ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q197-Q202):

NEW QUESTION # 197

The source control operation used to store local changes on an instance for later application is called a(n) <blank>.

- A. Stash
- B. Tag

- C. Branch
- D. Update set

Answer: A

Explanation:

The source control operation used to store local changes on an instance for later application is called a stash. A stash is a temporary storage area for uncommitted changes that are not ready to be pushed to a remote repository. Developers can use stashes to save their work in progress without committing it to the local repository or discarding it. Stashes can be applied later to restore the changes to the working directory, or dropped if they are no longer needed. References: [ServiceNow Docs - Stash local changes], [ServiceNow Docs - Source control]

NEW QUESTION # 198

It is best practice to define the business requirements and the process(es) an application will manage as part of the application development plan. What are some of the considerations to document as part of the business process?

- A. Business problem, data input/output, users/stakeholders, and process steps
- B. Business problem, users/stakeholders, available licenses, and database capacity
- C. Business problem, data input/output, project schedule, and process steps
- D. Business problem, data input/output, users/stakeholders, and database capacity

Answer: A

Explanation:

It is best practice to define the business requirements and the process(es) an application will manage as part of the application development plan. The following are some of the considerations to document as part of the business process:

* Business problem. This is the description of the problem or opportunity that the application is intended to address or exploit. It should include the background, context, scope, and objectives of the problem or opportunity.

* Data input/output. This is the specification of the data that the application will need to collect, store, manipulate, and display. It should include the data sources, formats, validations, transformations, and integrations of the data.

* Users/stakeholders. This is the identification of the users and stakeholders who will be involved in or affected by the application. It should include the roles, responsibilities, expectations, and needs of the users and stakeholders.

* Process steps. This is the definition of the steps and activities that the application will perform or support. It should include the inputs, outputs, triggers, conditions, and outcomes of each step or activity.

The following are not some of the considerations to document as part of the business process:

* Project schedule. This is the estimation of the time and resources required to complete the application development project. It should include the milestones, deliverables, dependencies, and risks of the project. This is not part of the business process, but part of the project management plan.

* Database capacity. This is the measurement of the amount of data that the application will generate and store in the database. It should include the data volume, growth rate, retention policy, and backup strategy of the data. This is not part of the business process, but part of the technical design and architecture of the application.

* Available licenses. This is the number and type of licenses that the application will consume or require from the ServiceNow platform. It should include the license model, cost, and allocation of the licenses.

This is not part of the business process, but part of the financial and legal aspects of the application.

NEW QUESTION # 199

Why create Applications in ServiceNow?

A) To replace outdated inadequate custom business applications and processes B) To extend service delivery and management to all enterprise departments C) To allow users full access to all ServiceNow tables, records and fields D) To extend the value of ServiceNow

- A. a b c and d
- B. b c and d
- C. a b and c
- D. a b and d

Answer: D

Explanation:

Creating applications in ServiceNow can help businesses replace outdated, inadequate, custom business applications and processes, extend service delivery and management to all enterprise departments, and extend the value of ServiceNow by leveraging its platform capabilities and integrations¹²³⁴.

NEW QUESTION # 200

Modules must have a Link type. Which one of the following is a list of Link types?

- A. List of Records, Separator, Catalog Type, Roles
- B. List of Records, Content Page, Order, URL (from arguments:)
- **C. Assessment, List of Records, Separator, Timeline Page**
- D. Assessment, List of Records, Content Page, Roles

Answer: C

Explanation:

Reference: https://docs.servicenow.com/bundle/geneva-servicenow-platform/page/administer/navigation_and_ui/reference/r_ModuleLinkTypes.html

A module is a navigation item that provides access to a feature or functionality in ServiceNow. Modules must have a link type, which determines how the module behaves when clicked. The following is a list of link types:

Assessment. This is a link type that opens an assessment, which is a survey or questionnaire that measures the effectiveness of a process or service.

List of Records. This is a link type that opens a list of records from a table or a saved filter.

Separator. This is a link type that creates a horizontal line to separate modules in the application menu.

Timeline Page. This is a link type that opens a timeline page, which is a graphical representation of the duration and sequence of events or tasks.

The following are not link types, but other module attributes or field types:

List of Records, Separator, Catalog Type, Roles. These are not link types, but a combination of a link type (List of Records), a module attribute (Separator), a field type (Catalog Type), and a user attribute (Roles).

List of Records, Content Page, Order, URL (from arguments:). These are not link types, but a combination of a link type (List of Records), a module attribute (Content Page), a field name (Order), and a link type argument (URL).

Assessment, List of Records, Content Page, Roles. These are not link types, but a combination of a link type (Assessment), a link type (List of Records), a module attribute (Content Page), and a user attribute (Roles). References: Modules, Create a Module

NEW QUESTION # 201

Which path would you take to access the table configuration page from a form?

- **A. The Form Context menu > Configure > Table**
- B. The Form Context menu > View > Table
- C. The Form Context menu > Configure > Dictionary
- D. The Form Context menu > View > Show Table

Answer: A

NEW QUESTION # 202

.....
