel**

Answer: B,D,E

Explanation:

Master data maintenance in SAP IBP involves creating and updating planning objects (e.g., Products, Locations), supported by specific tools, per SAP IBP's documentation.

* Option A: The SAP IBP, add-in for Microsoft Excel This is correct. The Excel add-in's "Manage Planning Objects" feature allows master data maintenance, per SAP IBP's UI capabilities.

* Option B: The Manage Master Data app This is correct. This Fiori app is designed for direct master data management (e.g., editing Locations), per SAP IBP's documentation.

* Option C: The Planner Workspaces app This is incorrect. Planner Workspaces is for planning and visualization, not master data maintenance.

* Option D: The Planning Areas Model Configuration app This is incorrect. This app configures planning areas, not master data directly.

* Option E: The Data Integration Jobs app This is correct. This app (formerly Data Integration) imports master data via files or integration, per SAP IBP's data management guides.

Thus, A, B, and E are maintenance options, per SAP IBP's official tools.

NEW QUESTION # 48

What are some of the available ABC segmentation methods in SAP IBP? Note: There are 2 correct answers to this question.

- **A. By Pareto Principle (Sorted and Cumulated %)**

- B. By Number of Items (Sorted Average)
- C. By Pareto Principle (Sorted and Calculated Values)
- D. By Number of Items (Sorted Value)

Answer: A,D

Explanation:

ABC segmentation in SAP IBP classifies items (e.g., products) based on value or volume, using methods in the ABC/XYZ Segmentation app, per SAP IBP's demand planning documentation.

* Option A: By Number of Items (Sorted Average) This is incorrect. "Sorted Average" is not a standard ABC method; it's not defined in SAP IBP's segmentation options.

* Option B: By Pareto Principle (Sorted and Cumulated %) This is correct. The Pareto Principle (80/20 rule) sorts items by value (e.g., revenue) and cumulates percentages (e.g., top 20% = A), a standard method, per SAP IBP's documentation.

* Option C: By Number of Items (Sorted Value) This is correct. Sorting by value (e.g., total sales) and assigning classes (A, B, C) based on item count thresholds is a supported ABC method, per SAP IBP's segmentation features.

* Option D: By Pareto Principle (Sorted and Calculated Values) This is incorrect. "Calculated Values" is vague and not a distinct method; B covers the Pareto approach accurately.

Thus, B and C are available ABC methods, per SAP IBP's official segmentation capabilities.

NEW QUESTION # 49

You need to create time periods for the time profile in a planning area. What should you be aware of when running the Create Time Periods application job?

- A. The planning area to which the time profile is assigned must be active
- B. It is mandatory to specify the planning area in the Parameter Section of the application job
- C. A time profile has to be activated so that the application job can proceed
- D. This application job can also be triggered from SAP IBP, add-in for Microsoft Excel

Answer: C

Explanation:

The Create Time Periods job in SAP IBP (via the Application Jobs app) generates time periods (e.g., weeks, months) for a time profile, a prerequisite for planning.

* Option A: The planning area to which the time profile is assigned must be active This is incorrect.

The planning area doesn't need to be active during time period creation; the job operates on the time profile independently.

* Option B: This application job can also be triggered from SAP IBP, add-in for Microsoft Excel This is incorrect. The job is triggered via the Application Jobs app (Fiori), not the Excel add-in, which focuses on planning views.

* Option C: A time profile has to be activated so that the application job can proceed This is correct.

The time profile must be activated (i.e., saved and valid) before the job can generate periods, ensuring configuration readiness, per SAP IBP's time profile documentation.

* Option D: It is mandatory to specify the planning area in the Parameter Section of the application job This is incorrect. The job requires the time profile ID, not the planning area, as parameters, though the time profile is linked to a planning area.

Thus, C is the key awareness point, per SAP IBP's official job requirements.

NEW QUESTION # 50

What are some of the actions configurators can do when working with versions? Note: There are 2 correct answers to this question.

- A. Copy master data from base version to other version
- B. Run an application job to purge obsolete versions
- C. Delete key figure data for a date range for all versions at once
- D. Copy key figure data from any version to any version

Answer: A,D

Explanation:

Versions in SAP IBP (e.g., baseline, scenario) allow what-if planning, with configurators managing data across them, per SAP IBP's version management documentation.

* Option A: Delete key figure data for a date range for all versions at once This is incorrect. Purge jobs delete data per version, not

across all versions simultaneously in one action.

* Option B: Copy key figure data from any version to any version This is correct. The Copy Operator can transfer key figure data between any versions (e.g., baseline to scenario), a standard feature, per SAP IBP's documentation.

* Option C: Copy master data from base version to other version This is correct. Master data can be copied from the base version to other versions via the Manage Versions app or data integration, per SAP IBP's version setup.

* Option D: Run an application job to purge obsolete versions This is incorrect. Versions are managed manually or via expiration, but there's no specific job to "purge obsolete versions"; data purging is separate.

Thus, B and C are valid actions, per SAP IBP's official version capabilities.

NEW QUESTION # 51

What option is available for the key figure that is enabled for fixing?

- A. You can change a fixed key figure only with administrative rights
- B. Fixing is possible for a part of a key figure value on a certain planning level
- C. Fixing is possible for key figures with negative values
- **D. Fixing is possible for a certain period, including all child values in the hierarchy**

Answer: D

Explanation:

Key figure fixing in SAP IBP allows planners to lock values (e.g., in Excel) to prevent changes during planning runs, a feature in time-series planning.

* Option A: Fixing is possible for key figures with negative values This is incorrect. Fixing applies to any value (positive, negative, zero), but this isn't a specific option or limitation in SAP IBP's fixing functionality.

* Option B: Fixing is possible for a part of a key figure value on a certain planning level This is incorrect. Fixing locks the entire value at a planning level, not a portion of it. Partial adjustments require separate key figures or manual edits before fixing.

* Option C: You can change a fixed key figure only with administrative rights This is incorrect. Fixed key figures can be unfixed or edited by users with appropriate planning permissions, not just administrators, via the Excel UI.

* Option D: Fixing is possible for a certain period, including all child values in the hierarchy This is correct. In SAP IBP, fixing a key figure (e.g., Demand Plan Qty) for a period locks that value and propagates the fix to all child levels in the hierarchy (e.g., disaggregated Product-Customer combinations), ensuring consistency, as per SAP IBP's fixing documentation.

Thus, D is the correct option for key figure fixing, reflecting SAP IBP's hierarchical locking mechanism.

NEW QUESTION # 52

.....

Our research materials will provide three different versions, the PDF version, the software version and the online version. Software version of the features are very practical, in order to meet the needs of some potential customers, we provide users with free experience, if you also choose the characteristics of practical, I think you can try to use our C-IBP-2502 test prep software version. I believe you have a different sensory experience for this version of the product. Because the software version of the product can simulate the real test environment, users can realize the effect of the atmosphere of the C-IBP-2502 Exam at home through the software version. Although this version can only run on the Windows operating system, our software version of the learning material is not limited to the number of computers installed and the number of users, the user can implement the software version on several computers. You will like the software version. Of course, you can also choose other learning mode of the C-IBP-2502 valid practice questions.
