What's more, part of that Itexamguide 2V0-15.25 dumps now are free: https://drive.google.com/open?id=1YLRXxj_L03SYR2UTNuOXma7uEbL04FY

Our 2V0-15.25 practice materials enjoy a very high reputation worldwide. This is not only because our practical materials are affordable, but more importantly, our 2V0-15.25 practice materials are carefully crafted after years of hard work and the quality is trustworthy. If you are still anxious about getting a certificate, why not try our 2V0-15.25 practice materials? If you have any questions about our practical materials, you can ask our staff who will give you help.

VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.
Topic 2	<ul style="list-style-type: none">IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.

Topic 3	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.
Topic 4	<ul style="list-style-type: none"> • VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.
Topic 5	<ul style="list-style-type: none"> • Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.

Real 2V0-15.25 PDF Questions [2026]-The Greatest Shortcut Towards Success

We offer you 2V0-15.25 study guide with questions and answers, and you can practice it by concealing the answers, and when you have finished practicing, you can cancel the concealment, through the way like this, you can know the deficient knowledge for 2V0-15.25 exam dumps, so that you can put your attention to the disadvantages. In addition, we also have the free demo for 2V0-15.25 Study Guide for you to have a try in our website. These free demos will give you a reference of showing the mode of the complete version. If you want 2V0-15.25 exam dumps, just add them into your card.

VMware Cloud Foundation 9.0 Support Sample Questions (Q41-Q46):

NEW QUESTION # 41

An administrator is tasked to add a new host to a vSphere cluster that was created with VMware vSAN Express Storage Architecture (ESA) as its principal storage in an existing workload domain.

The administrator successfully commissions the new host with a VMware vMotion only network pool but is unable to add the host to the existing cluster.

What must the administrator do to be able to complete this task?

- A. Decommission, reinstall ESX, and recommission the new host to the network pool for the existing vSAN ESA cluster.
- B. Reconfigure the currently associated network pool with a vSAN network.
- C. Manually configure the vSAN network on the new host within vCenter.
- **D. Change the network pool associated to the new host to the network pool for the existing vSAN ESA cluster.**

Answer: D

Explanation:

In VCF 9.0, when adding a host to a vSAN ESA-enabled cluster, the host must be commissioned with a network pool that includes a vSAN network configuration. Network pools define host-level networking templates for VCF, including management, vSAN, vMotion, and overlay networks. A host commissioned with a vMotion-only network pool does not have the required vSAN ESA network interfaces (vmk + NIC mapping) to join an ESA cluster.

Because the administrator successfully commissioned the new host but only using a vMotion-only network pool, VCF correctly prevents the host from being added to the ESA cluster.

The required action is:

Reassociate the host with the correct network pool that includes the vSAN ESA network.

Option A (reinstall ESXi) is unnecessary; commissioning workflows can be redone.

Option C (manual vCenter configuration) is explicitly unsupported-VCF manages host networking.

Option D (reconfiguring the existing pool) is not correct because the new host must be associated with the same network pool used by the existing ESA cluster, not change the pool definition itself.

Therefore, the precise and VMware-documented resolution is B.

NEW QUESTION # 42

An administrator determined that the VMware NSX admin password expired on their VMware NSX Edge Transport nodes. The

administrator manually resets the password in the console of each Edge Transport node.

What additional action is required to synchronize the new password in VMWare Cloud Foundation (VCF) Operations?

- A. In VCF Operations, update the admin password for each NSX Edge Transport node.
- B. In VCF Operations, sync the admin password for each NSX Edge Transport node.
- C. In VCF Operations, rotate the admin password for each NSX Edge Transport node.
- **D. In VCF Operations, remediate the admin password for each NSX Edge Transport node.**

Answer: D

Explanation:

In VMware Cloud Foundation 9.0, password changes made manually on an NSX Edge Transport Node are not automatically synchronized with VCF Operations. VCF Operations maintains secure credential records for all managed components, including NSX Manager appliances and NSX Edge Transport Nodes. When credentials become stale—such as after a password expiration and manual reset—VCF Operations marks the credential object as out of sync and requires administrative remediation.

The official workflow described in VCF 9.0 Operations documentation states that administrators must use the "Remediate Password" function whenever a password was changed outside of VCF Operations, ensuring that the platform revalidates and updates the stored credentials used for monitoring, log collection, and automation tasks. Options such as "rotate," "sync," or "update" do not apply because rotation implies generating a new password managed by VCF, and "sync" does not overwrite the stored credential. Only remediation forces VCF Operations to re-validate and align credentials with the external system.

Therefore, after manually resetting the NSX Edge admin password, the administrator must perform password remediation in VCF Operations to restore operational consistency, making B the correct and verified answer.

NEW QUESTION # 43

An administrator is planning to apply updates to a VMware vCenter instance.

What two actions can the administrator take to confirm the status of the vCenter services? (Choose two.)

- **A. Connect to the vCenter appliance shell and run the services-control -status command.**
- B. Connect to the vCenter appliance shell and run the vim-top command.
- **C. Connect to the vCenter Server Management console and review the services statuses.**
- D. Connect to the vSphere Client and review vCenter performance charts.
- E. Connect to the ESX DCUI where the vCenter Appliance is running and run the services.sh script.

Answer: A,C

Explanation:

Before applying updates to a vCenter Server Appliance (VCSA), an administrator must validate that all vCenter services are healthy. VMware provides two supported and documented methods for checking vCenter service status:

1. Using the vCenter Appliance Shell

Running the command:

```
services-control --status
```

This command displays the status of all vCenter-related services (vmdird, vmcad, vpxd, vsan-health, etc.). It is the authoritative diagnostic tool embedded in the appliance for confirming whether services are running, stopped, or in a degraded state. This method is explicitly documented in vSphere 9.0 service management procedures.

This matches Option B.

2. Using the vCenter Server Management Interface (VAMI)

Accessed at:

```
https://<vcenter-fqdn>:5480
```

The VAMI console provides a graphical interface under Services, showing the real-time health, status, and start/stop controls for all vCenter services. VMware documentation instructs administrators to review service status here before performing upgrades or maintenance operations.

This matches Option C.

Incorrect Options Explained

- * A. vSphere performance charts# These show workload data, not service health.
- * D. vim-top command# Displays vSphere hosts' runtime metrics, not vCenter services.
- * E. Running services.sh on ESXi DCUI# vCenter does not run ESXi services; this script is for ESXi hosts only.

NEW QUESTION # 44

An administrator is tasked with replacing a VMware vCenter certificate in VMware Cloud Foundation (VCF) Operations with an external CA-signed certificate. The certificate import completes successfully but when running the certificate replacement task, it fails with the following error: Certificate replacement has failed...

The Certificate Chain validation failed due to 'Signature does not match' What is the possible cause of this issue?

- A. The server certificate was copied to the wrong field.
- B. The external CA is not accessible to VCF Operations.
- C. The external CA is not trusted by VCF Operations.
- D. The Certificate Signing Request (CSR) included the IP address of the vCenter.

Answer: A

Explanation:

When replacing certificates in VMware Cloud Foundation (VCF) Operations, the system performs strict certificate chain validation. The error shown:

"Certificate chain validation failed due to 'Signature does not match'" indicates that VCF Operations attempted to validate the presented certificate chain but detected that the server certificate did not correctly match the signing CA certificate. This occurs most commonly when the administrator pastes the server certificate and CA root/intermediate certificates into the wrong fields during import.

VCF requires the certificate bundle to be uploaded in the correct format:

- * Server certificate# Server Certificate field
- * Intermediate certificates# Intermediate Chain field
- * Root certificate# Root CA field

If the chain order is wrong or the server certificate is mistakenly placed in an intermediate or root CA field, the cryptographic signature validation fails. This exact failure mode is documented in VMware certificate replacement workflows.

Option A is incorrect because including an IP address in a CSR does not invalidate chain signatures.

Option B is incorrect because an untrusted CA produces a trust failure, not a signature mismatch.

Option C is unrelated: accessibility is not required for certificate validation.

NEW QUESTION # 45

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:

- * The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.
- * VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.

The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.

The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.

What action must the administrator complete to resolve the issue?

- A. Deploy an additional VCF workload domain cluster.
- B. Deploy a new VCF workload domain.
- C. Add the SDDC Manager integration for the VCF instance.
- D. Trigger an inventory synch in VCF Operations fleet management.

Answer: C

NEW QUESTION # 46

.....

We can provide absolutely high quality guarantee for our 2V0-15.25 practice materials, for all of our 2V0-15.25 learning materials are finalized after being approved by industry experts. Without doubt, you will get what you expect to achieve, no matter your satisfied scores or according 2V0-15.25 certification file. As long as you choose our 2V0-15.25 exam questions, you will get the most awarded.
