100% Pass 2026 Professional Google ChromeOS-Administrator Reliable Test Objectives

We boost the expert team to specialize in the research and production of the ChromeOS-Administrator guide questions and professional personnel to be responsible for the update of the study materials. We keep a close watch at the change of the popular trend among the industry and the latest social views so as to keep pace with the times and provide the clients with the newest ChromeOS-Administrator Study Materials resources. And clients are our gods and the clients' satisfaction with our ChromeOS-Administrator guide material is the biggest resource of our happiness. So why you still hesitated? Go and buy our ChromeOS-Administrator guide questions now.

Google Professional ChromeOS Administrator Exam Sample Questions (Q76-Q81):

NEW QUESTION # 76

You are setting up ChromeOS devices in a public library and need to prevent your ChromeOS devices from sleeping when not in use. How would you set up your policy to achieve this?

- A. In "Power management settings" set the policy to "Only allow users to turn off the device using the physical power button "
- B. In "User & Browser Settings" for Power and shutdown set the policy to "Do not allow wake locks "
- C. In "Power management settings" apply 'Do not allow device to sleep/shut down when idle on the sign- in screen "

- D. In "Managed Guest Session settings" set the maximum user session length to "unlimited "

Answer: C

Explanation:

This setting is specifically designed to prevent Chrome OS devices from sleeping or shutting down when they are not actively being used, but are on the sign-in screen. This is ideal for public environments like libraries where the devices are meant to be accessible at all times.

Other options are incorrect because:

- * B: This setting controls wake locks, which are used to keep a device awake under certain conditions. It doesn't directly control sleep behavior on the sign-in screen.
- * C: This setting controls how users can turn off the device, but doesn't prevent the device from sleeping on its own.
- * D: This setting controls the maximum length of a guest session, but doesn't affect the device's sleep behavior on the sign-in screen.

NEW QUESTION # 77

You have 150 Chrome Enterprise Upgrades (CEU) in your Google Admin console. You decide to purchase 20 Chromebook Enterprise devices (CBE). After enrollment, you would like to identify the type of licenses used by your devices. What should you do?

- A. Check directly from the device through the "About Chrome OS" page
- **B. From the "Device information" page, check the "Device Type" attribute content**
- C. Check from the device through chrome://policy
- D. Check your "Billing subscription" page to identify devices with CBE and CEU

Answer: B

Explanation:

To distinguish between Chrome Enterprise Upgrades (CEU) and Chromebook Enterprise (CBE) devices, go to the Device information page in the Admin console and check the "Device Type" attribute. This attribute clearly indicates whether the device has a CBE or CEU license.

Verified Answer from Official Source:

The correct answer is verified from the Google Chrome Enterprise Licensing Guide, which specifies how to identify device types based on licensing information.

"To check the licensing type, go to the Admin console, navigate to Devices > Chrome > Devices, and check the 'Device Type' attribute on the device information page." This method provides a clear distinction between devices with built-in licenses (CBE) and those upgraded with a separate license (CEU).

Objectives:

- * Identify license types for ChromeOS devices.
- * Efficiently manage device inventory and licensing.

NEW QUESTION # 78

You have been tasked with selecting a 3rd party IdP to allow logging into ChromeOS devices. Your ChromeOS devices are displaying an "Unable to sign in to Google" message. How should you troubleshoot this?

- A. Disable the SSO connection in the Google Admin console.
- B. Apply the SSO certificate to the ChromeOS device.
- C. Check Multi-Factor Authentication for the user account in the Google Admin console.
- **D. Ensure the identity provider is using an SAML compliant connection.**

Answer: D

Explanation:

The error message "Unable to sign in to Google" typically indicates an issue with the SAML configuration.

ChromeOS devices require the identity provider (IdP) to be SAML-compliant to function properly. Checking the SAML connection ensures that the IdP is properly configured to authenticate users when they log in.

Verified Answer from Official Source:

The correct answer is verified based on the Google Workspace Identity and Access Management Guide, which specifies that ChromeOS requires a SAML-compliant IdP for successful authentication.

"When setting up Single Sign-On (SSO) for ChromeOS devices, it is essential that the third-party IdP uses a SAML-compliant

connection to ensure compatibility and prevent login errors." If the IdP is not SAML-compliant, users will encounter login issues because ChromeOS devices rely on this protocol for authentication. Verifying and correcting the SAML configuration resolves the issue.

Objectives:

- * Implement third-party IdP for ChromeOS authentication.
- * Troubleshoot login issues related to SAML.

NEW QUESTION # 79

A ChromeOS Administrator has deployed ChromeOS devices in their organization. How can the company evaluate the compatibility with future updates following Google's best practices while still gaining access to new features when they launch?

- A. Set 5% of the organization across several departments on the 'Beta channel'1, and configure the rest of the fleet to receive auto updates on the 'Stable channel'
- B. Set the entire fleet to update in accordance with the 'Long-term Support (LTS) channel'
- C. Enable "Auto Updates" on all devices on the 'Stable channel*', but let the employees in the IT department run their devices on the 'Beta channel*' so they have time to evaluate and adapt the environment to each update before it reaches Stable
- D. Disable "Auto Updates" on all devices and let the admin test the newest release on the 'Stable channel' on their own device before rolling it out organization-wide

Answer: C

Explanation:

This approach balances access to new features with controlled testing. Here's how it works:

* Stable Channel: Most devices receive automatic updates on the Stable channel, ensuring security and stability for the majority of users.

* Beta Channel: IT staff use the Beta channel to access updates earlier, allowing them to identify and address potential issues before they affect the entire organization.

* Evaluation and Adaptation: IT staff can test compatibility, adjust configurations, and prepare for broader deployment based on their experience with the Beta channel.

Option B is incorrect because disabling auto-updates compromises security and delays access to new features.

Option C is incorrect because while a small beta group is useful, it might not be enough to cover all potential issues.

Option D is incorrect because the LTS channel focuses on stability, not early access to new features.

NEW QUESTION # 80

How would you deploy a Progressive Web Application to all managed user accounts?

- A. Go to "User & Browser Settings" and add the Progressive Web Application URL in the "Legacy Browser Support" site list
- B. Open "Additional Google services" to force-install the Progressive Web Application URL
- C. Force-install the Progressive Web Application URL in the "Chrome Apps & extensions" page
- D. Set up Chrome Imprivata shared apps & extensions to force-install the Progressive Web Application URL

Answer: C

NEW QUESTION # 81

.....

When we choose to find a good job, there is important to get the ChromeOS-Administrator certification as you can. There is a fabulous product to prompt the efficiency--the ChromeOS-Administrator exam prep, as far as concerned, it can bring you high quality learning platform to pass the variety of exams. Our product is elaborately composed with major questions and answers. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the ChromeOS-Administrator Test Question. Then, you will have enough confidence to pass it.
