Our Plat-Dev-301 learning materials help you to easily acquire the Plat-Dev-301 certification even if you have never touched the relative knowledge before. With our Plat-Dev-301 exam questions, you will easily get the favor of executives and successfully enter the gates of famous companies. You will have higher wages and a better development platform. What are you waiting for? Come and buy Plat-Dev-301 Study Guide now!

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q106-Q111):

NEW QUESTION # 106

A company has a Lightning page with many Lightning Components, some that cache reference data. It is reported that the page does not always show the most current reference data.

What can a developer use to analyze and diagnose the problem in the Lightning page?

- A. Salesforce Lightning Inspector Actions tab
- **B. Salesforce Lightning Inspector Storage tab**
- C. Salesforce Lightning Inspector Event Log tab
- D. Salesforce Lightning Inspector Transactions tab

Answer: B

Explanation:

The Storage tab in the Salesforce Lightning Inspector can be used to view and manage data stored on the client side, such as in the cache. This is useful for diagnosing issues related to stale or outdated cache data that may prevent the most current reference data from displaying.

NEW QUESTION # 107

A developer is creating a Lightning web component to display a calendar. The component will be used in multiple countries. In some locales, the first day of the week is a Monday, or a Saturday, or a Sunday. What should the developer do to ensure the calendar displays accurately for users in every locale?

- A. Import the `@salesforce/i18n` module and use the `firstDayOfWeek` internationalization property.
- B. Use `UserInfo.getLocale()` in the component.
- C. Use a custom metadata type to store key/value pairs.
- D. Query the `FirstDayOfWeek` field from the `Locale` for the current user.

Answer: A

Explanation:

Use the `@salesforce/i18n` module with the `firstDayOfWeek` property. It provides locale-aware functionality essential for internationalization.

NEW QUESTION # 108

Instead of waiting to send emails to support personnel directly from the finish method of a batch Apex process, Universal Containers wants to notify an external system in the event that an unhandled exception occurs.

What is the appropriate publish/subscribe logic to meet this requirement?

- A. Publish the error event using the `addError` method.
- B. Publish the error event using the `Eventbus.publish()` method.
- C. Publish the error event with a Flow.
- D. No publishing is necessary. Have the external system subscribe to the `BatchApexErrorEvent`.

Answer: D

Explanation:

Use `BatchApexErrorEvent` for notifications. It's automatically triggered for unhandled exceptions in batch Apex. No need for manual publishing. External systems can subscribe to this event to receive notifications.

NEW QUESTION # 109

Which three approaches should a developer implement to obtain the best performance for data retrieval when building a Lightning web component? Choose 3 answers

- A. Use `{Cacheable=true}` whenever possible
- B. Use the Lightning Data Service.
- C. Use lazy load for occasionally accessed data.
- D. Use `getRecordUi` to obtain metadata.
- E. Use `layoutTypes: 'Full'` to display a set of fields.

Answer: A,B,C

Explanation:

Lazy loading improves performance by loading data only when needed.

Lightning Data Service (LDS) handles data operations and caching efficiently.

Using `{Cacheable=true}` on Apex methods enables the Lightning Component framework to cache the method's return value, reducing server round-trips for the same data.

Lightning Web Components Developer Guide

NEW QUESTION # 110

A Salesforce org has more than 50,000 contacts. A new business process requires a calculation that aggregates data from all of these contact records. This calculation needs to run once a day after business hours. which two steps should a developer take to accomplish this?

Choose 2 answers

- A)
- B)
- C)
- D)

- A. Option C
- B. Option D
- C. Option A
- D. Option B

Answer: A,D

Explanation:

When dealing with large datasets and the need to perform complex calculations or data aggregation, batch Apex and scheduling are typically used to efficiently process records in batches and to execute the process during off-peak hours.

Option B is correct because using the `@future` annotation allows you to run methods in the background, but it is not suitable for operations that need to process more than 50,000 records, which is the governor limit for future methods.

Option C is correct because implementing the `Schedulable` interface allows you to schedule the class to run at specified times, such as after business hours, which is a requirement for this scenario.

Option A is incorrect because `Queueable` is typically used for chaining jobs and handling asynchronous processing of individual transactions, not for processing large datasets at scheduled times.

Option D is incorrect because the `Database.Batchable` interface is what's needed for processing large datasets, not `Database.Stateful`. The `Database.Stateful` interface is used to maintain state across batch job transactions.
