Citrix Virtual Apps and Desktops Administration Sample Questions (Q54-Q59):

NEW QUESTION # 54

Scenario: A Citrix Administrator configures the 'Auto connect client drives' user settings to map client drives within the HDX session for all published desktops. The setting is configured in a Baseline Group Policy Object (GPO) and linked to an Organizational Unit (OU) that contains all of the published desktops. When a user launches the desktop, client drives are NOT mapped. What is a possible reason?

- A. gpupdate /force needs to be executed on all of the machines.
- B. The GPO needs to be linked to the User OU.
- C. Loopback processing is NOT enabled.
- D. Desktops need to be restarted for the policy to be applied.

Answer: C

Explanation:

User settings in a GPO linked to a machine OU only apply if loopback processing is enabled.

Since the "Auto connect client drives" setting is a user policy but applied at the desktop OU level, loopback processing must be enabled for the policy to take effect within the HDX sessions.

NEW QUESTION # 55

What is the minimum permission a Citrix Administrator can grant to an IT manager to access Citrix Studio?

- A. Machine Catalog Administrator
- B. Delivery Group Administrator
- C. Read Only Administrator
- D. Host Administrator

Answer: C

NEW QUESTION # 56

Scenario: A Citrix Administrator is working on a published application. The network is connected for 100 seconds but is interrupted and applications become unusable. The session then automatically resumes, and the administrator is able to continue working on the application at the same progress point as before the interruption.

Which policy is enabled in this scenario?

- A. Load Management
- B. Session Reliability
- C. ICA Keep Alive
- D. Auto client reconnect

Answer: B

NEW QUESTION # 57

Scenario: A Citrix Administrator maintains a Citrix Virtual Apps and Desktops Site with a number of network print servers being used for all users. Currently, the print servers use native Windows drivers. No client printers are being used. New company guidelines require a reduction in the number of native drivers being used within the Site infrastructure. Which step can the administrator take to meet the new company guidelines?

- A. Install the Universal Print Server on all print servers in the Site and update the Universal printer driver usage policy setting.
- B. Install the Universal Print Server on all print servers in the Site and leave the default Universal printer driver usage policy setting.
- C. Configure the Citrix Universal Generic Printer and update the Auto-create generic universal printer policy setting.
- D. Enable the Citrix Universal Print Driver (EMF) driver and leave the default Universal printer driver usage policy setting.

Answer: A

Explanation:

By installing the Citrix Universal Print Server and configuring the Universal printer driver usage policy, print servers can use the Citrix Universal Print Driver instead of multiple native Windows drivers. This reduces the number of drivers in the environment while ensuring centralized network printing remains functional.

NEW QUESTION # 58

Which type of certificate should a Citrix Administrator request so that a client endpoint can communicate with StoreFront over an encrypted connection?

- A. Client
- **B. Server**
- C. Intermediate
- D. Root

Answer: B

Explanation:

A server certificate must be installed on the StoreFront server to enable secure HTTPS communication. The client endpoint relies on this certificate to establish an encrypted TLS connection with StoreFront.
