- Demonstrate an understanding of core AWS services, uses, and basic AWS architecture best practices
- Demonstrate proficiency in developing, deploying, and debugging cloud-based applications using AWS

## Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q24-Q29):

NEW QUESTION # 24

When you register an activity in Amazon SWF, you provide the following information, except:

- A. version
- B. timeout values
- **C. a domain**
- D. a name

**Answer: C**

Explanation:

When designing an Amazon SWF workflow, you precisely define each of the required activities. You then register each activity with Amazon SWF as an activity type. When you register the activity, you provide information such as a name and version, and some timeout values based on how long you expect the activity to take.

#### NEW QUESTION # 25

A developer is building a highly secure healthcare application using . . application requires writing temporary data to /tmp storage on an AWS Lambda function.

How should the developer encrypt this data?

- **A. Use an on-premises hardware security module (HSM) to generate keys where the Lambda function requests a data key from the HSM and uses that to encrypt data on all requests to the function**
- B. Enable Amazon EBS volume encryption with an AWS KMS . . configuration so that all storage attached to the Lambda function is encrypted.
- C. Set up the Lambda function with a role and key policy to access an AWS KMS CMK Use the CMK to generate a data key used to encrypt all data prior to writing to /tmp storage
- D. Use OpenSSL to generate a symmetric encryption key on Lambda startup Use this key to encrypt the data prior to writing to /tmp

**Answer: A**

#### NEW QUESTION # 26

A Developer is leveraging a Border Gateway Protocol (BGP)-based AWS VPN connection to connect from on-premises to Amazon EC2 instances in the Developer's account. The Developer is able to access an EC2 instance in subnet A, but is unable to access an EC2 instance in subnet B in the same VPC.

Which logs can the Developer use to verify whether the traffic is reaching subnet B?

- **A. VPC Flow Logs**
- B. AWS CloudTrail logs
- C. VPN logs
- D. BGP logs

**Answer: A**

#### NEW QUESTION # 27

A Developer is creating an Auto Scaling group whose instances need to publish a custom metric to Amazon CloudWatch.

Which method would be the MOST secure way to authenticate a CloudWatch PUT request?

- A. Modify the CloudWatch metric policies to allow the PutMetricData permission to instances from the Auto Scaling group.
- B. Create an IAM user with PutMetricData permission, and modify the Auto Scaling launch configuration to inject the user credentials into the instance user data.
- C. Create an IAM user with PutMetricData permission and put the user credentials in a private repository; have applications pull the credentials as needed.
- **D. Create an IAM role with PutMetricData permission and modify the Auto Scaling launching configuration to launch instances using that role.**

**Answer: D**
