질문 # 16

For a PowerStore 3200T running Block Workloads, which two options does Sizer take into consideration to equate the performance for each workload? (Select 2)

- A. Throughput
- B. Response Time
- C. Storage Performance Saturation
- D. Frontend Performance Saturation

정답: A,B

설명:

For a PowerStore 3200T running block workloads, the Sizer tool takes into consideration several factors to equate the performance for each workload. The two main options are:

* Throughput: This refers to the amount of data that can be processed by the system in a given period. It is a critical measure of the storage system's capability to handle large volumes of data efficiently.

* Response Time: This metric measures the time taken to complete an I/O operation from the moment it is initiated. It is essential for assessing the performance of latency-sensitive applications.

These parameters help ensure that the storage solution is designed to meet the performance requirements of the workload, balancing between high throughput and low response times.

질문 # 17

A customer must provision file systems on a Dell Unity XT 480F for a test environment. A dynamic pool will be configured with RAID 5 (4+1) protection to match the production pool. The used tier contains only SAS Flash 3 drives. What is the minimum drive count necessary to create this pool?

- A. 0
- B. 1
- C. 2
- D. 3

정답: A

설명:

* Dynamic Pool Configuration with RAID 5:

* RAID 5 (4+1) protection involves 4 data drives and 1 parity drive.

* Minimum Drive Count:

* For creating a dynamic pool with RAID 5 (4+1), the configuration must include at least 2 RAID 5 (4+1) groups to ensure redundancy and performance.

* The minimum drive count for this setup would be $2 * (4 + 1) + 1$ (hot spare) = 11 drives.

* RAID 5 Requirements:

* This configuration ensures that the dynamic pool has enough drives to maintain performance and data protection according to Dell's best practices.

* Dell Midrange Storage References:

* Dell Unity XT documentation provides detailed guidelines on RAID configurations and the minimum drive requirements for dynamic pools.

* Community forums and support resources from Dell Technologies offer insights into best practices for configuring RAID and dynamic pools.
