CompTIA A+ Certification Exam: Core 2 Sample Questions (Q723-Q728):

NEW QUESTION # 723
A user is experiencing frequent malware symptoms on a Windows workstation. The user has tried several times to roll back the state but the malware persists. Which of the following would MOST likely resolve the issue?

- A. Disabling TLS 1.0 support

- B. Reimaging the workstation
- C. Quarantining system files
- D. Encrypting the hard drive

Answer: D

Explanation:
Explanation
Encrypting the hard drive would most likely resolve the issue

NEW QUESTION # 724
An executive has contacted you through the help-desk chat support about an issue with a mobile device.
Assist the executive to help resolve the issue.

Which of the following should be done NEXT?

- A. Educate the user on the solution that was performed.
- B. Send an email to Telecom to inform them of the Issue and prevent reoccurrence.
- C. Tell the user to take time to fix it themselves next time.
- D. Close the ticket out.

Answer: A

NEW QUESTION # 725
While testing a new computer, a technician hears a loud buzzing sound, smells smoke, and sees a flame inside the power supply. Which of the following actions should the technician take first?

- A. Disconnect the power cord from the wall outlet.
- B. Turn off the power supply switch.
- C. Extinguish the fire with water.
- D. Smother the fire by replacing the system case.

Answer: A

NEW QUESTION # 726
Which of the following is a consequence of end-of-lite operating systems?

- A. Operating systems are unable to migrate data to the new operating system.
- B. Operating systems void the hardware warranty.
- C. Operating systems no longer receive updates.
- D. Operating systems cease to function.

Answer: C

Explanation:
End-of-life operating systems are those which have reached the end of their life cycle and are no longer supported by the software developer. This means that the operating system will no longer receive updates, security patches, or other new features. This can leave users vulnerable to security threats, as the system will no longer be protected against the latest threats. Additionally, this can make it difficult to migrate data to a newer operating system, as the old system is no longer supported.

NEW QUESTION # 727
Users access files in the department share. When a user creates a new subfolder, only that user can access the folder and Its files. Which of the following will MOST likely allow all users to access the new folders?

- A. Removing archive attribute
- B. Assigning share permissions
- C. Requiring multifactor authentication
- D. Enabling inheritance

Answer: D

Explanation:
Explanation
Enabling inheritance is a method that allows new subfolders to inherit the permissions and settings from their parent folder. If users can access files in the department share, but not in the new subfolders created by other users, it may indicate that inheritance is disabled and that each new subfolder has its own permissions and settings that restrict access to only the creator. Enabling inheritance can help resolve this issue by allowing all users to access the new subfolders with the same permissions and settings as the department share. Assigning share permissions, requiring multifactor authentication, and removing archive attribute are not methods that can most likely allow all users to access the new folders.

NEW QUESTION # 728
