

# Salesforce-MuleSoft-Developer-I Original Questions, Salesforce-MuleSoft-Developer-I Real Exam Answers

BONUS!!! Download part of CramPDF Salesforce-MuleSoft-Developer-I dumps for free: <https://drive.google.com/open?id=1IfzdKthFgJ6haEnYhSsrFZzbtZu4CXm>

Now you can pass Salesforce Salesforce-MuleSoft-Developer-I exam without going through any hassle. You can only focus on Salesforce-MuleSoft-Developer-I exam dumps provided by the CramPDF, and you will be able to pass the Salesforce-MuleSoft-Developer-I test in the first attempt. We provide high quality and easy to understand Salesforce-MuleSoft-Developer-I dumps with verified Salesforce Salesforce-MuleSoft-Developer-I for all the professionals who are looking to pass the Salesforce Salesforce-MuleSoft-Developer-I exam in the first attempt. The Salesforce-MuleSoft-Developer-I training material package includes latest Salesforce-MuleSoft-Developer-I questions and practice test software that will help you to pass the Salesforce-MuleSoft-Developer-I exam.

## Salesforce Salesforce-MuleSoft-Developer-I Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Structuring Mule Applications: Structuring Mule applications covers parameterizing an application and defining and reusing global configurations. It includes breaking an application into multiple flows using private flows, subflows, and the Flow Reference component.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Using Connectors: It focuses on retrieving data from REST services using HTTP Request or REST Connector. Moreover, the topic covers using a Web Service Consumer connector for SOAP web services and the Transform Message component.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Debugging and Troubleshooting Mule Applications: Using breakpoints to inspect a Mule event during runtime, installing missing Maven dependencies, and reading and deciphering Mule log error messages are sub-topics of this topic.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Designing APIs: Designing APIs involves describing the lifecycle of the modern API and using RAML to define various aspects of an API. It includes identifying when to use query parameters vs URI parameters, and defining API parameters.</li> </ul>

Topic 5	<ul style="list-style-type: none"> <li>Processing Records: Processing records includes methods for processing individual records in a collection and explaining how Mule events are processed by the For Each scope. It also involves using the Batch Job with Batch Steps and a Batch Aggregator.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Routing Events: It focuses on using the Choice router for conditional logic and the Scatter-Gather router to multicast events. This topic also involves validating data by using the Validation module.</li> </ul>

## Salesforce Salesforce-MuleSoft-Developer-I Questions: Turn Your Exam Fear into Confidence [2026]

Unlike other Salesforce-MuleSoft-Developer-I study materials, there is only one version and it is not easy to carry. Our Salesforce-MuleSoft-Developer-I exam questions mainly have three versions which are PDF, Software and APP online, and for their different advantages, you can learn anywhere at any time. And the prices of our Salesforce-MuleSoft-Developer-I training engine are reasonable for even students to afford and according to the version that you want to buy.

### Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q221-Q226):

#### NEW QUESTION # 221

Refer to the exhibits.

```

<flow name="main">
  <http:listener doc:name="HTTP: GET /" config-ref="HTTP_Listener_config" path="/" />
  <set-payload value="Success - Begin" doc:name="Success - Begin" />
  <http:request method="GET" doc:name="HTTP: GET /data" url="http://mule.learn.mulesoft.com/data"/>
  <set-payload value="Success - End mainFlow" doc:name="Success - End" />
  <error-handler >
    <on-error-continue enableNotifications="true" logException="true" doc:name="On Error Continue">
      <set-payload value="Error" doc:name="Error" />
    </on-error-continue>
  </error-handler>
</flow>

```

A web client submits a request to the HTTP Listener and the HTTP Request throws an error.

What payload and status code are returned to the web client?

Refer to the exhibits. A web client submits a request to the HTTP Listener and the HTTP Request throws an error.

What payload and status code are returned to the web client?

- A. Response body: "Success - Begin" Default response status code: 200

- B. Error response body: error, description Default error response status code: 500
- C. Response body: "Error" Default response status code: 200
- D. Responsebody: "Success - End" Default response status code: 200

**Answer: C**

Explanation:

Response body: "Error" Default response status code: 200.

1) Payload is successfully set to "Success - Started Flow"

2) When HTTP Request throws an error, execution halts

#[error.description] = "ABC"

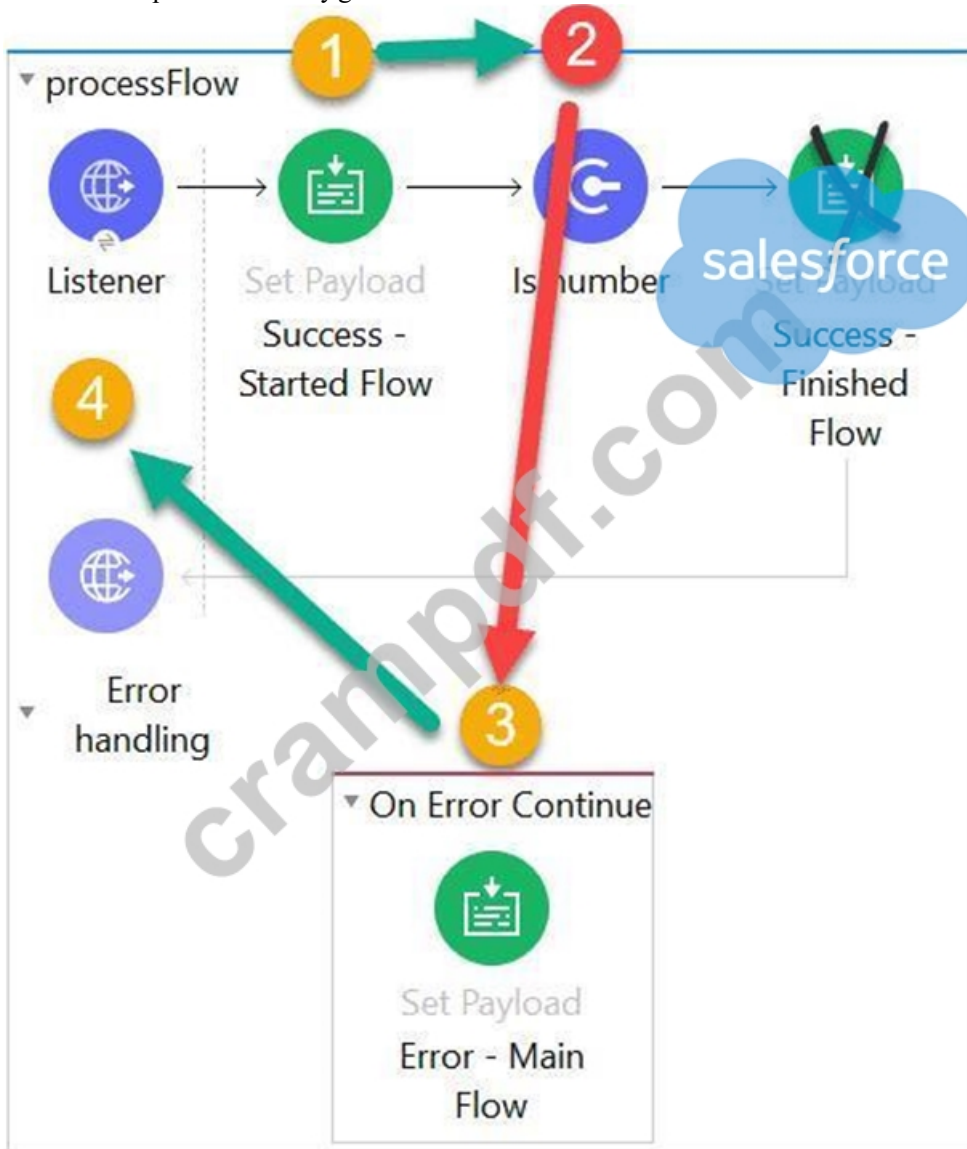

#[error.errorType] = "XYZ"

3) The On Error Continue scope handles the error. When On Error Continue scope is invoked, all the processors in error block are executed and success response is sent back to the client with payload which is set in error flow. In this case payload is set to "Error" value in error block.

4) "Error" is returned to the requestor in the body of the HTTP request with HTTP Status Code: 200 as On error continue always sends success error code.

Timeline Description automatically generated with medium confidence

**NEW QUESTION # 222**

What module and operation will throw an error if a Mule events payload is not number ?

- A. Validation modules Is Number operation
- B. Filter modules Is Number operation
- C. Validation modules Is not Number operation
- D. None of these

**Answer: A**

Explanation:

Correct answer is Validation modules Is Number operation.

Mule 4 does not use filters anymore. The functionality provided by filters in Mule 3 can be achieved by using the Validation Module.

### NEW QUESTION # 223

Refer to the exhibits.

A web client sends sale data in a POST request to the Mule application. The Transform Message component then enrich the payload by prepending a vendor name to the sale data.

What is written to the sales.csv file when the flow executes?

```

<?xml version="1.0" encoding="UTF-8"?>
<sale>
  <transaction_id>SS-4848-44KK-45YQ</transaction_id>
  <customer_id>anniepoint@acme.com</customer_id>
  <customer>Annie Point</customer>
  <item>Car Seat</item>
  <qty>1</qty>
  <price>59</price>
</sale>

```

```

<ee:transform doc:name="Add vendor name">
  <ee:message>
    <ee:set-payload><![CDATA[%dw 2.0
      output application/json
      ---
      {vendor: "Acme"} ++ payload.sale]]>
    </ee:set-payload>
  </ee:message>
</ee:transform>
<file:write doc:name="File: sales.csv" path="file-store/sales.csv">
</file:write>
</flow>

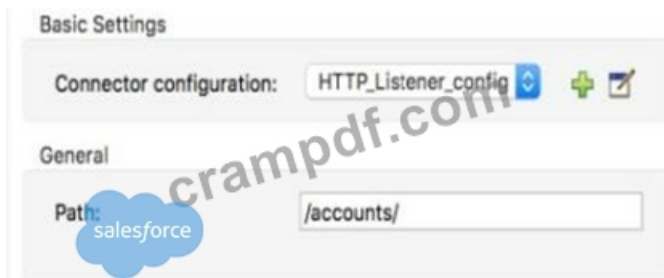

```

- A. The enriched payload in CSV format
- B. The enriched payload in JSON format
- C. The enriched payload in XML format
- D. An error message

**Answer: B**

### NEW QUESTION # 224

Refer to the exhibit.

What is the correct syntax to add a customer ID as a URI parameter in an HTTP Listener's path attribute?

- A. (customerID)
- B. \${customerID}
- C. #[customerID]
- D. {customerID}

**Answer: D**

### NEW QUESTION # 225

How does APIKit determine the number of flows to generate from a RAML specification?

- A. Creates a separate flow for each resource
- B. Creates a separate flow for each resource that contains child resources
- C. Creates a separate flow for each response status code
- D. Creates a separate flow for each HTTP method

**Answer: D**

Explanation:

APIKit Creates a separate flow for each HTTP method
