## SAP Certified Associate - Validating Business Transformation Sample Questions (Q12-Q17):

### NEW QUESTION # 12

What is the RISE with SAP Methodology Dashboard used for?

- A. Displaying SAP S/4HANA roadmaps
- B. Showing clean core status and extensibility KPIs
- C. Managing project methodologies
- D. Displaying ERP licensing data

**Answer: B**

Explanation:

The RISE with SAP Methodology Dashboard, also known as the Clean Core Dashboard, provides a centralized view of how closely a customer's SAP S/4HANA system adheres to clean core principles. It monitors system characteristics such as configuration quality, extensibility usage, custom code volume, upgrade readiness, and adherence to recommended SAP development patterns. This dashboard enables project and IT teams to identify potential risks, unnecessary modifications, and areas where the system may diverge from SAP's cloud-readiness standards.

By monitoring extensibility usage—such as in-app extensions, side-by-side development, and classic enhancements—the dashboard helps ensure the transformation project remains aligned with SAP's modern cloud principles. This is critical in safeguarding system longevity, reducing technical debt, and preparing systems for continuous innovation.

The dashboard does not display licensing data (A) or roadmaps (B). While it supports methodology enforcement, it does not "manage" methodologies directly (D). Instead, it provides visibility and governance around clean core adherence, helping ensure transformation activities remain within SAP-recommended boundaries.

### NEW QUESTION # 13

Which approach combines the Greenfield and Brownfield strategies?

- A. Side-by-Side Migration
- B. Cloud-Native Apps
- C. Hybrid Cloud
- D. Selective Data Transition

**Answer: D**

Explanation:

Selective Data Transition (SDT) is a specialized approach that blends elements of both Greenfield (new implementation) and Brownfield (system conversion) strategies. This hybrid methodology allows organizations to selectively migrate configuration settings, historical data, and business processes from their existing systems into a new SAP S/4HANA environment. Unlike a pure Greenfield approach, which requires starting completely fresh, SDT preserves valuable components of the legacy system. At the same time, it avoids the full conversion requirements of a Brownfield approach, offering greater flexibility for reengineering processes and adopting SAP best practices.

SDT is especially useful for companies with multiple ERP systems or those undergoing large-scale consolidation. It enables harmonization of processes, data cleansing activities, and the adoption of standardized templates while still leveraging existing investment where beneficial.

The other options do not combine the two approaches. Cloud-native apps refer to development style; side-by-side migration describes extension patterns; hybrid cloud refers to infrastructure strategy. Selective Data Transition is the only transformation methodology that formally merges the strengths of both Greenfield and Brownfield.
