Using our National Council Licensure Examination(NCLEX-RN) (NCLEX-RN) practice test software, you can prepare for the increased difficulty on National Council Licensure Examination(NCLEX-RN) (NCLEX-RN) exam day. Plus, we have various question types and difficulty levels so that

you can tailor your National Council Licensure Examination(NCLEX-RN) (NCLEX-RN) exam dumps preparation to your requirements.

Passing the NCLEX-RN exam is a crucial step in becoming a licensed RN in the United States. NCLEX-RN exam is designed to test a nurse's ability to provide safe and effective patient care, and passing the exam demonstrates that the nurse has met the minimum standard of competency required to practice as a registered nurse. The NCLEX-RN Exam is challenging, but with proper preparation and study, nurses can increase their chances of passing the exam and beginning their careers as registered nurses.

## **NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q751-Q756):**

### **NEW QUESTION # 751**

A client hospitalized with a medical diagnosis of adjustment disorder versus personality disorder states, "Nobody cares about the clients." The nurse's most effective response would be:

- A. "You seem angry. Tell me more about how you feel."
- B. "How can you say that I don't care? We just met."
- C. "What makes you think the nurses don't care?"
- D. "You will feel differently about us in a few days."

**Answer: A**

Explanation:

Section: Questions Set G

Explanation:

(A) This statement is a defensive response that places the nurse in a vulnerable countertransference position, and at the same time, fails to challenge the client's "splitting" behavior. (B) This statement is a defensive response by the nurse. In addition, this type of nontherapeutic statement requests that the client explains the reasons for her behavior, a difficult task for an individual with limited insight. (C) This statement is a nontherapeutic response that both ignores the intensity of the client's emotions and the dynamics underlying "splitting" behavior. (D) By simultaneously acknowledging the client's emotional intensity and gently challenging her "splitting" behavior, the nurse addresses the client's current distortions and prepares for further interventions with angry or ambivalent feelings.

### **NEW QUESTION # 752**

A client at 9 weeks' gestation comes for an initial prenatal visit. On assessment, the nurse discovers this is her second pregnancy. Her first pregnancy resulted in a spontaneous abortion. She is 28 years old, in good health, and works full-time as an elementary school teacher. This information alerts the nurse to which of the following:

- A. The need for teaching regarding family planning
- B. **The need for anticipatory guidance regarding the pregnancy**
- C. An increased risk in maternal adaptation to pregnancy
- D. An increased risk for subsequent abortions

**Answer: B**

Explanation:

(A, D) There are no data to support this. (B) Anticipatory guidance and health maintenance is a first-line defense in the promotion of healthy mothers and healthy babies. (C) There are no data to support this at this time. This will be a concern later.

### **NEW QUESTION # 753**

During a client's first postpartum day, the nurse assessed that the fundus was located laterally to the umbilicus. This may be due to:

- A. Displacement due to bowel distention
- B. Endometritis
- C. **Urine retention or a distended bladder**
- D. Fibroid tumor on the uterus

**Answer: C**

Explanation:

Explanation/Reference:

Explanation:

(A, B) Endometritis, urine retention, or bladder distention provide good distractors because they may delay involution but do not usually cause the uterus to be lateral. (C) Bowel distention and constipation are common in the postpartum period but do not displace the uterus laterally. (D) Urine retention or bladder distention commonly displaces the uterus to the right and may delay involution.

#### NEW QUESTION # 754

Discharge teaching was effective if the parents of a child with atopic dermatitis could state the importance of:

- A. Wrapping hands in soft cotton gloves
- B. Showering 3-4 times a day
- C. Maintaining a high-humidified environment
- D. Furry, soft stuffed animals for play

**Answer: A**

Explanation:

Explanation

(A) Maintaining a low-humidified environment. (B) Avoiding furry, soft stuffed animals for play, which may increase symptoms of allergy. (C) Avoiding showering, which irritates the dermatitis, and encouraging bathing

4 times a day in colloid bath for temporary relief. (D) Wrapping hands in soft cotton gloves to prevent skin damage during scratching.

#### NEW QUESTION # 755

On admission to the inpatient unit, a 34-year-old client is able to follow simple directions, but with great difficulty.

He is worried about how he can keep clean in such a public place and repeatedly dusts his bureau, straightens his bed, and adjusts the clothes in his closet. The client is experiencing a severe level of anxiety. Which response by the nurse would be most therapeutic in initially attempting to reduce his anxiety?

- A. "You will not be allowed to remain in your room if you continue to bother things."
- B. "I can see how uncomfortable you are, but I would like you to walk with me so I can show you around the unit."
- C. "Tell me why your room needs to be so clean."
- D. "I've inspected this room and it is perfectly clean."

**Answer: B**

Explanation:

Section: Questions Set D

Explanation:

(A) This statement is punitive. (B) Acknowledging the anxiety and channeling it into some positive activity is therapeutic. (C) The client cannot say "why"; this statement puts the client on the defensive. (D) A rational approach, especially a judgmental one, is non-therapeutic.
