CompTIA SecAI+ Certification Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

A human resources officer is using AI to evaluate resumes and help select candidates that meet minimum criteria. To improve the results, the human resources officer adjusts the query parameters and includes an example resume that matches a successful candidate. Which of the following best describes this query?

- A. Prompt template
- B. System role
- C. Distillation
- D. One-shot prompting

Answer: D

Explanation:

One-shot prompting provides the model with a single example (in this case, a successful resume) to guide how it should process future inputs. This technique helps the AI better align its output with the desired evaluation criteria.

NEW QUESTION # 17

A penetration tester is assessing the controls of a deployed AI system that is designed to search and return the contents of files. The tester runs the following:

```
#!/usr/bin/env python3
import requests
cmd = ['deleteBuckets', 'getObjects', 'listAcl', 'listPermissions']
url = 'https://myapp.local.dev/locate?file_id="foo.txt";param_1='
count = 0

for i in cmd:
    response = requests.get(url + i)
    if '200' in response:
        #print(str(response))
        count = count + 1
print(## + ' ' + count + ' ' + ##)

SCRIPT OUTPUT: ## 4 ##
```

Which of the following is the best control to prevent abuse of the system?

- A. Adding a large language model (LLM) guardrails library to the application code
- B. Segmenting the workload into a separate virtual private cloud (VPC)
- C. Reducing the privilege scope of the service account
- D. Implementing custom detection rules for anomalous model behavior

Answer: C

Explanation:

The penetration test shows that the system accepts arbitrary commands like deleteBuckets or listPermissions, which could lead to privilege abuse. The most effective control is least privilege, ensuring the service account only has access to what is strictly necessary (e.g., reading files) and not sensitive operations like deleting buckets or altering permissions.

NEW QUESTION # 18

A web server shows signs of SQL injection. Which control BEST prevents this?

- A. SSL encryption
- B. Account lockout

- C. Runtime application self-protection (RASP)
- **D. Input validation**

Answer: D

Explanation:

Validating and sanitizing user input is the core SQLi defense.

NEW QUESTION # 19

Which of the following is used to train an AI model with unstructured data?

- A. Statistical learning
- B. Supervised learning
- **C. Fine-tuning**
- D. Reinforcement training

Answer: C

Explanation:

Fine-tuning allows an AI model to adapt to unstructured data (such as text, audio, or images) by retraining it on domain-specific datasets. This process improves the model's ability to handle and generate outputs aligned with the unstructured data context.

NEW QUESTION # 20

Users report that the output of a generative AI application seems unrelated to the prompts and contains offensive content. A security team investigates and determines that there was an on-path attack. Which of the following is the most likely attack method?

- A. Domain hijacking
- B. Model hijacking
- **C. Session hijacking**
- D. Application server hijacking

Answer: C

Explanation:

In an on-path attack, an adversary intercepts and manipulates traffic between the user and the AI system. Session hijacking allows the attacker to inject or alter prompts and responses, leading to unrelated or offensive output.
