PDII-JPN - The Best Quiz

Our PDII-JPN exam quiz is unlike other exam materials that are available on the market, our PDII-JPN study dumps specially proposed different versions to allow you to learn not only on paper, but also to use mobile phones to learn. This greatly improves the students' availability of fragmented time. So you can achieve your PDII-JPN Certification easily without disrupting your daily routine. And we will give you 100% success guaranteed on the PDII-JPN training guide.

Salesforce Sample Questions (Q103-Q108):

NEW QUESTION # 103

開発者は「最大トリガー深度を超えました」というエラーを受け取ります。
このエラーメッセージが表示される原因としては何が考えられますか？

- A. トリガーが 16 回以上再帰的に呼び出されます。
- B. フロートリガーの組み込みが多すぎます。
- C. トリガー ロジックには多数の DML 操作があります。
- D. SOQL ガバナ制限に達しています。

Answer: A

NEW QUESTION # 104

Apex トリガと Apex クラスは、ケースが変更されるたびにカウンタ Edit__C をインクリメントします。

- A. ☐
- B. ☐
- C. ☐
- D. ☒

Answer: D

Explanation:

Based on the trigger and class code, the change that should be made to the test method is option C. This option adds the Test.startTest() and Test.stopTest() methods to the test method, and moves the delete statement and the second query inside the Test.startTest() and Test.stopTest() block. This way, the test method can force the asynchronous @future method to execute and update the Edit__c field before the assertion. Option A would not work, as it does not use the Test.startTest() and Test.stopTest() methods to wait for the @future method to finish. Option B would not work, as it uses the Test.startTest() and Test.stopTest() methods incorrectly, and does not move the delete statement and the second query inside the block. Option D would not work, as it does not use the Test.startTest() and Test.stopTest() methods at all, and also changes the assertion to an incorrect value. Reference: [Testing Asynchronous Apex], [Test Class]

NEW QUESTION # 105

大量のデータを含むオブジェクトに対してクエリを実行すると、開発者が「SOQL クエリの選択が不十分です」という例外を受け取ります。

を。問題を解決するには、どの手順を実行する必要がありますか？

- A. REST API への呼び出しを介して SOQL クエリを実行します。
- B. SOQL クエリの WHERE 句で ID を使用します。
- C. SOQL クエリを非同期プロセス内に移動します。
- D. FOR ループの一部として SOQL クエリを実行します。

Answer: B

NEW QUESTION # 106

開発者は、Salesforce からデータを取得してレコードプロパティに割り当てる Lightning Web コンポーネントを構築しています。

JavaScript

'lwc' から { LightningElement, api, wire } をインポートします。

'lightning/uiRecordApi' から { getRecord } をインポートします。

エクスポートのデフォルトクラス Record は LightningElement を拡張します {

@api フィールド;

@api レコードID;

記録;

}

Salesforce からデータを取得するには、コンポーネントで何を行う必要がありますか？

- A. レコードの上に @wire(getRecord, { recordId: '\$recordId', fields: '\$fields' }) を追加します。
- B. レコードの上に @api(getRecord, { recordId: '\$recordId', fields: '\$fields' }) を追加します。
- C. 上記のレコードに @api(getRecord, { recordId: '\$recordId' }) を追加します。
- D. レコードの上に @wire(getRecord, { recordId: '\$recordId' }) を追加します。

Answer: A

Explanation:

To retrieve record data in a Lightning Web Component using the Lightning Data Service (LDS), the developer must use the @wire decorator with the getRecord wire adapter.

Option D provides the correct syntax. The @wire decorator requires the adapter name (getRecord) and a configuration object. The configuration must include the recordId and either the fields or layoutTypes to be retrieved. By using the \$ prefix (e.g., '\$recordId'), the developer makes the property "reactive." This means that whenever the value of recordId or fields changes, the wire service automatically re-provisions the data from Salesforce.

Options A and C are incorrect because @api is used to expose public properties, not for wiring data. Option B is incorrect because getRecord requires a field list or layout type to know which data points to fetch from the server. Using the reactive \$fields ensures that the component remains flexible and can load different field sets as defined by its parent component.

NEW QUESTION # 107

Universal Containers は、Apex バッチプロセスの終了メソッドから直接サポート担当者にメールを送信するのを待つのではなく、未処理の例外が発生した場合に外部システムに通知したいと考えています。

この要件を満たす適切なパブリッシュ/サブスクライブ ロジックは何ですか？

- A. 公開する必要はありません。外部システムに **BatchApexErrorEvent** をサブスクライブさせます。
- B. addError メソッドを使用してエラー イベントを発行します。
- C. エラー イベントをフローで発行します。
- D. イベントバスを使用してエラー イベントを発行します。public()メソッド。

Answer: A

Explanation:

Use BatchApexErrorEvent for notifications. It's automatically triggered for unhandled exceptions in batch Apex. No need for manual publishing. External systems can subscribe to this event to receive notifications. References: Batch Apex

NEW QUESTION # 108

.....

So rest assured that with the Actual4Cert (PDII-JPN) practice questions you will not only make the entire Salesforce PDII-JPN exam dumps preparation process and enable you to perform well in the final (PDII-JPN) certification exam with good scores. To provide you with the updated (PDII-JPN) exam questions the Actual4Cert offers three months updated (PDII-JPN) exam dumps download facility. Now you can download our updated PDII-JPN practice questions up to three months from the date of Actual4Cert (PDII-JPN) exam purchase.
