CompTIA A+ Certification Exam: Core 1 Sample Questions (Q77-Q82):

NEW QUESTION # 77

A technician receives a S.M.A.R.T. error on a PC. When the technician presses the Esc key, the PC continues to turn on without any further issues. Which of the following should the technician do next?

- A. Change the NIC.
- B. Close the ticket.
- C. Update the PC's BIOS.
- **D. Replace the HDD.**

Answer: D

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

S.M.A.R.T. (Self-Monitoring, Analysis, and Reporting Technology):

S.M.A.R.T. is a monitoring system integrated into modern HDDs and SSDs that detects and reports on various indicators of drive

health and reliability.

A S.M.A.R.T. error indicates that the drive is showing signs of impending failure, even if the PC continues to boot and work normally for the time being.

Next Steps:

The appropriate action is to replace the hard drive (HDD) because a S.M.A.R.T. error is an early warning of possible hardware failure. Ignoring the warning could result in data loss if the drive fails completely.

The technician should also back up the user's data immediately to avoid losing critical information.

Incorrect Options:

B: Update the PC's BIOS: While keeping the BIOS updated is a good practice, it does not address the S.M.A.

R.T. error, which is specific to the HDD.

C: Close the ticket: Closing the ticket without resolving the issue would be improper, as the S.M.A.R.T. error is a hardware problem that needs to be addressed to prevent future data loss or downtime.

D: Change the NIC: The NIC (Network Interface Card) is unrelated to the storage system and would not resolve a S.M.A.R.T. error.

Key Takeaway:

A S.M.A.R.T. error is a critical indicator of HDD health issues, and the drive should be replaced as soon as possible. Backing up data is also essential.

NEW QUESTION # 78

An end user reports that their laptop has a blank screen. A technician observes the keyboard lights are on, and the fan is running. Which of the following should the technician do next?

- A. Check the display ribbon cable.
- B. Contact vendor support
- **C. Connect to an external monitor**
- D. Replace the inverter

Answer: C

Explanation:

When a laptop powers on but the screen is blank, the quickest way to isolate the problem is to connect to an external monitor. This helps determine if the issue is with the laptop display or with the graphics subsystem.

From CompTIA A+ 220-1101 Official Study Guide, Objective 4.1 - Troubleshoot common hardware problems:

"A blank screen on a laptop with power indicators lit should be tested with an external display first to rule out a faulty screen or ribbon cable." Verified Source:

NEW QUESTION # 79

A help desk technician needs to work on a high-volume printer. Users have reported occasional paper jams and smudges appearing on printed documents. Which of the following steps should the technician do next to address these issues?

- A. Perform a full factory reset.
- **B. Check and clean the rollers.**
- C. Replace the fuser.
- D. Change all the ink or toner cartridges.

Answer: B

Explanation:

Paper jams and smudging in high-volume printers are often caused by dirty or worn rollers. Rollers are responsible for feeding the paper through the printer. Over time, they accumulate dust, toner residue, or wear out, resulting in misfeeds or jams. Cleaning or replacing them typically resolves this issue.

Option A (Factory reset): A full reset does not directly address mechanical issues like dirty rollers or smudging. It's a last resort and more relevant to configuration or software-related issues.

Option C (Change toner cartridges): While toner quality can affect print quality, it won't usually cause jams or widespread smudging unless the cartridge is leaking - which is less likely across multiple users.

Option D (Replace the fuser): A damaged fuser could cause smudging, but this is typically after extensive use and is not the first thing

to check. Fuser issues also usually present more persistent, uniform smudges.

NEW QUESTION # 80

A customer reports that a text-only document prints with unrecognizable characters. The print preview correctly displays the document. Which of the following is the most likely cause of the issue?

- A. Outdated firmware
- B. Corrupted document file
- C. Bad toner cartridge
- D. Incorrect driver

Answer: D

NEW QUESTION # 81

Which of the following networking devices will most likely need to be installed in between the ISP running DOCSIS and the LAN in a SOHO environment?

- A. Access point
- B. Firewall
- C. Switch
- D. Cable modem
- E. Router

Answer: D

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

To determine the correct device, we need to understand how a DOCSIS (Data Over Cable Service Interface Specification) network functions in a Small Office/Home Office (SOHO) environment:

C:Cable Modem:

A cable modem is required to convert the signal provided by the ISP (Internet Service Provider) over a DOCSIS network into a format that is usable by the local area network (LAN).

DOCSIS is a standard for high-speed internet over cable television infrastructure, and the cable modem acts as the gateway between the ISP's coaxial network and the LAN.

Without the cable modem, devices in the LAN would not be able to access the internet.

Reference: CompTIA A+ Core 1 Exam Objectives (220-1201), Domain 2.2 - Compare and contrast Internet connection types, network types, and their features.

Incorrect Options:

A:Switch:

A switch is used to connect multiple devices within the LAN. It does not connect the LAN to the ISP's DOCSIS network.

B:Firewall:

While firewalls provide security by managing inbound and outbound traffic, they do not serve as the interface between the ISP and LAN.

D:Router:

A router directs traffic between different networks (e.g., between a LAN and the internet). However, in a DOCSIS network, the cable modem is the device that first connects to the ISP. Many modern cable modems also include built-in routers, but the modem is the primary device needed.

E:Access Point:

An access point provides wireless connectivity within the LAN. It does not connect directly to the ISP or handle DOCSIS signals.

Key Takeaway:The correct device required to interface between the ISP's DOCSIS network and the SOHO LAN is the cable modem.
